

A**B**

Figure S2. Long periods of incubation with gentamicin post-phagocytosis can affect *S. gordonii* survival.

(A) Human monocyte derived macrophages or (B) RAW264.7 mouse macrophages were incubated with gentamicin to prevent growth of non-phagocytosed DL1 *S. gordonii* for 30 minutes of the two hour post-phagocytosis incubation (30 min) or for the full two hour post-phagocytosis incubation (120 min). Shown is mean +/- standard error of 4-8 independent experiments.
