

Supplemental Figure 4. Average levels of total thyroxine (TT4) and total triiodothyronine (TT3) from the serum of dams during gestation (GD 18) or lactation (PND 21) and in serum from male and female pups (PND 21). A significant effect of exposure was only found for TT3 in dams exposed to the lowest dose during lactation (A). Graphs depict mean \pm SEM (* $p \leq 0.05$).
