

Supplemental Figure 1. Kaplan-Meier curve for overall survival by age at diagnosis (left & middle); Kaplan-Meier curve for overall survival by metastasis at diagnosis (right), all for combined analysis of European and Brazilian populations.

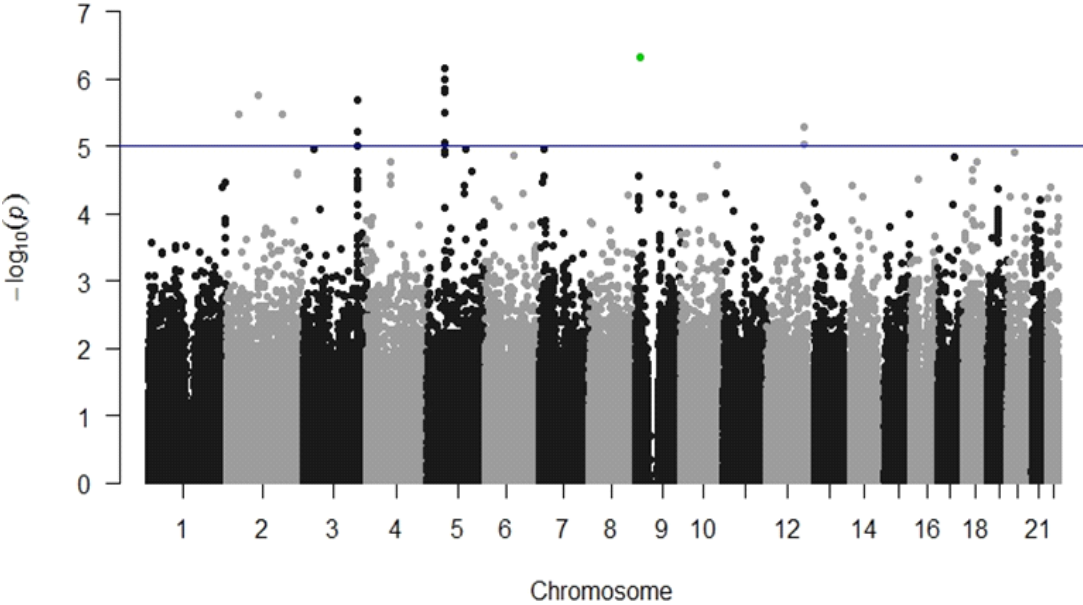

Supplemental Figure 2. QQ plot (left) and Manhattan plot (right) for association with overall survival in the European set. The strongest SNP after the meta-analysis of the European and Brazilian sets is shown in green.

QQ plot for overall survival

Manhattan plot for overall survival

Supplemental Figure 3. eQTL plot for rs55933544 and *IL33* expression (left) and Kaplan-Meier curve (right) for survival per *IL33* expression.
