

Figure S1. *HnRNP DL* exon 8 alone does not influence luciferase expression. Luciferase activity of e8 (*hnRNP DL* exon 8) and e8+20nt (*hnRNP DL* exon 8 plus 20 nt of the flanking exons 7 and 9) after overexpression of *hnRNP DL* (DL) or GFP (GFP) as a control. Firefly luciferase activity was normalized to *Renilla* luciferase as an internal control. Values are normalized to an empty vector control, without *hnRNP DL* 3'UTR sequences. n = 3.
