

Additional File 1

Figure S1. Risk for CFS in the subset of females <45 years old (n=78) using cut-off based on the mean T/S ratio (1.2324) of the NF group in this subset (CFS, n=22 and NF, n=56). Values shown with each bar represents the number of participants with corresponding percentage of participants in the Y-axis based on the indicated cut-off.
