

Figure S5. Lack of $[PSI^+]$ nucleation by Sup35N-PrP90-119 chimera in the yeast $[pin^-]$ strain. Images from $-Ade$ plates are shown, obtained without (left column) or with (right column) pre-incubation in the presence of additional (100 μ M) $CuSO_4$. Sup35N-PrP90-230 (capable of nucleating $[PSI^+]$) and Sup35N-PrP120-230 (not capable of nucleating $[PSI^+]$) constructs, as well as Sup35N (negative control) are included for the comparison.
