

Supplemental Figure 2. AChE protein level and activity in MCF-7 cells after C10 treatment.  
 (A) Representative western blot of AChE protein level in control MCF-7 cells and treated with C10 for the indicated time.  
 (B) AChE activity in MCF-7 cells, homogenate of these cells or erythrocyte lysate treated with IC50 dose of C10. Graph represents mean value from 2 independent experiments.
