

THE LANCET

Gastroenterology & Hepatology

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed.
We post it as supplied by the authors.

Supplement to: Scally B, Emberson JR, Spata E, et al. Effects of gastroprotectant drugs for the prevention and treatment of peptic ulcer disease and its complications: a meta-analysis of randomised trials. *Lancet Gastroenterol Hepatol* 2018; published online Feb 20. [http://dx.doi.org/10.1016/S2468-1253\(18\)30037-2](http://dx.doi.org/10.1016/S2468-1253(18)30037-2).

Effects of gastropredictants for the prevention and treatment of peptic ulcer disease and its complications: meta-analysis of randomised trials

Box. Definitions of study outcomes used in the meta-analysis

Trial population	Outcome	Summary of trialists' definitions
Prevention	Endoscopic ulcers	Lesions ≥ 5 mm (or ≥ 3 mm in older studies). Perception of 'depth' within lesion at endoscopy.
	Symptomatic ulcers	Any subjective clinical symptoms that a clinician may associate with peptic ulcer disease. Commonly described symptoms were dyspepsia or epigastric pain.
	Bleeding	Based on a range of clinical, biochemical and endoscopic parameters.
	Perforation	Based on clinical assessment, usually including imaging with erect chest x-ray.
	Obstruction	Based on clinical assessment.
	All-cause mortality	Death from any cause
Healing	Endoscopic ulcer healing	Endoscopic evidence of complete healing. Changes of scarring and mucosal regeneration were accepted as evidence of healing.
	All-cause mortality	Death from any cause
Acute UGI bleeding treatment	Further bleeding	Failure to establish initial haemostasis or any episode of upper gastrointestinal bleeding that occurred after initial haemostasis was established
	Blood transfusion	Any requirement for patients to receive red blood cell transfusion
	Endoscopic interventions	Any further endoscopic interventions that were performed after initial haemostasis was established
	Surgery	Any surgical interventions that were performed after initial haemostasis was established
	All-cause mortality	Death from any cause

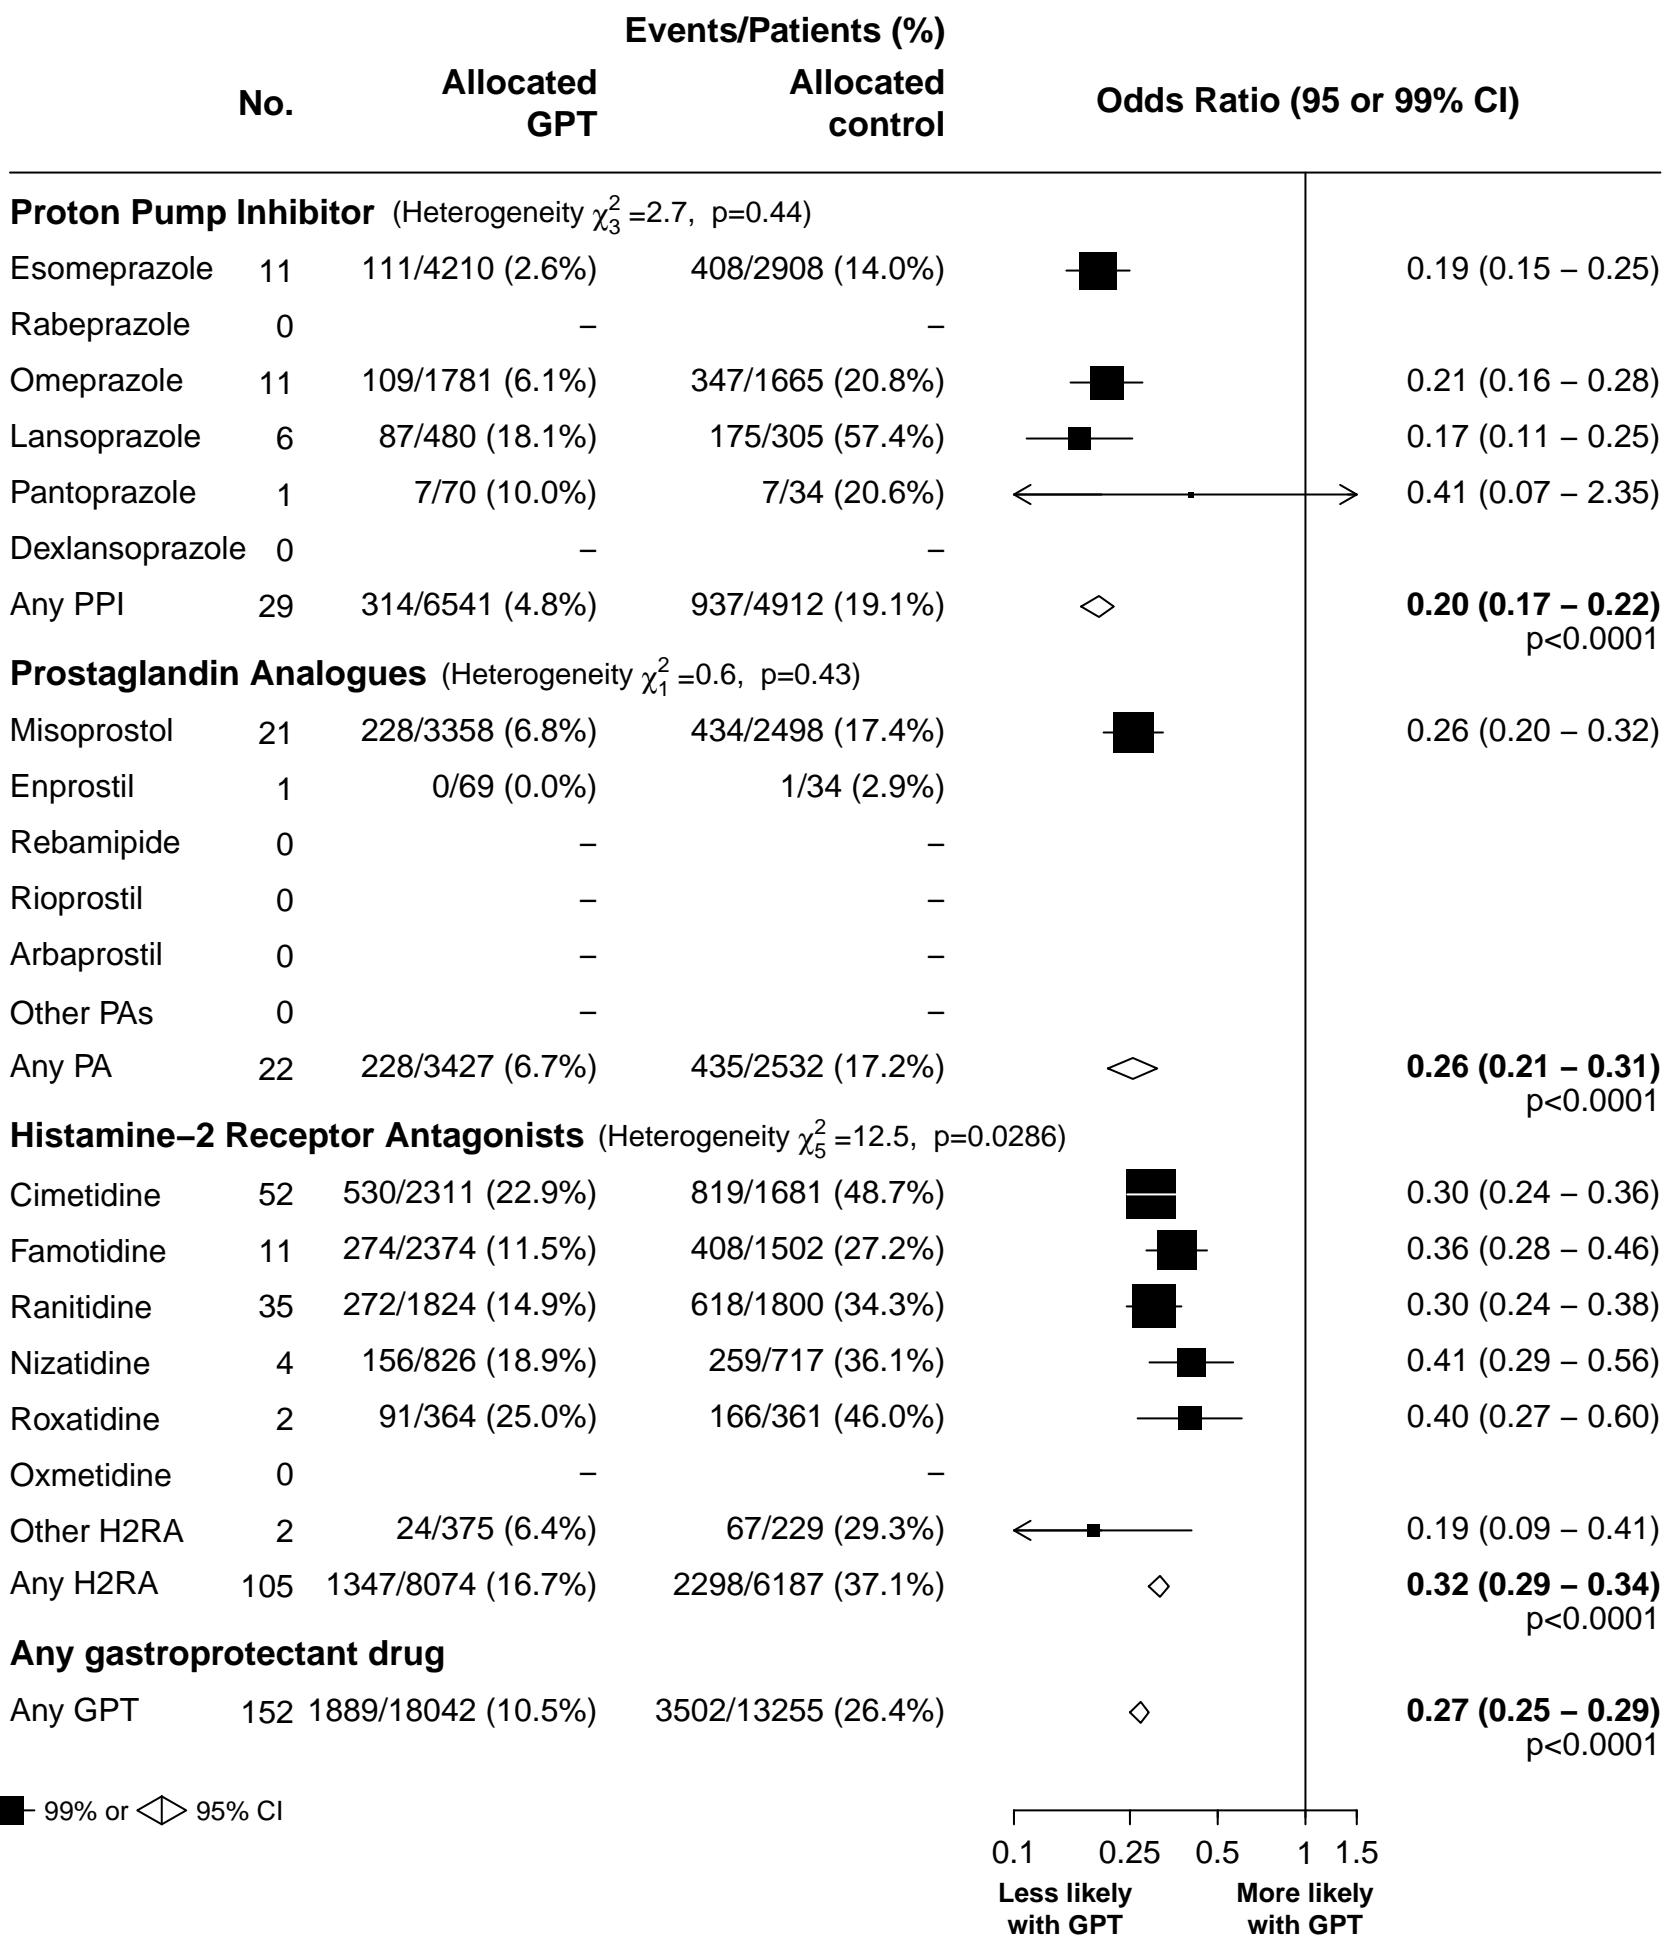

Webfigure 1: Prevention trials – comparison of gastroprotectants on any endoscopic ulcer

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists

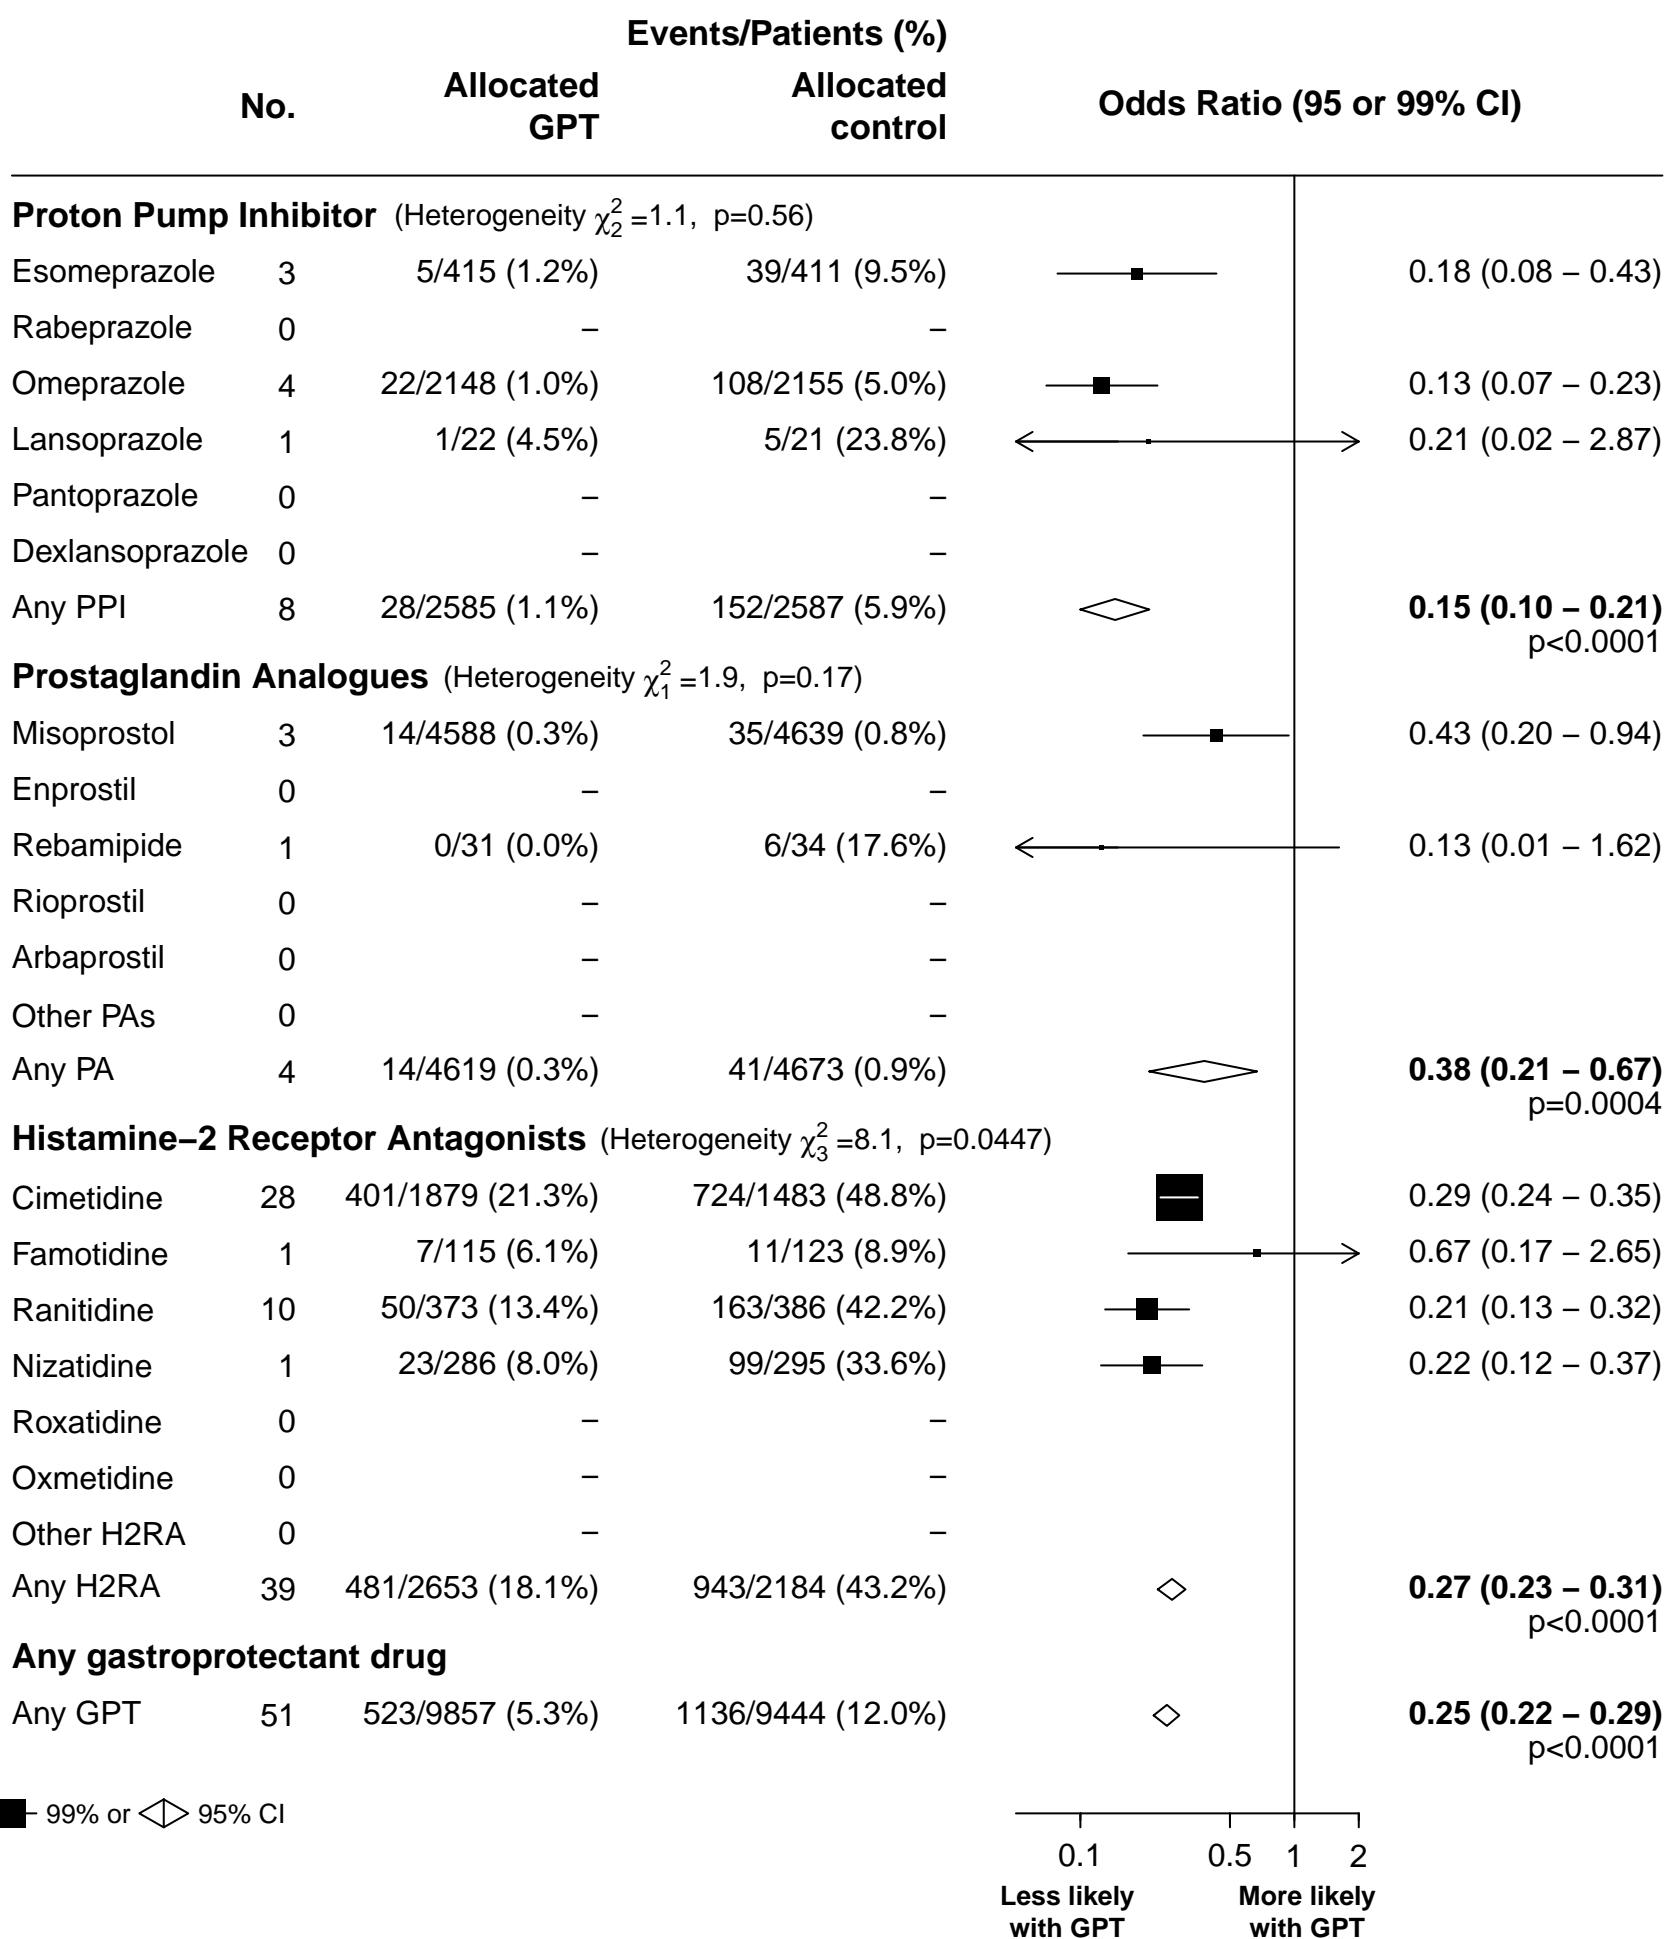

There was one trial comparing PA + H2RA versus H2RA (misoprostol + ranitidine vs ranitidine) with 3/25 vs 14/28 endoscopic ulcers.

Webfigure 2: Prevention trials – effects of gastroprotectants on any endoscopic ulcer

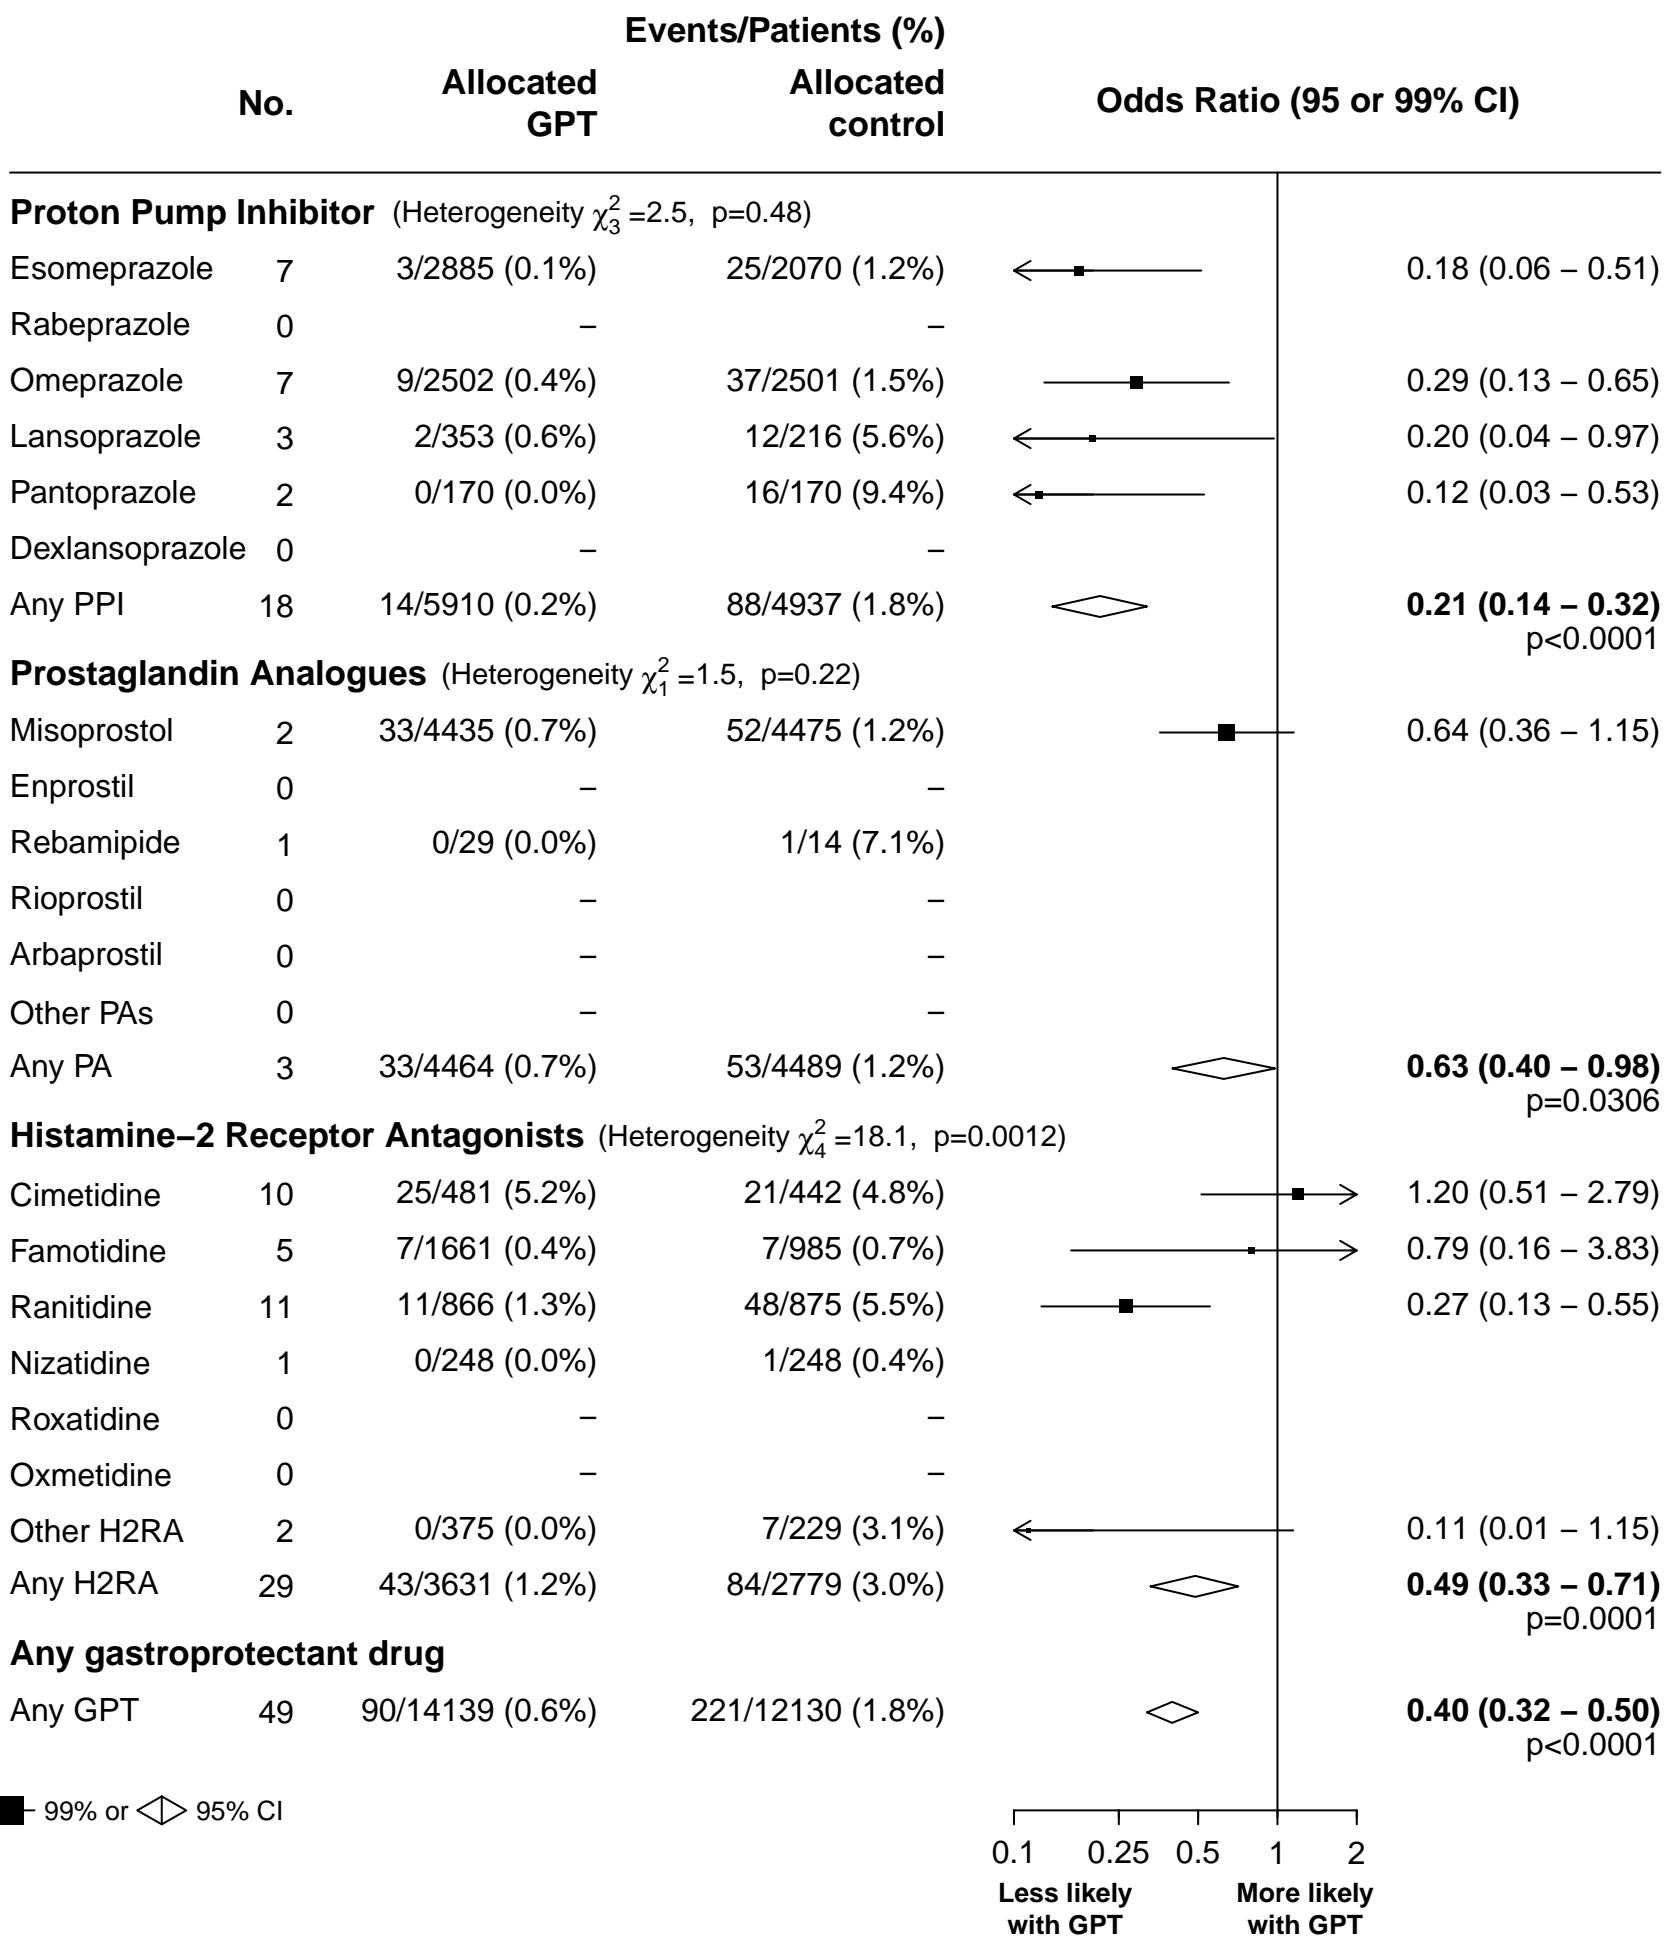

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 3: Prevention trials – effects of individual gastroprotectant drugs on any symptomatic ulcer

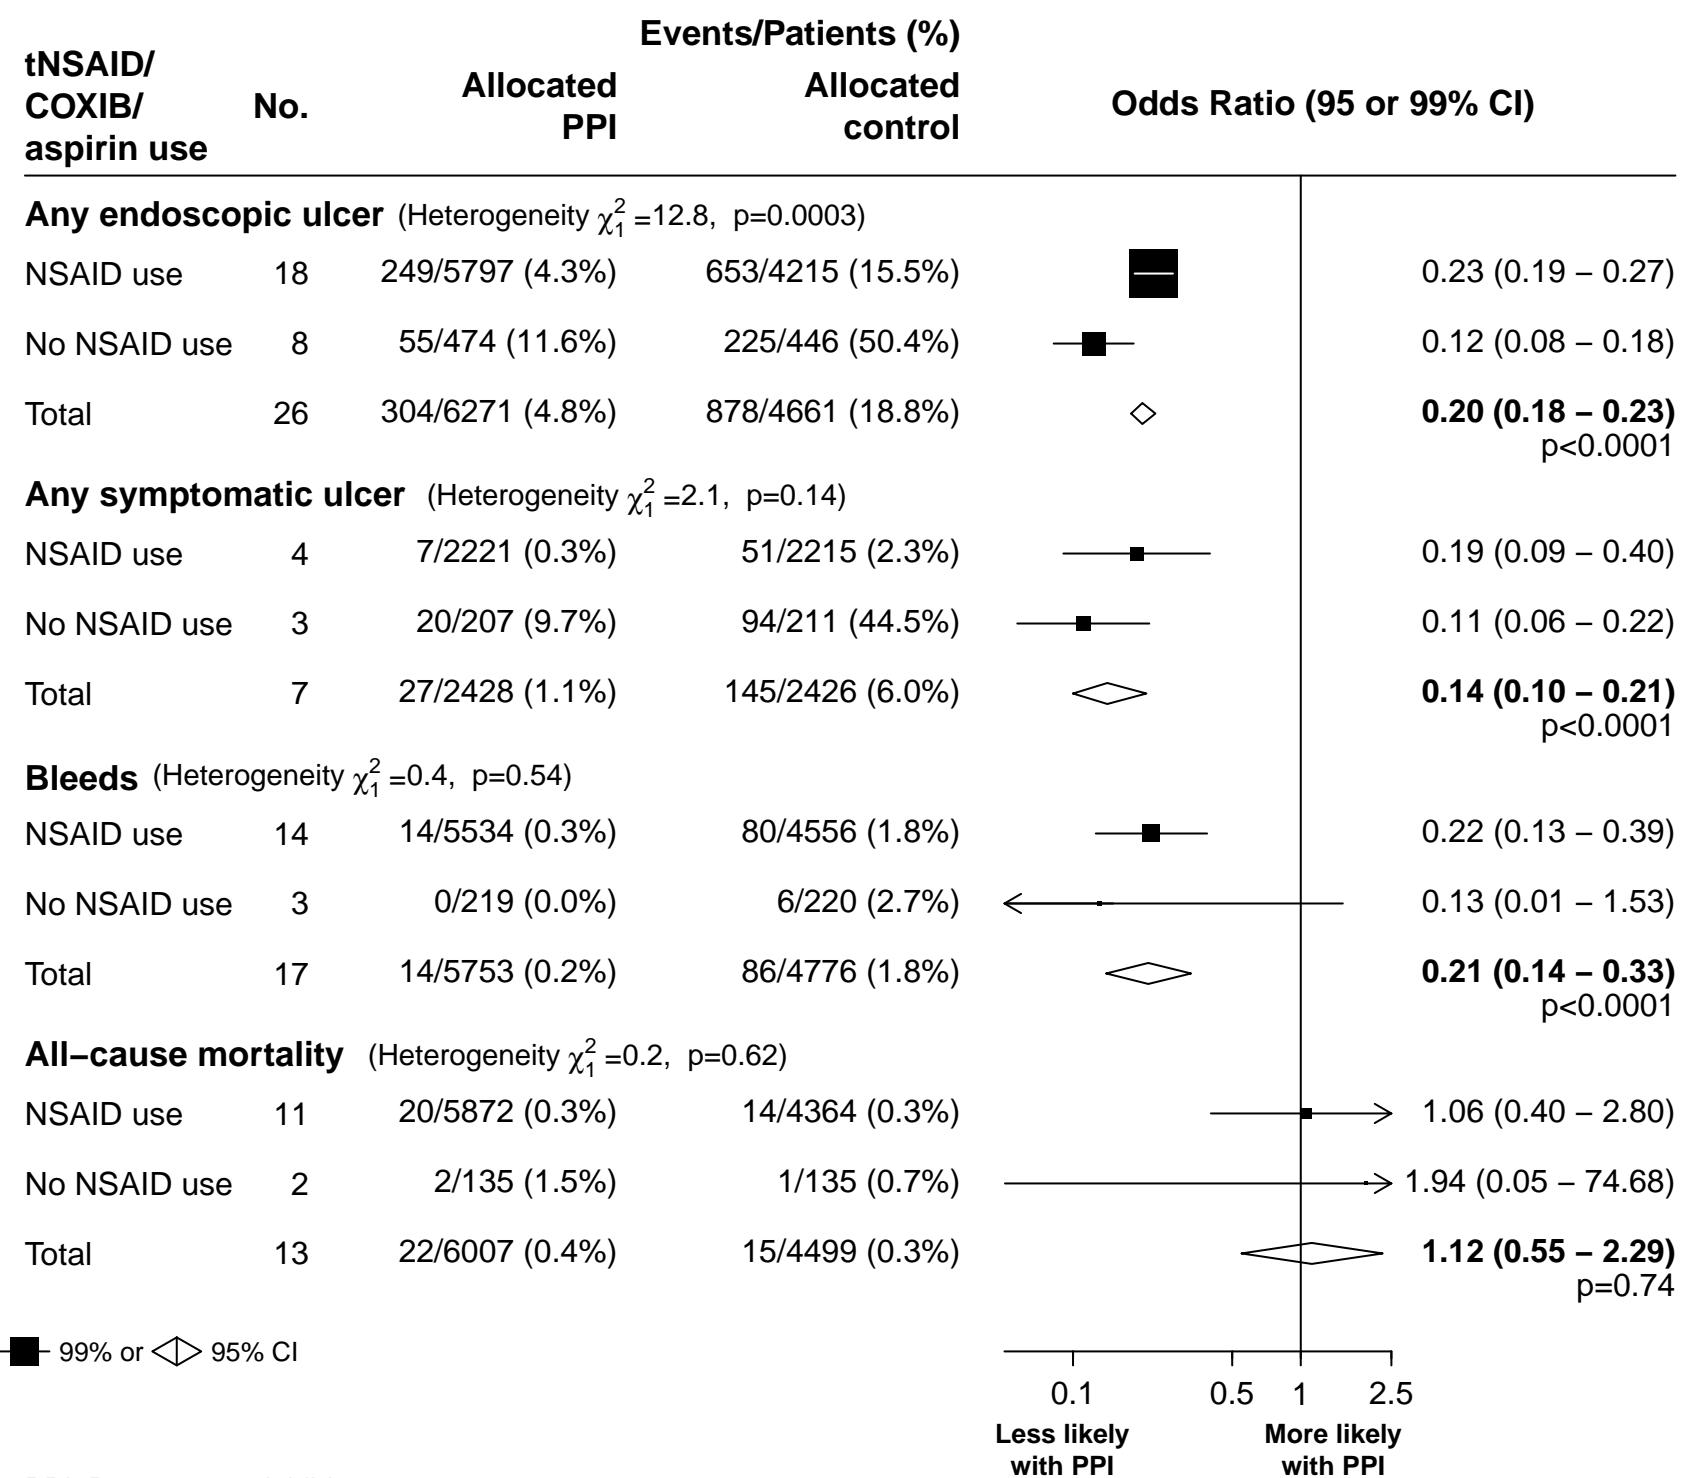

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists,
GPT=Gastroprotectant drug

Webfigure 4: Prevention trials – effects of gastroprotectants on bleeds

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists,
GPT=Gastroprotectant drug

Webfigure 5: Prevention trials – effects of proton pump inhibitors on endoscopic and symptomatic ulcers, bleeds and all-cause mortality, subdivided by use of NSAIDs

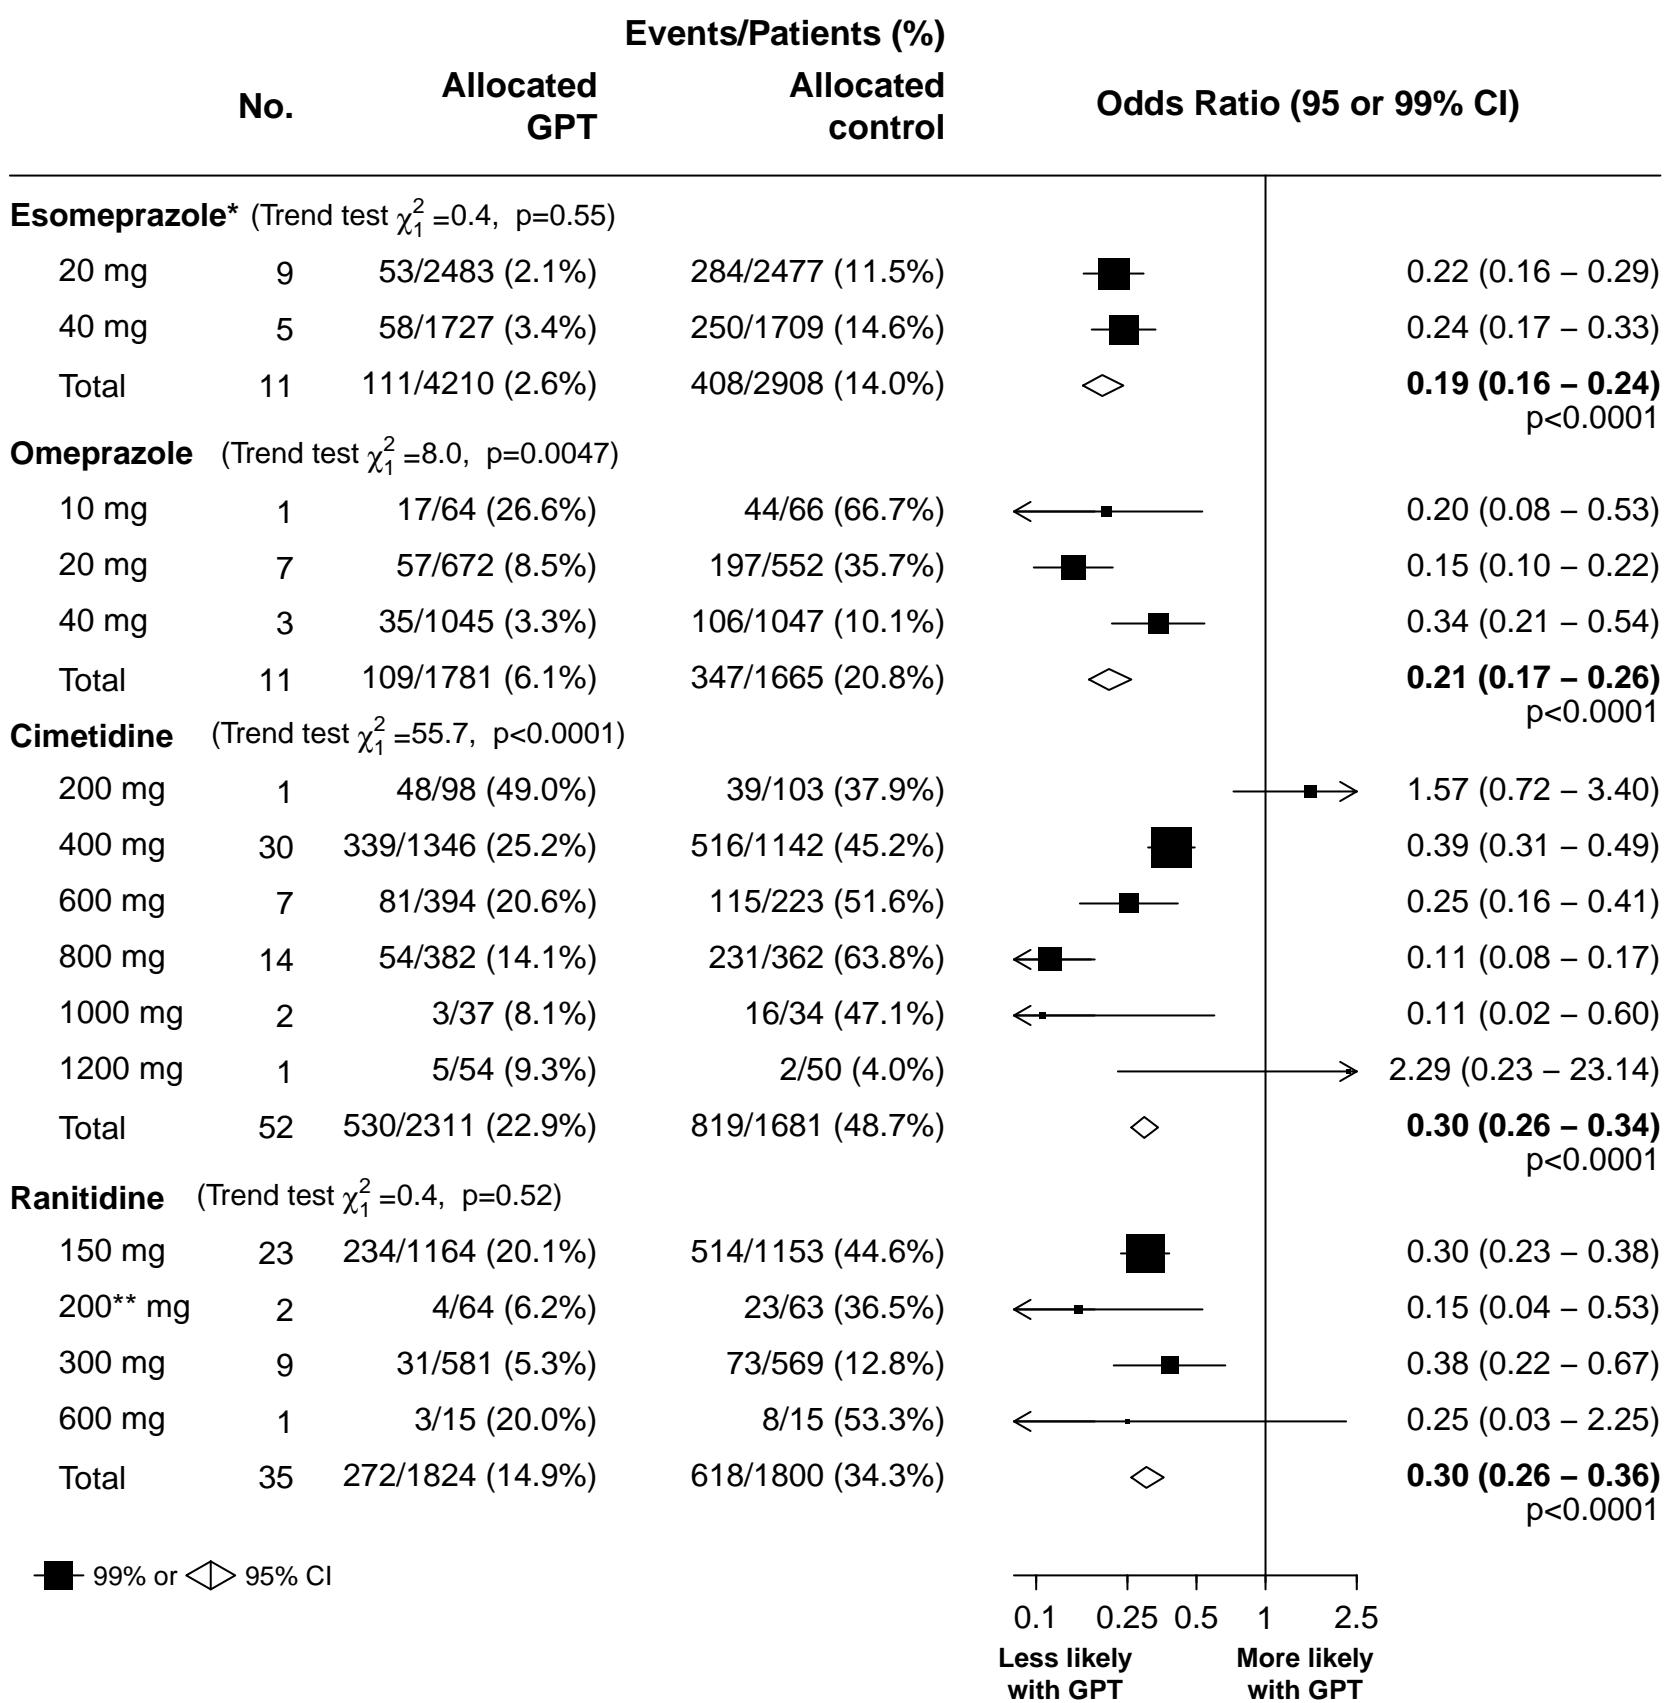

Trial categorization:

NSAID use: greater than or equal to 80% of patients took a tNSAID, COXIB or aspirin.

No NSAID use: less than 80% of patients took a tNSAID, COXIB or aspirin.

The results for trials in which information about NSAID use at baseline was unavailable were similar to those with data available: any endoscopic ulcer RR=0.12 (0.06–0.25) unavailable vs 0.20 (0.18–0.23) available; any symptomatic ulcer RR=0.14 (0.03–1.80) unavailable vs 0.14 (0.10–0.21) available; bleeds no data for unavailable; all-cause mortality RR=0.87 (0.28–2.75) unavailable vs 1.12 (0.55–2.29) available.

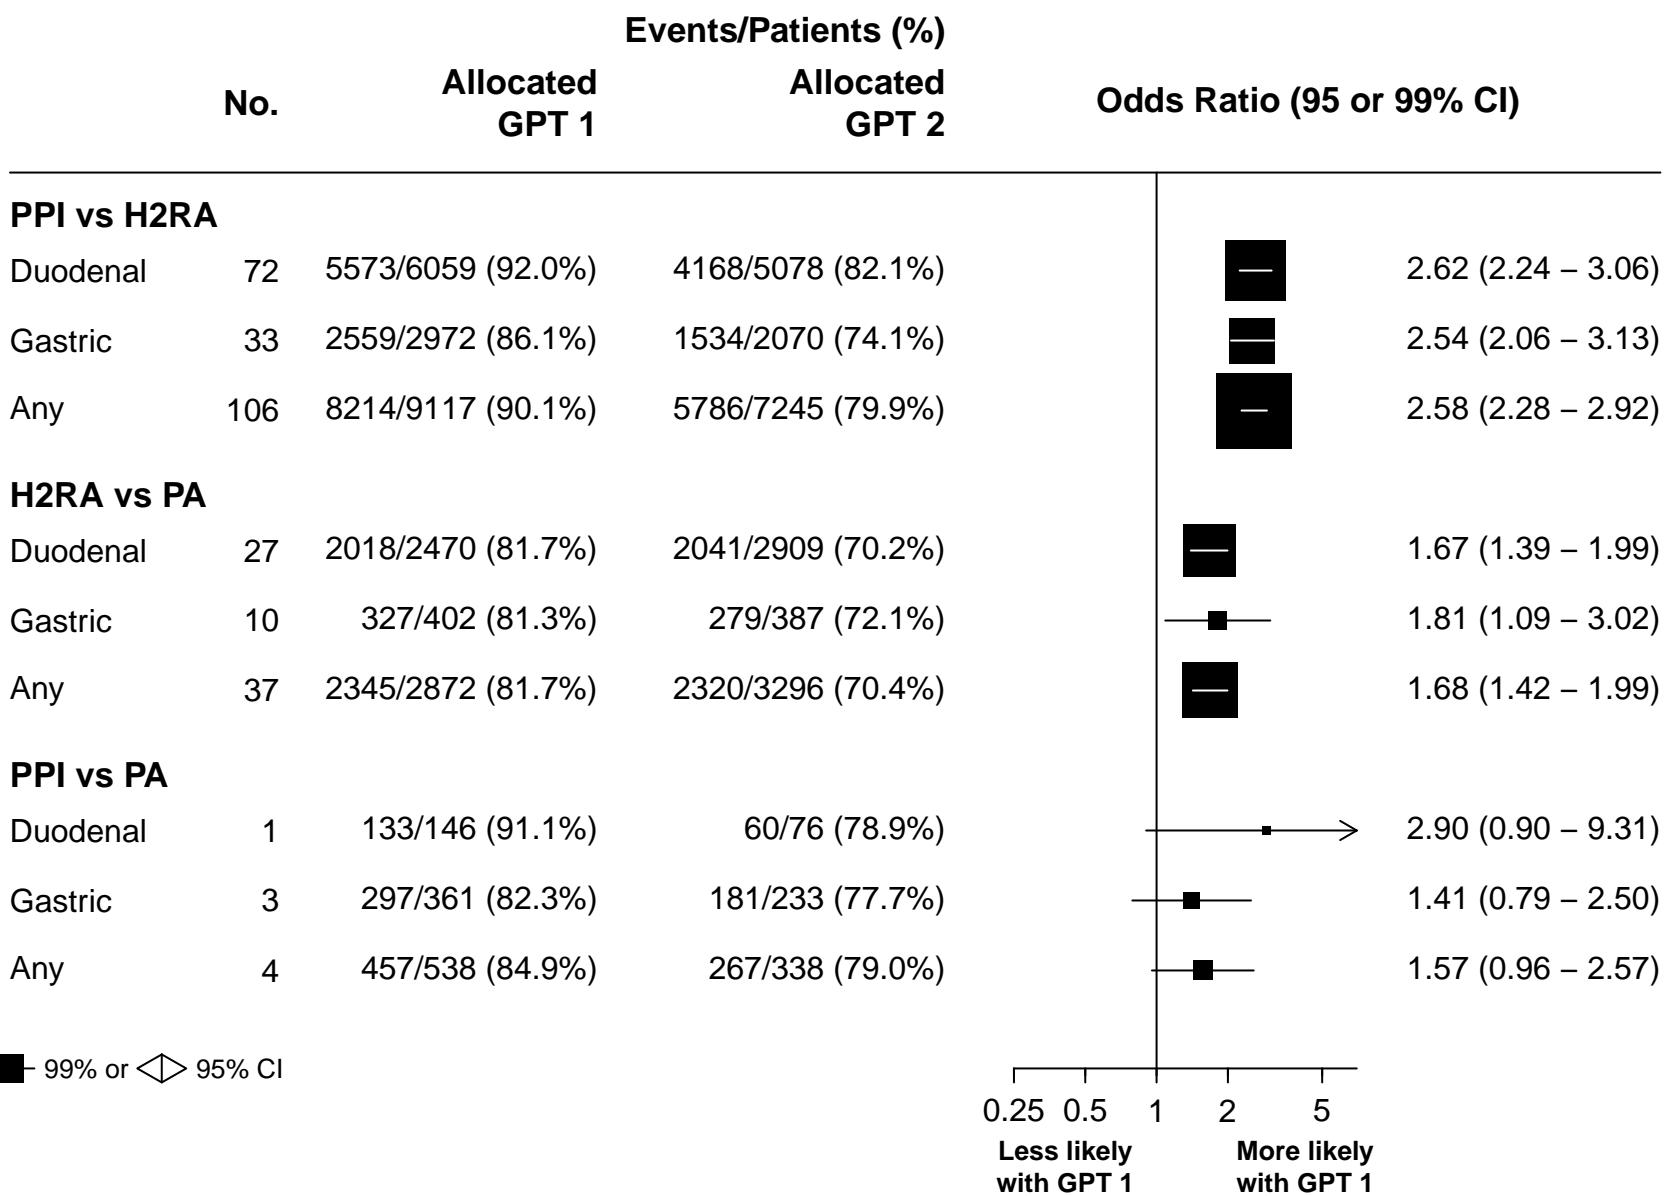

Webfigure 6: Prevention trials – effects of esomeprazole, omeprazole, cimetidine and ranitidine on any endoscopic ulcer, by dose studied

*Some trials involve 20mg vs 40mg vs control, which happened to lead both dose-specific estimates being less extreme than the overall estimate.

**Penston (1993) trial was included in this dose group which reported a ranitidine dose of 225 mg.

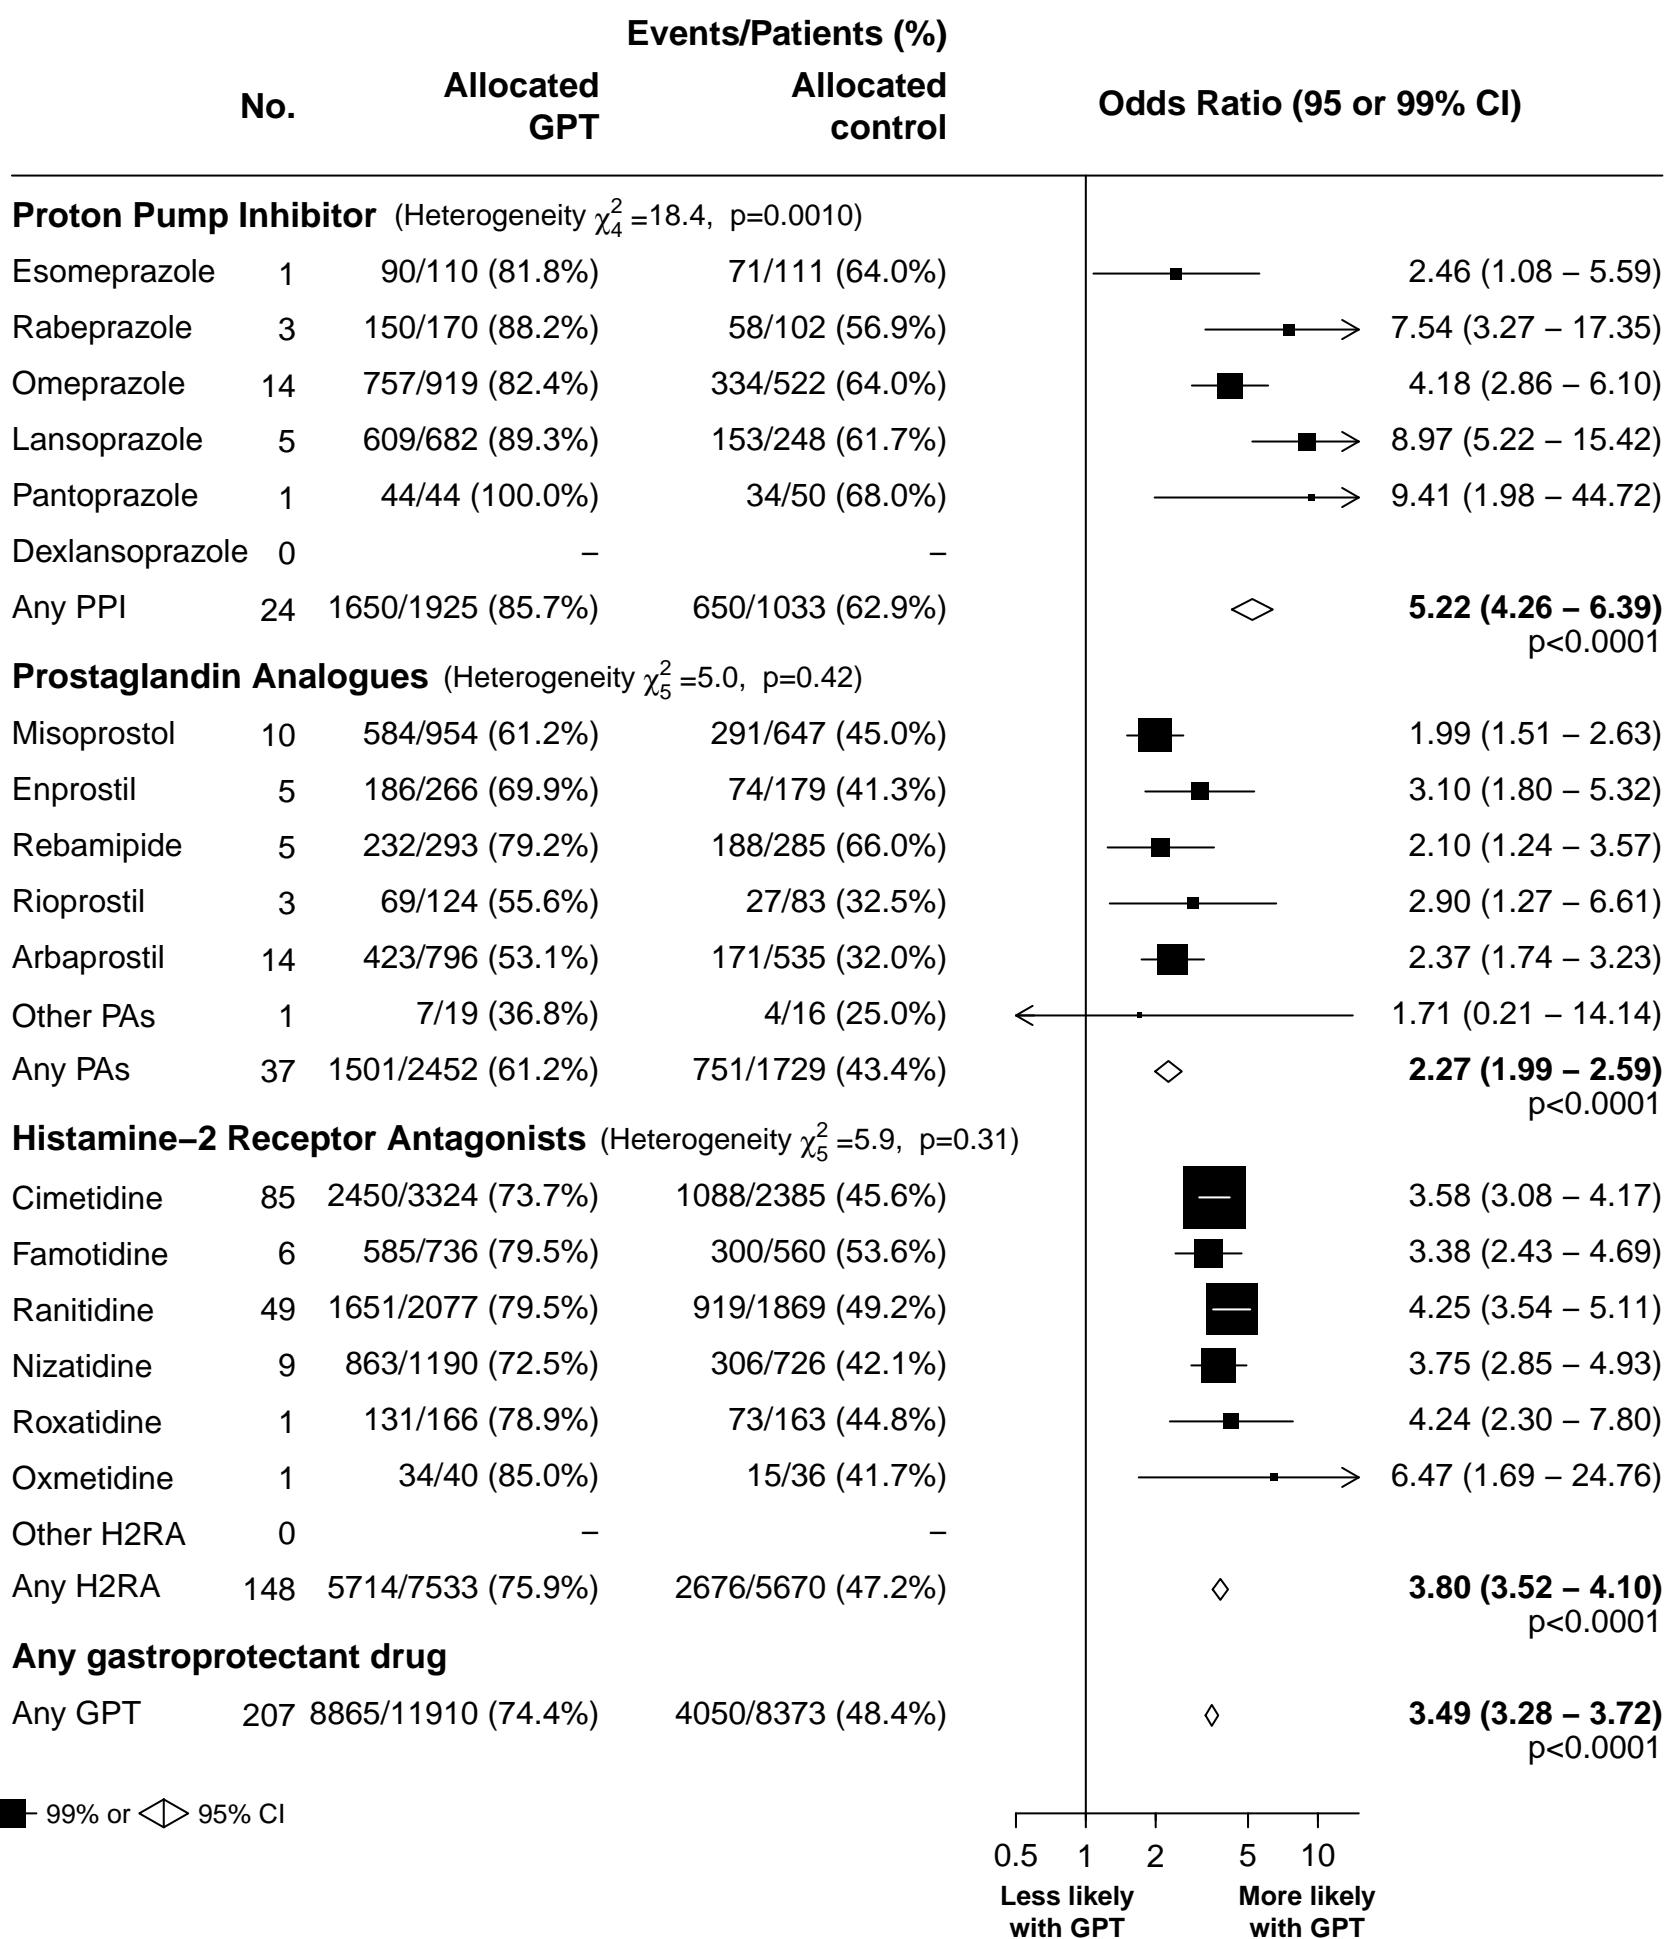

Webfigure 7: Healing trials – comparison of gastroprotectants on endoscopic ulcer healing

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists

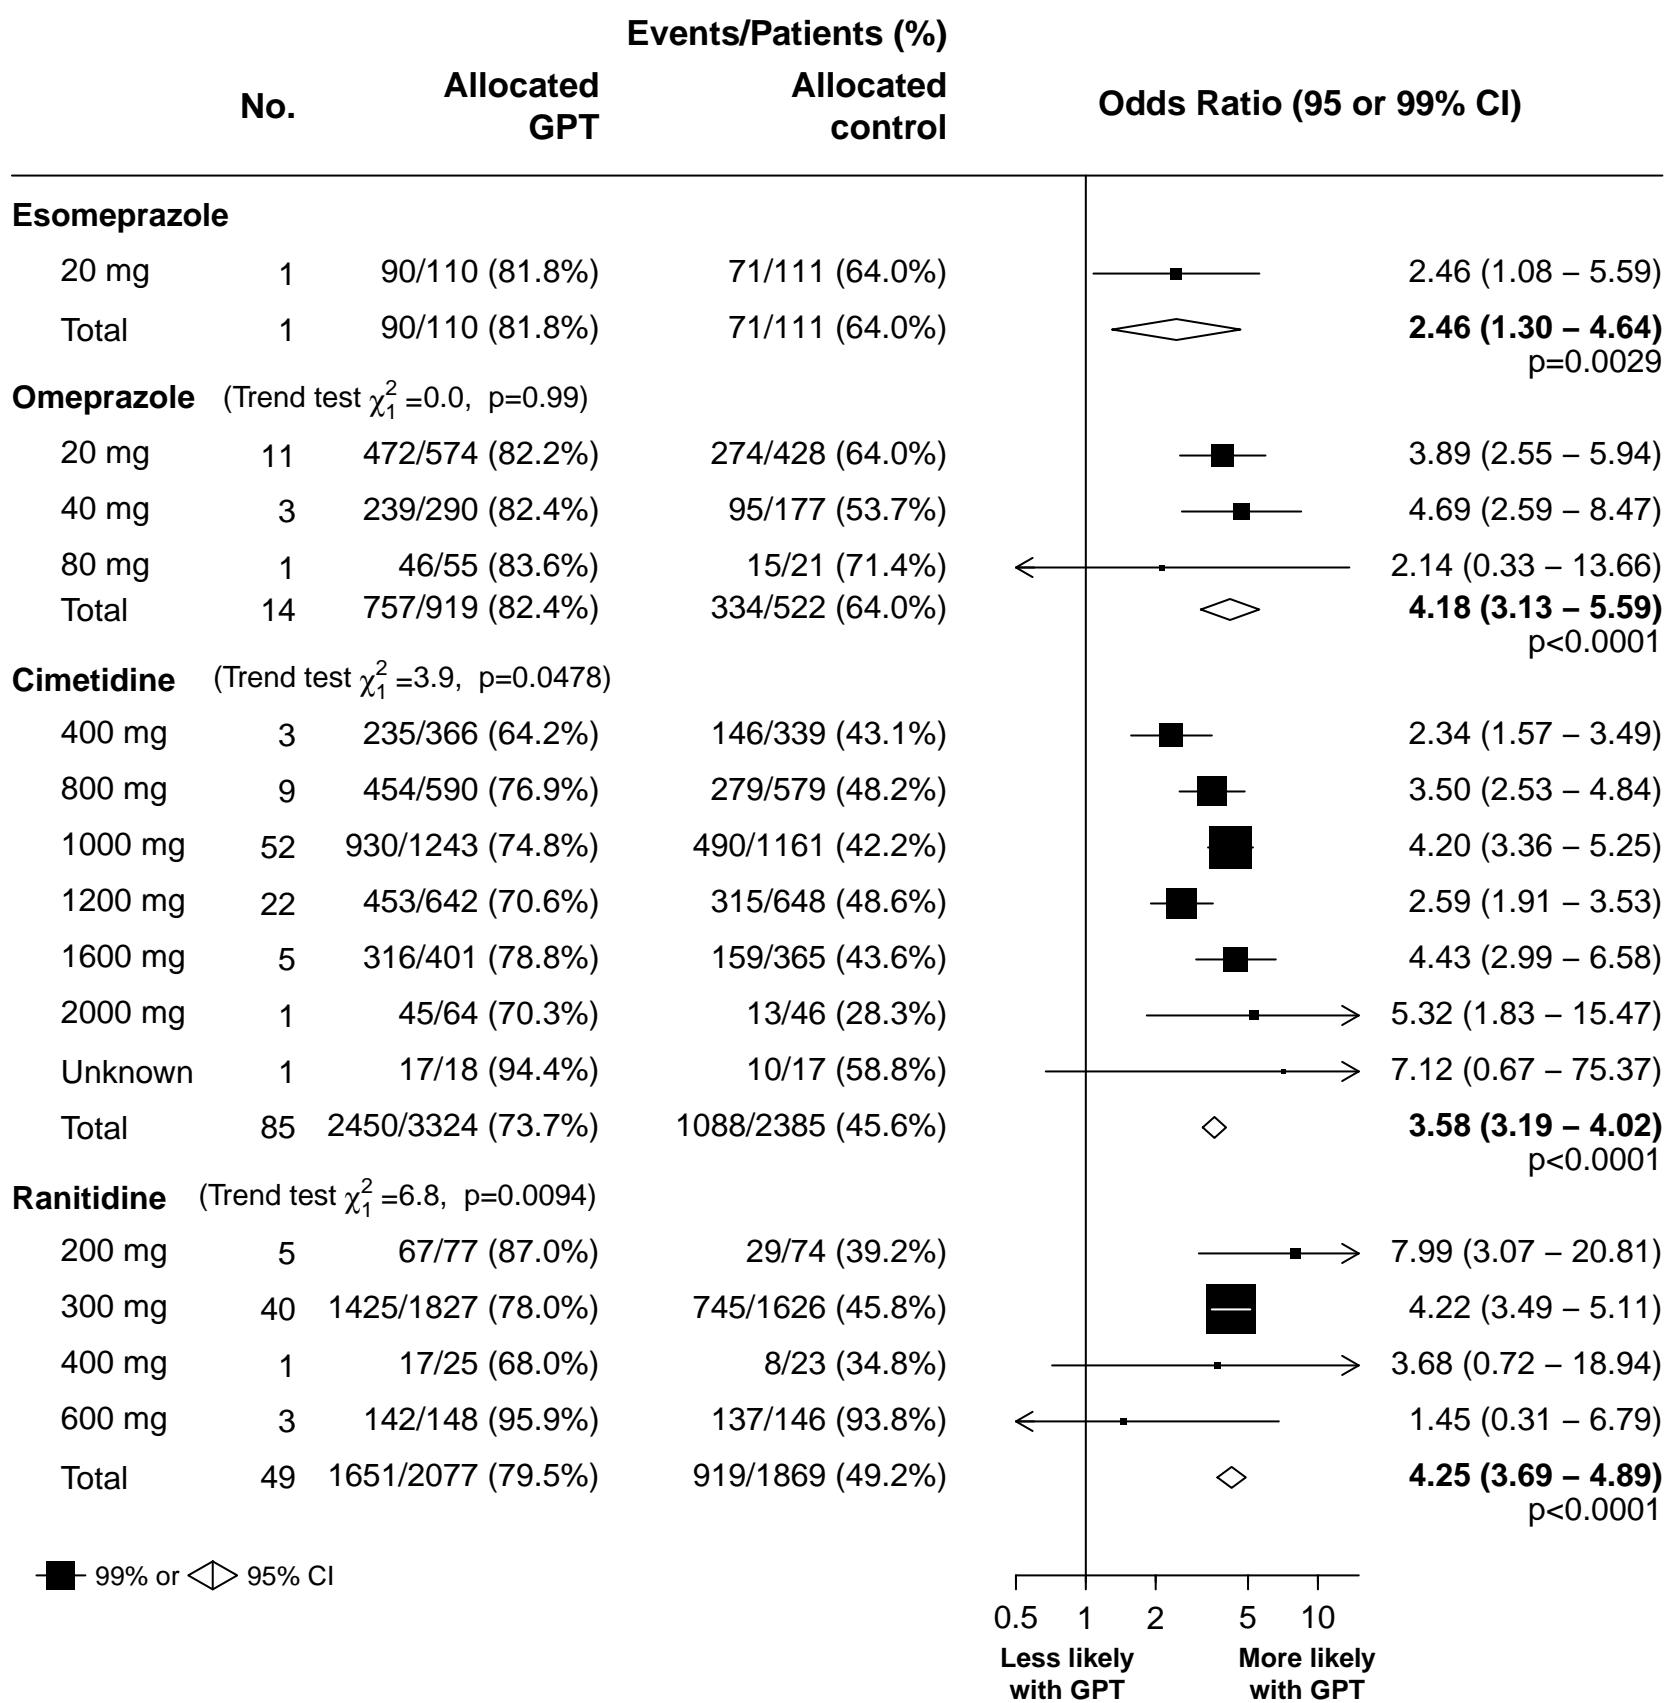

There was one trial comparing PA + H2RA versus H2RA with 76/82 vs 59/84 endoscopic ulcers.
Two additional trials compared PA + PPI versus PPI with a total of 36/130 vs 19/127 endoscopic ulcers.

Webfigure 8: Healing trials – effects of individual gastroprotectant drugs on endoscopic ulcer healing

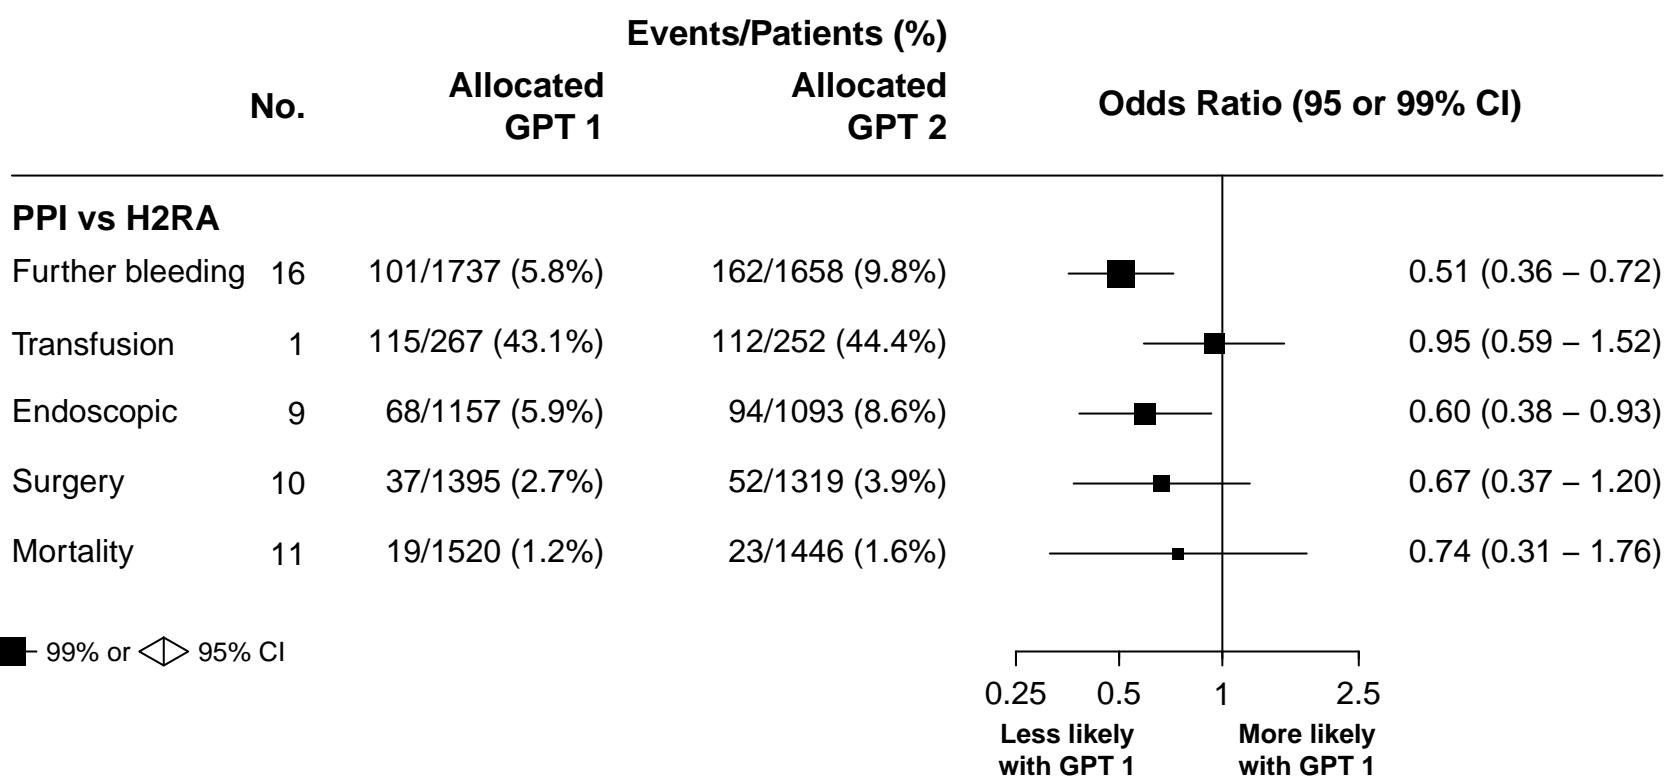

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 9: Healing trials – effects of esomeprazole, omeprazole, cimetidine and ranitidine on endoscopic ulcers, by dose studied

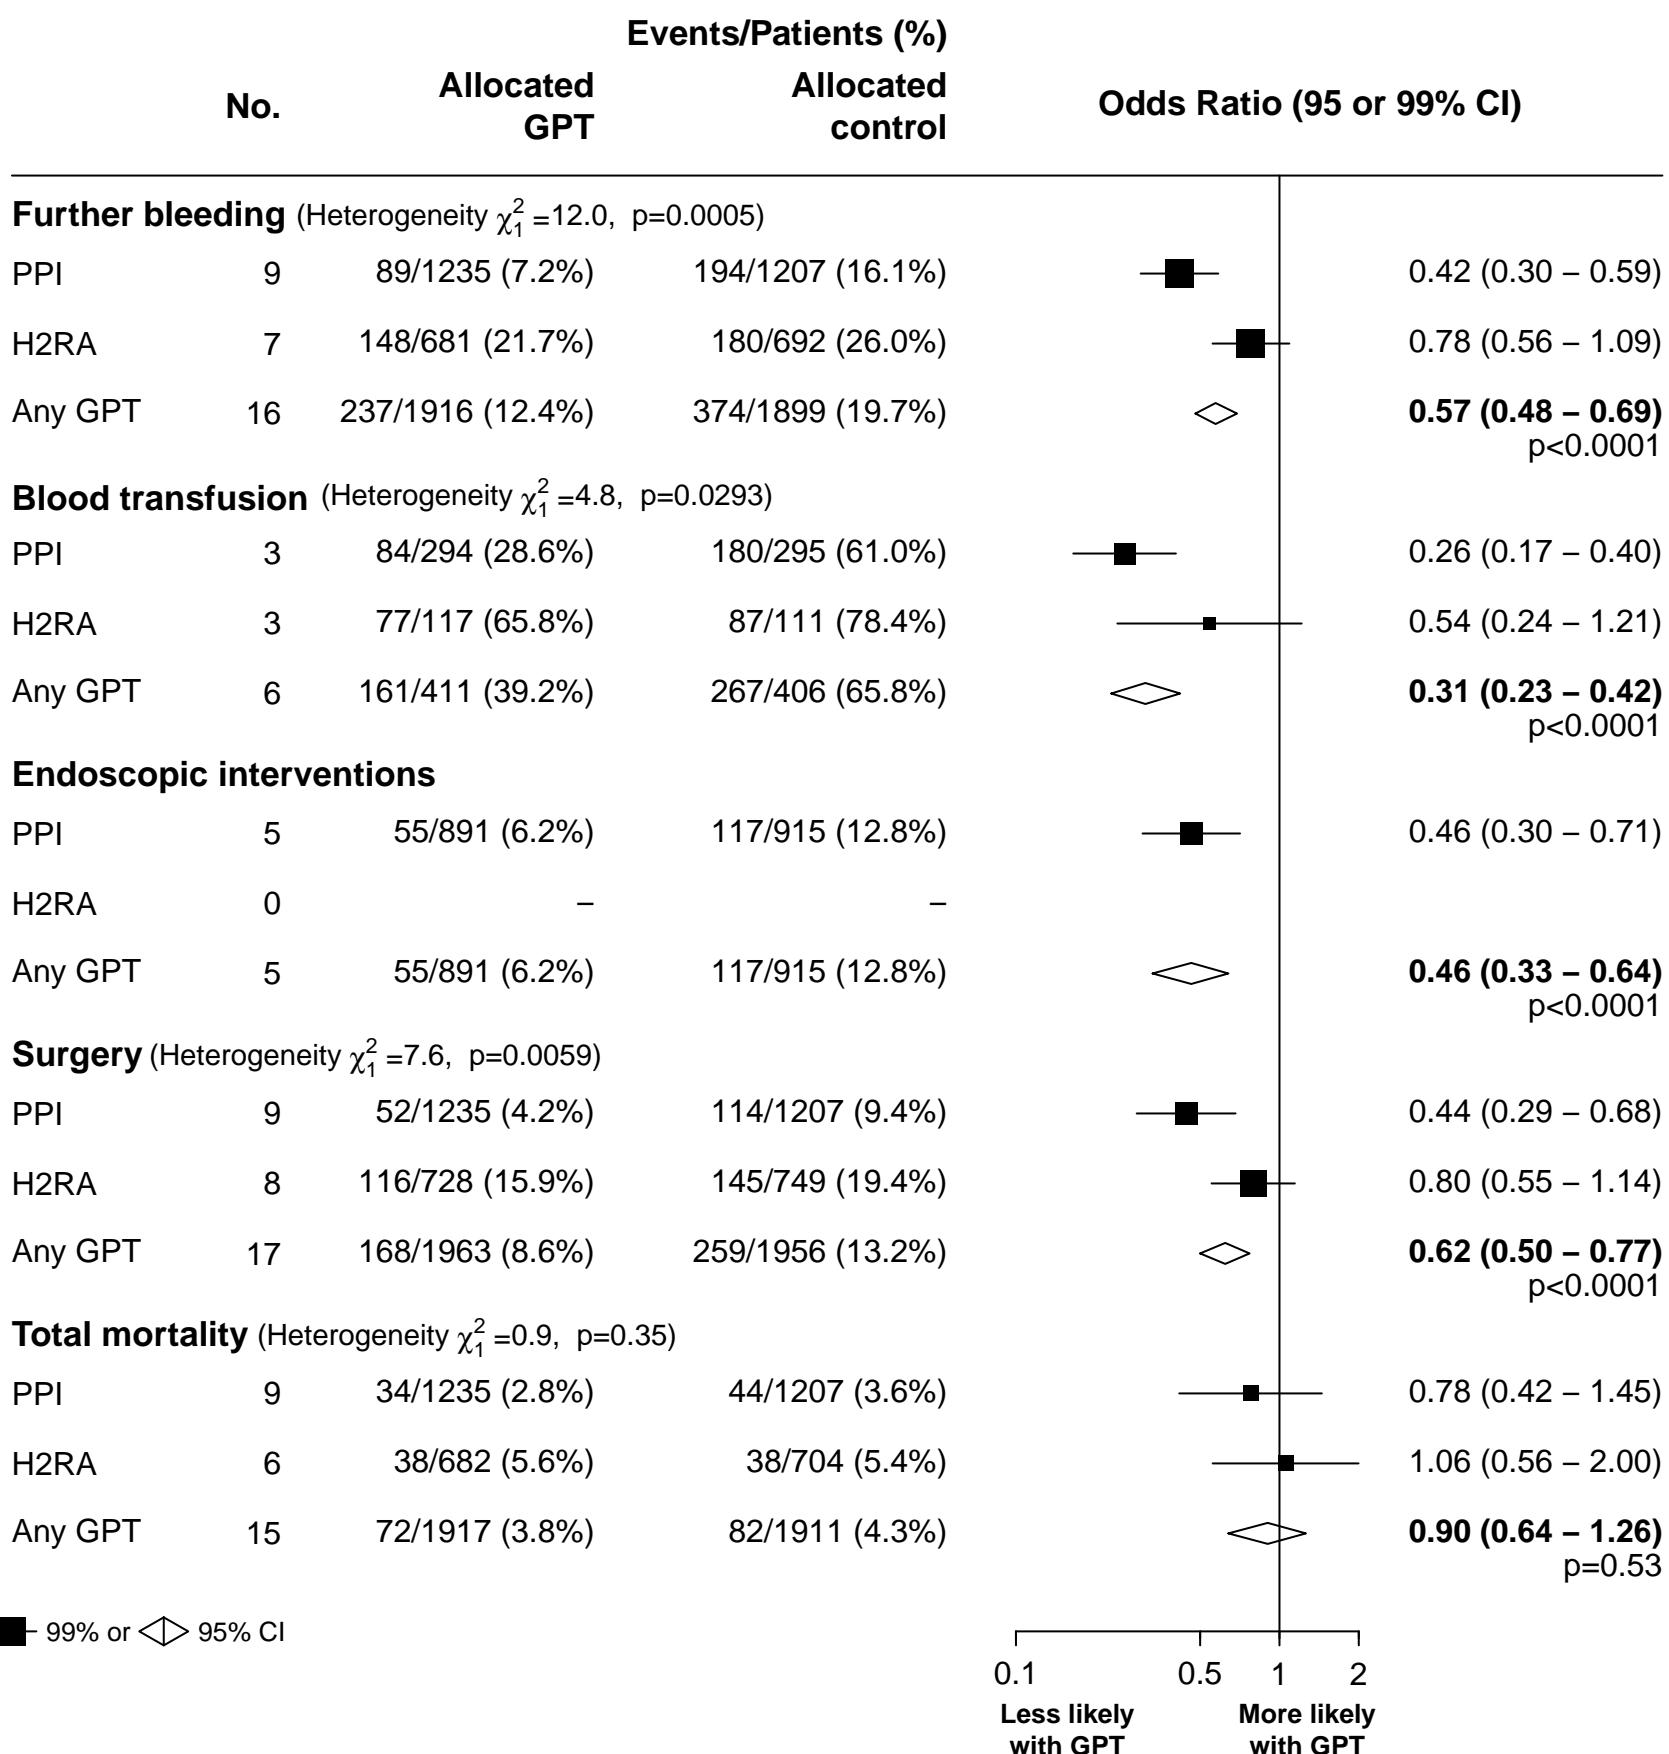

Webfigure 10: Acute UGI bleeding treatment trials – comparison of gastroprotectants on further bleeding, need for blood transfusion, endoscopic intervention, surgery and all-cause mortality

PPI=Proton pump inhibitors, H2RA=Histamine–2 receptor antagonists

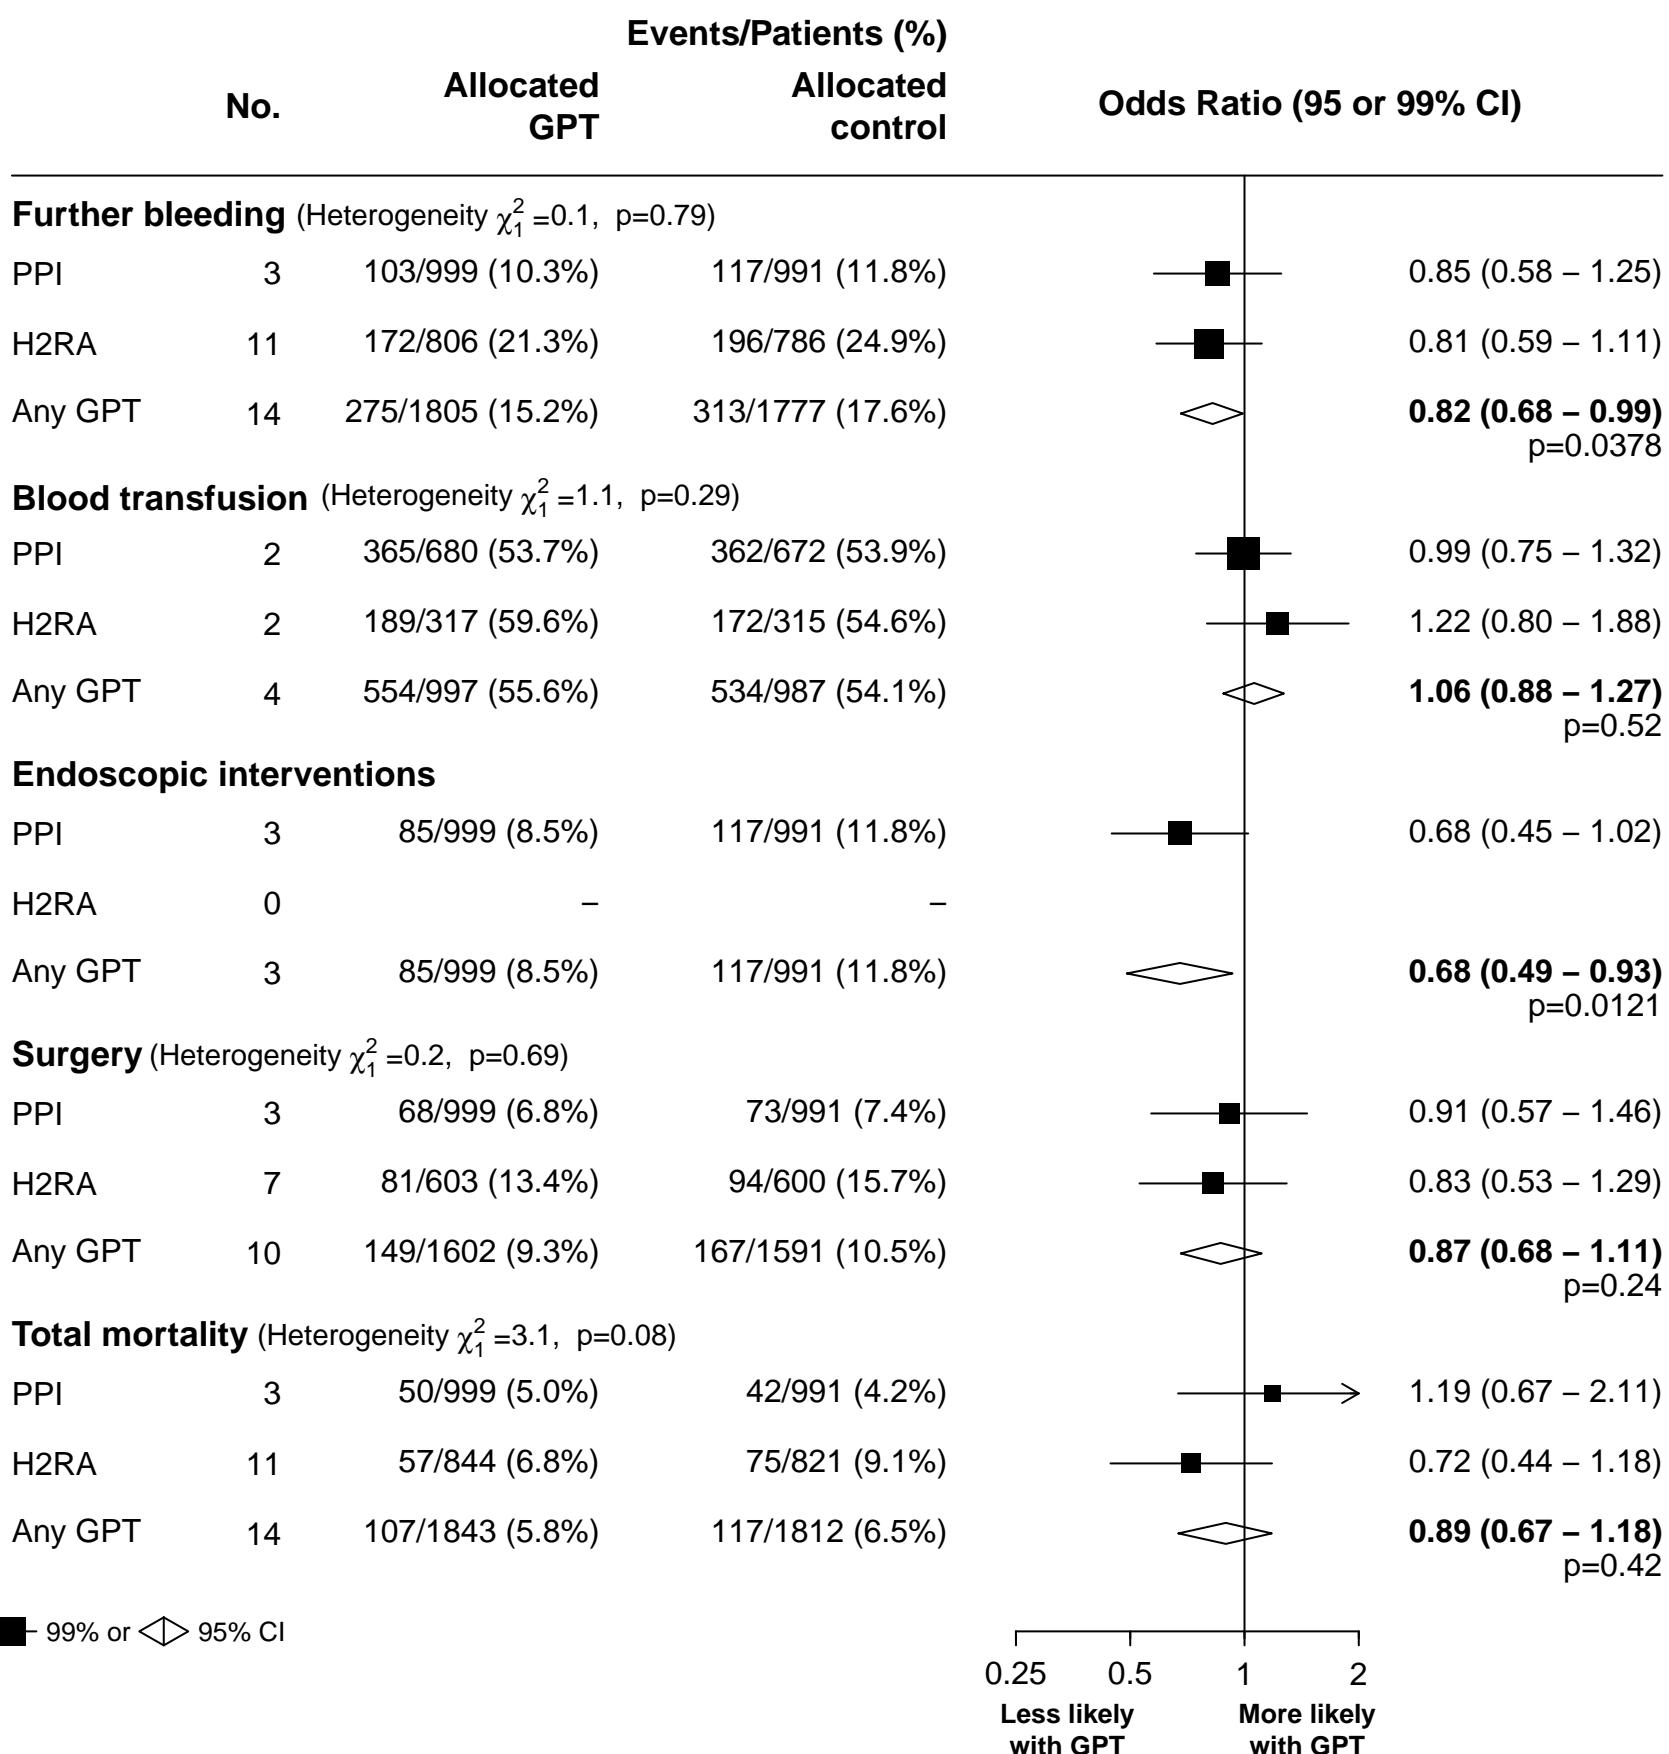

One additional trial compared PA + PPI versus PPI, in which there were 7/56 vs 8/67 rebleeds, 1/56 vs 2/67 surgical procedures and 2/56 vs 1/67 deaths.

Webfigure 11: Effects of gastropredictants on further bleeding, need for blood transfusion, endoscopic intervention, surgery and all-cause mortality (acute UGI bleeding treatment trials of peptic ulcer)

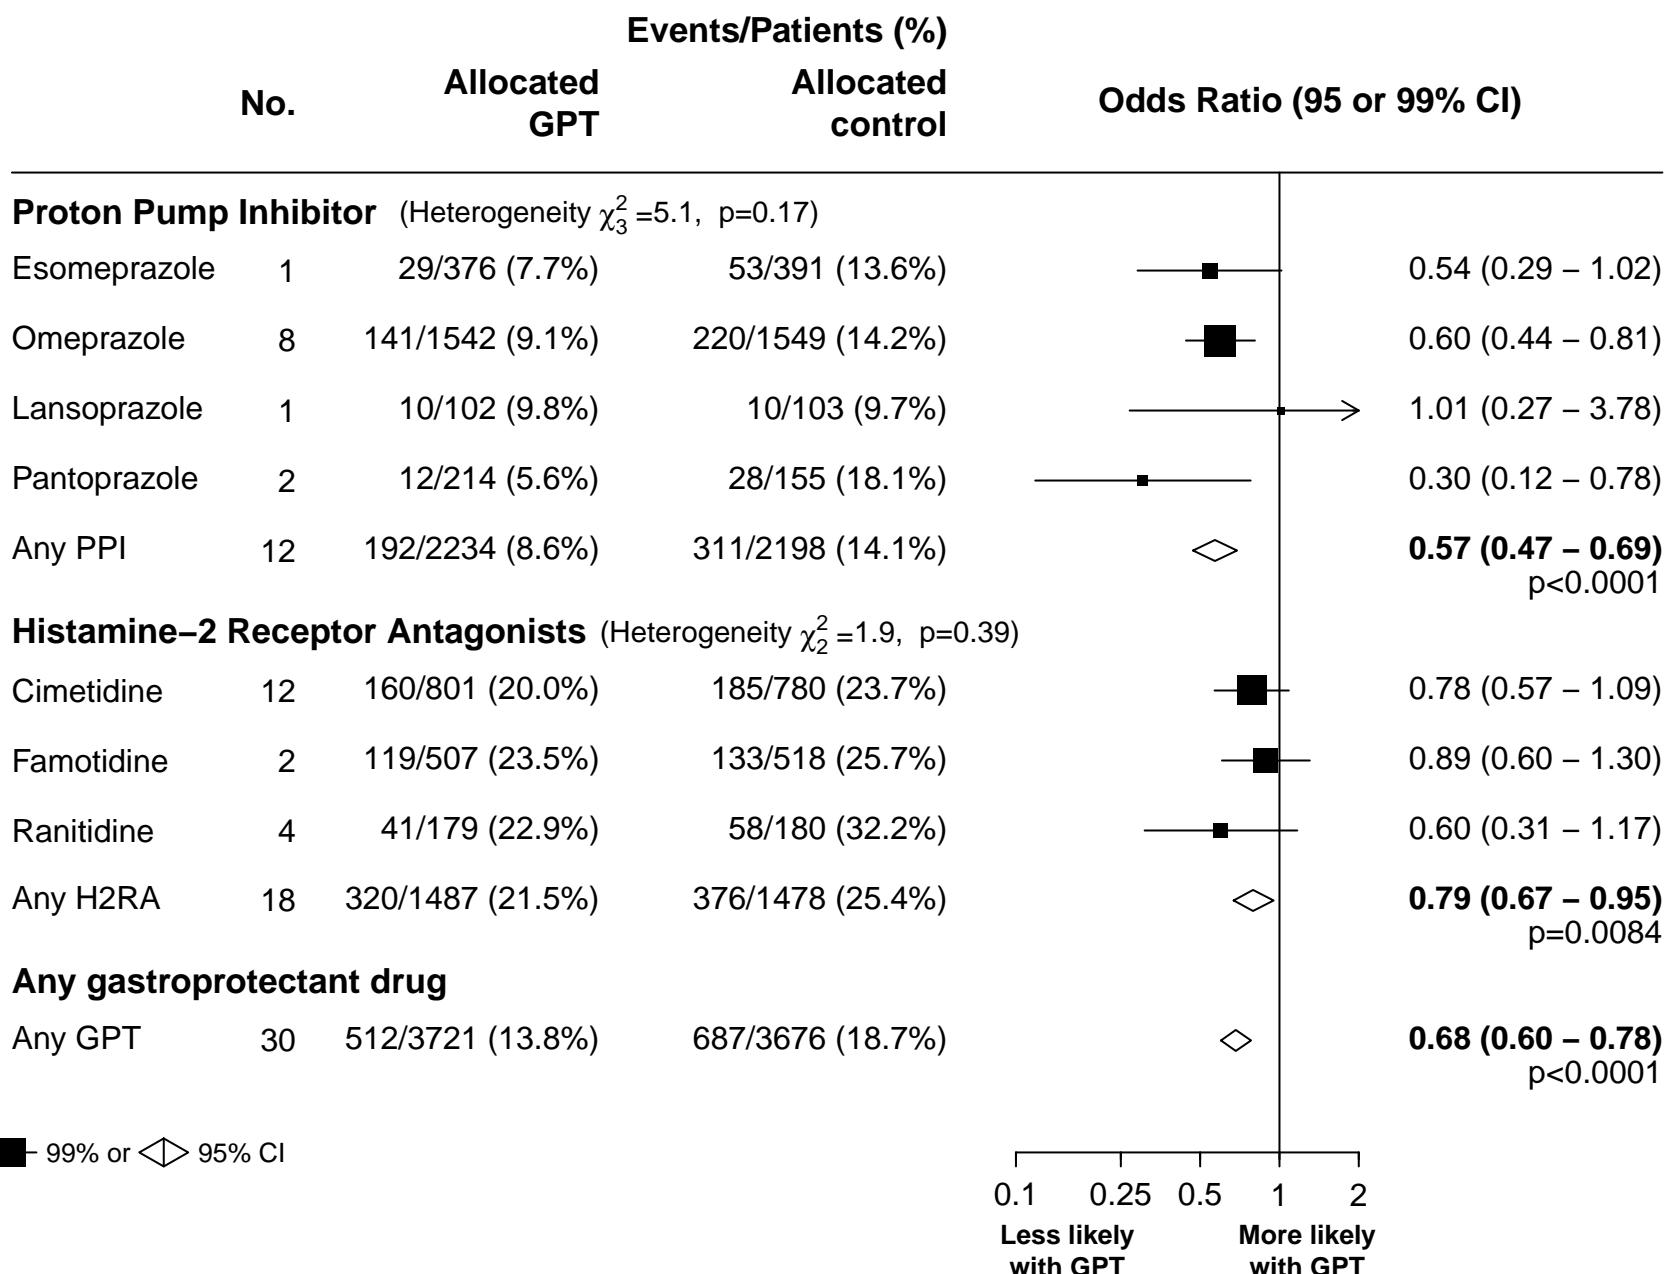

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Gastropredictant drug

Webfigure 12: Effects of gastroprotectants on further bleeding, need for blood transfusion, endoscopic intervention, surgery and all-cause mortality (acute UGI bleeding treatment trials of uncertain aetiology)

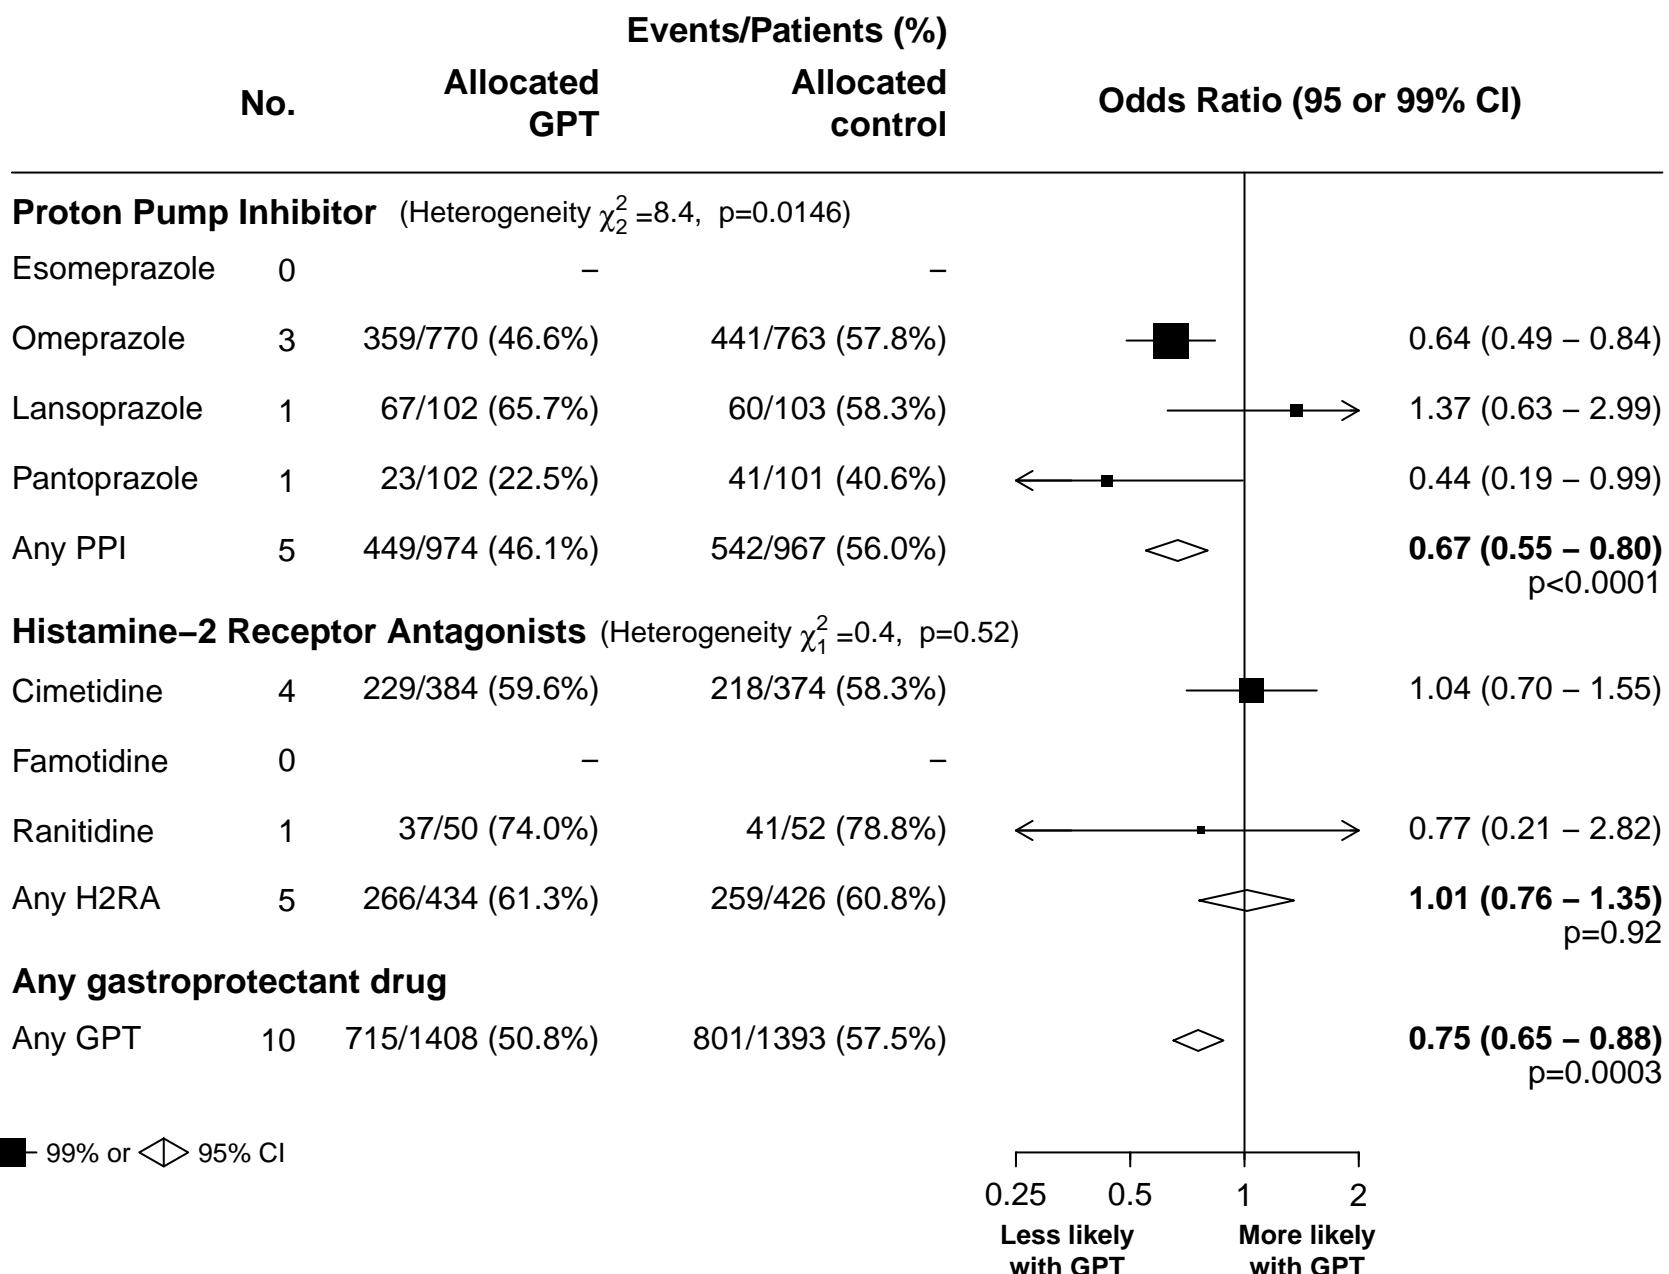

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 13a: Acute UGI bleeding treatment trials – effects of individual gastroprotectant drugs on further bleeding

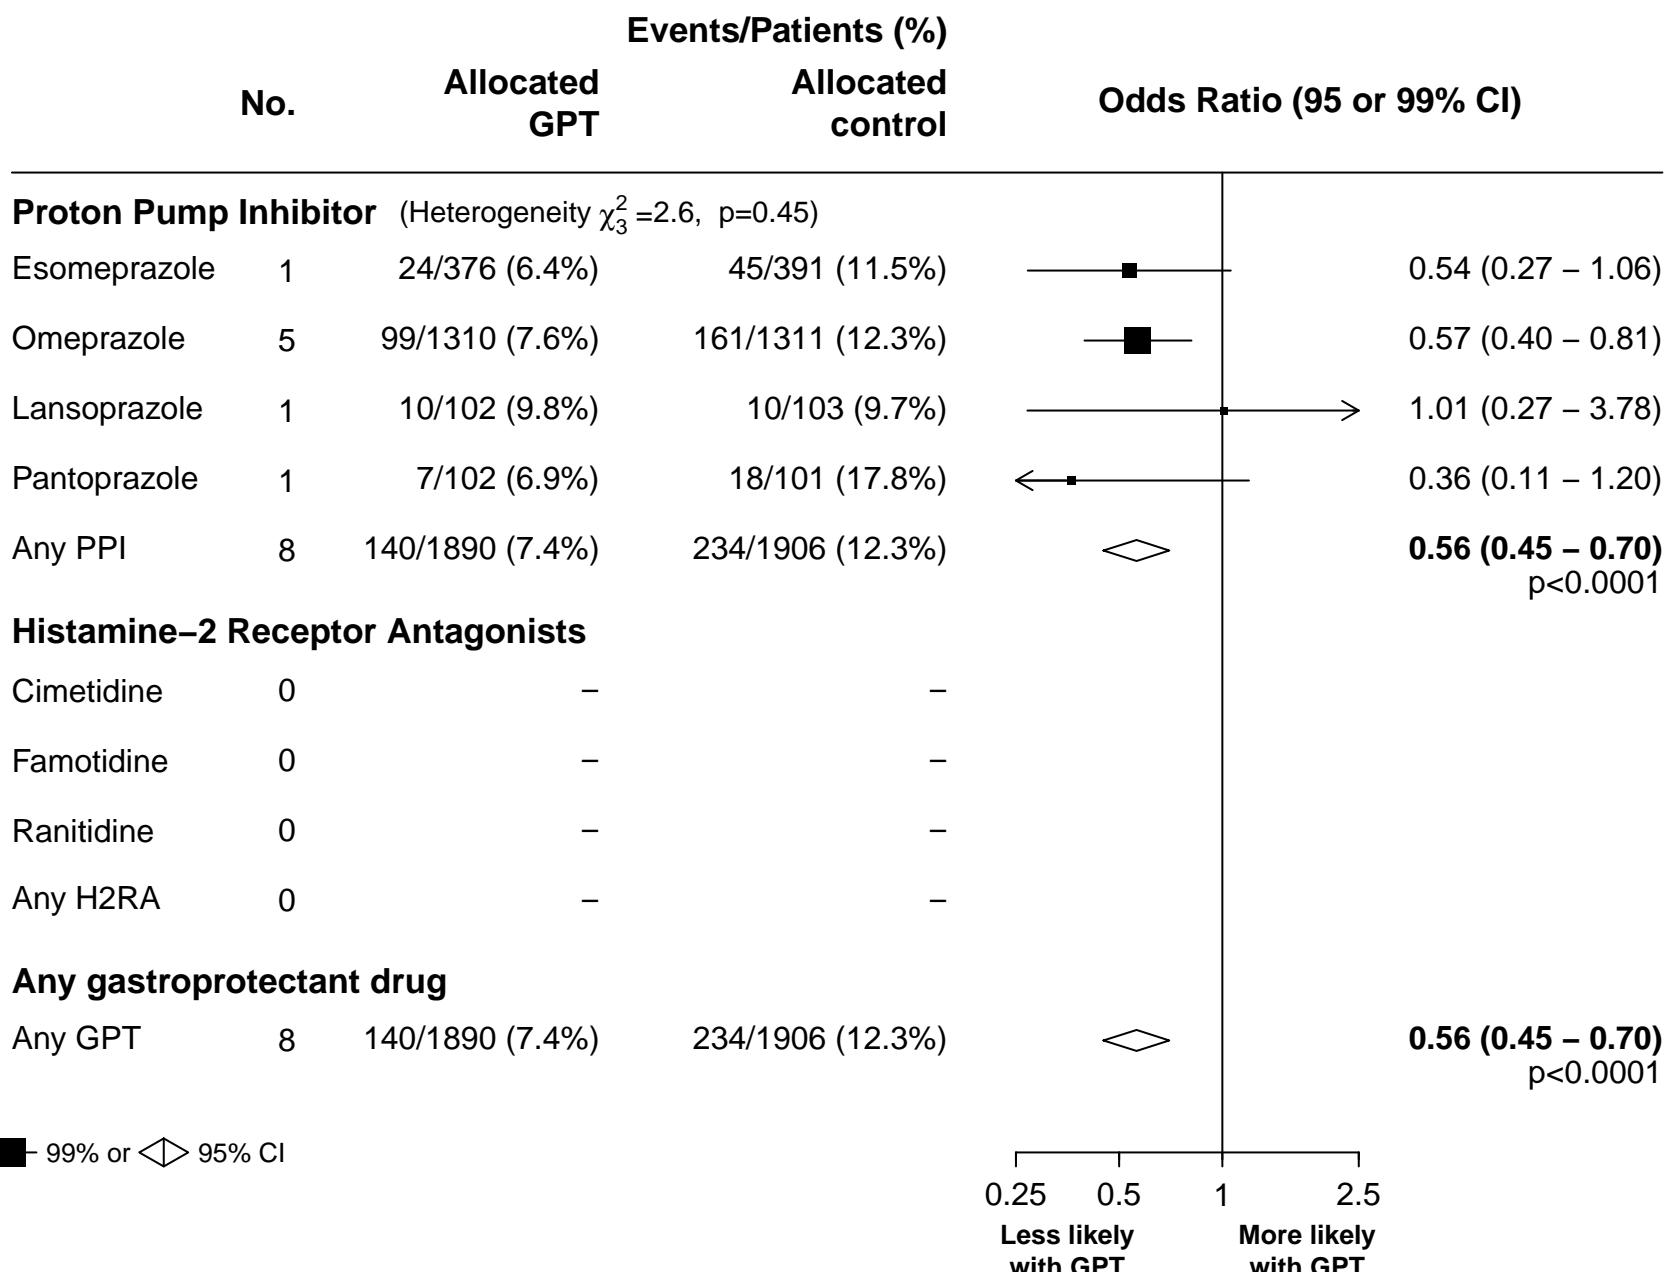

PPI=Proton pump inhibitors, H2RA=Histamine–2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 13b: Acute UGI bleeding treatment trials – effects of individual gastroprotectant drugs on blood transfusion

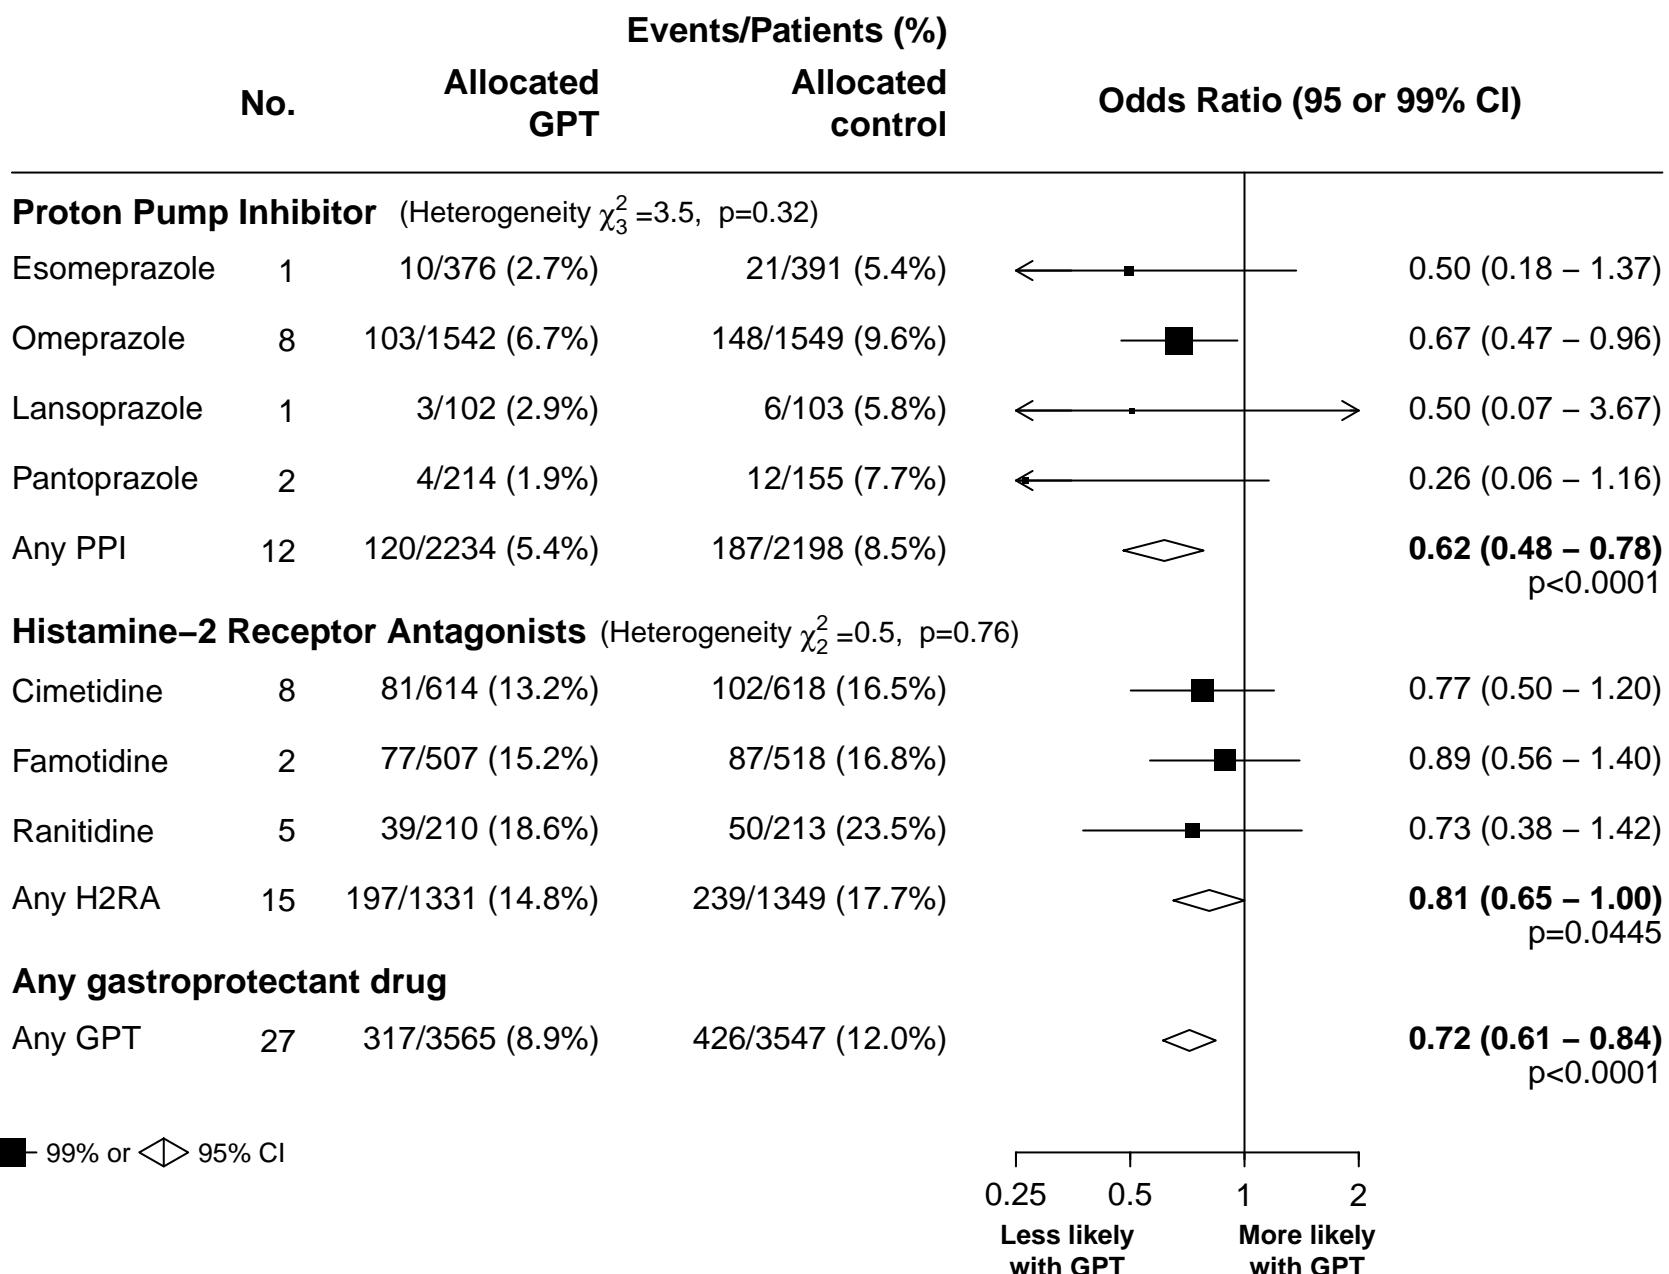

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 13c: Acute UGI bleeding treatment trials – effects of individual gastroprotectant drugs on endoscopic interventions

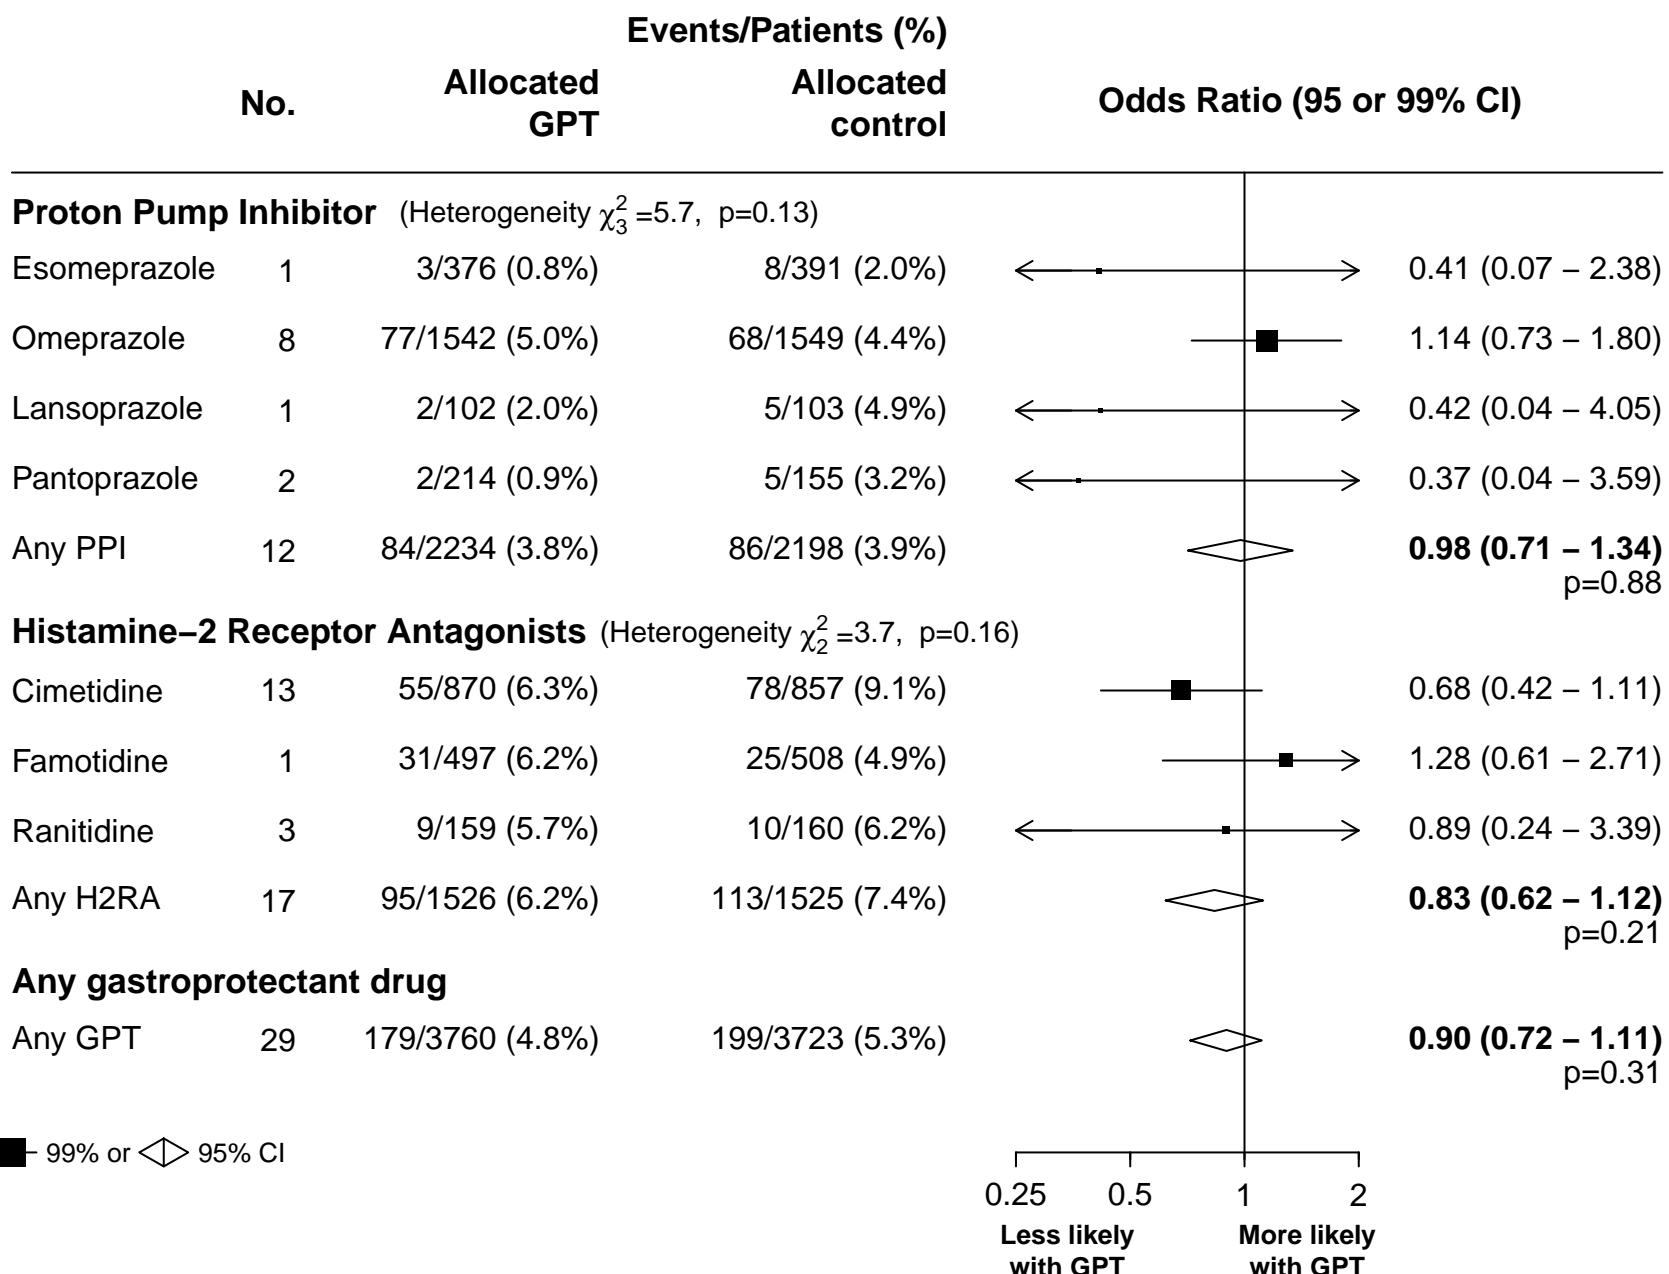

PPI=Proton pump inhibitors, H2RA=Histamine–2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 13d: Acute UGI bleeding treatment trials – effects of individual gastroprotectant drugs on surgery

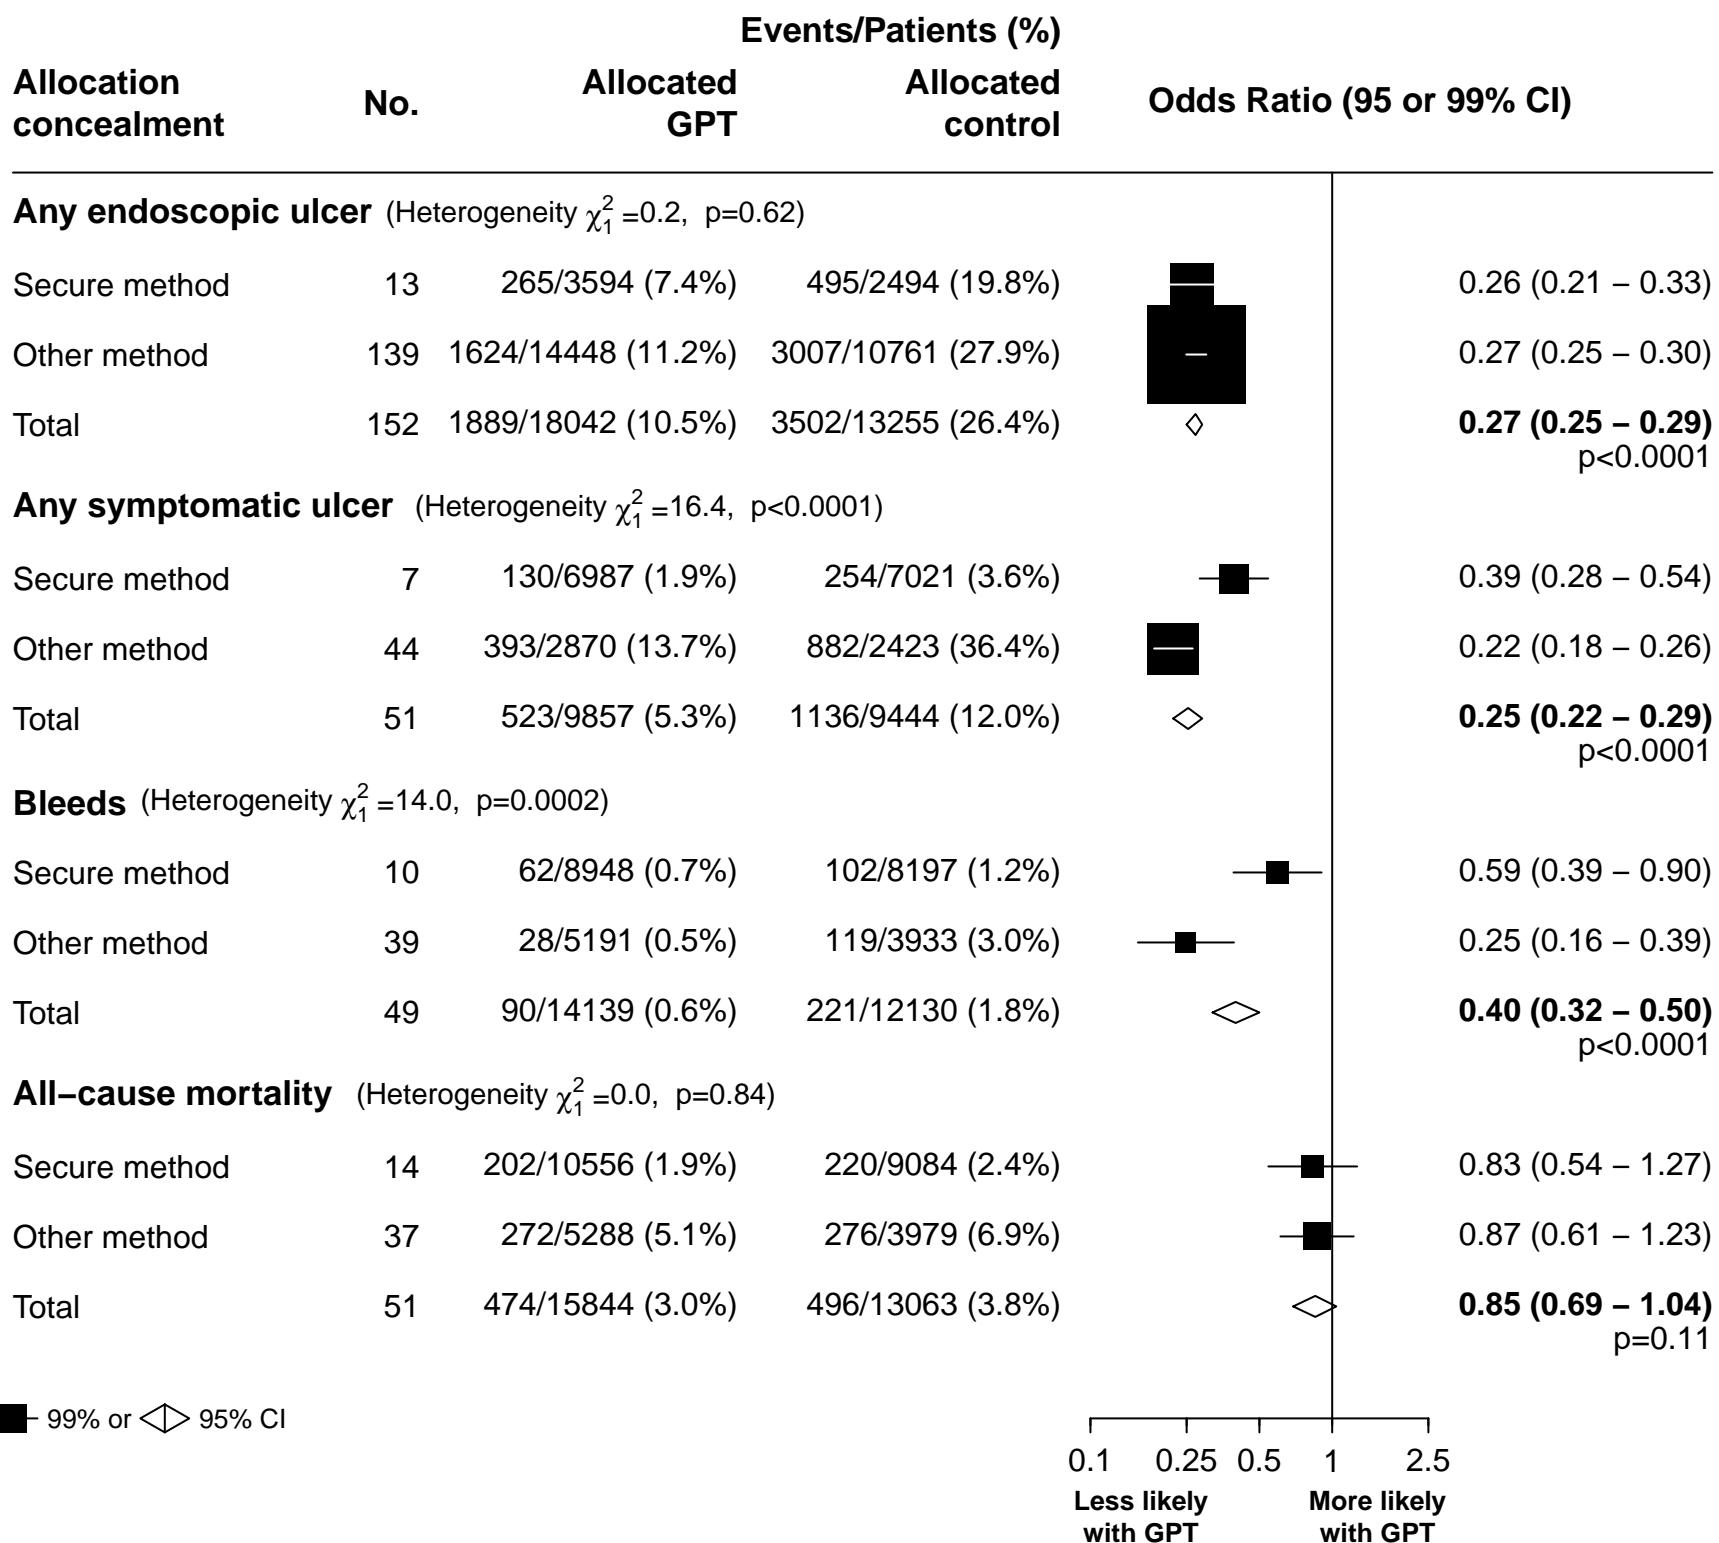

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 13e: Acute UGI bleeding treatment trials – effects of individual gastroprotectant drugs on all-cause mortality

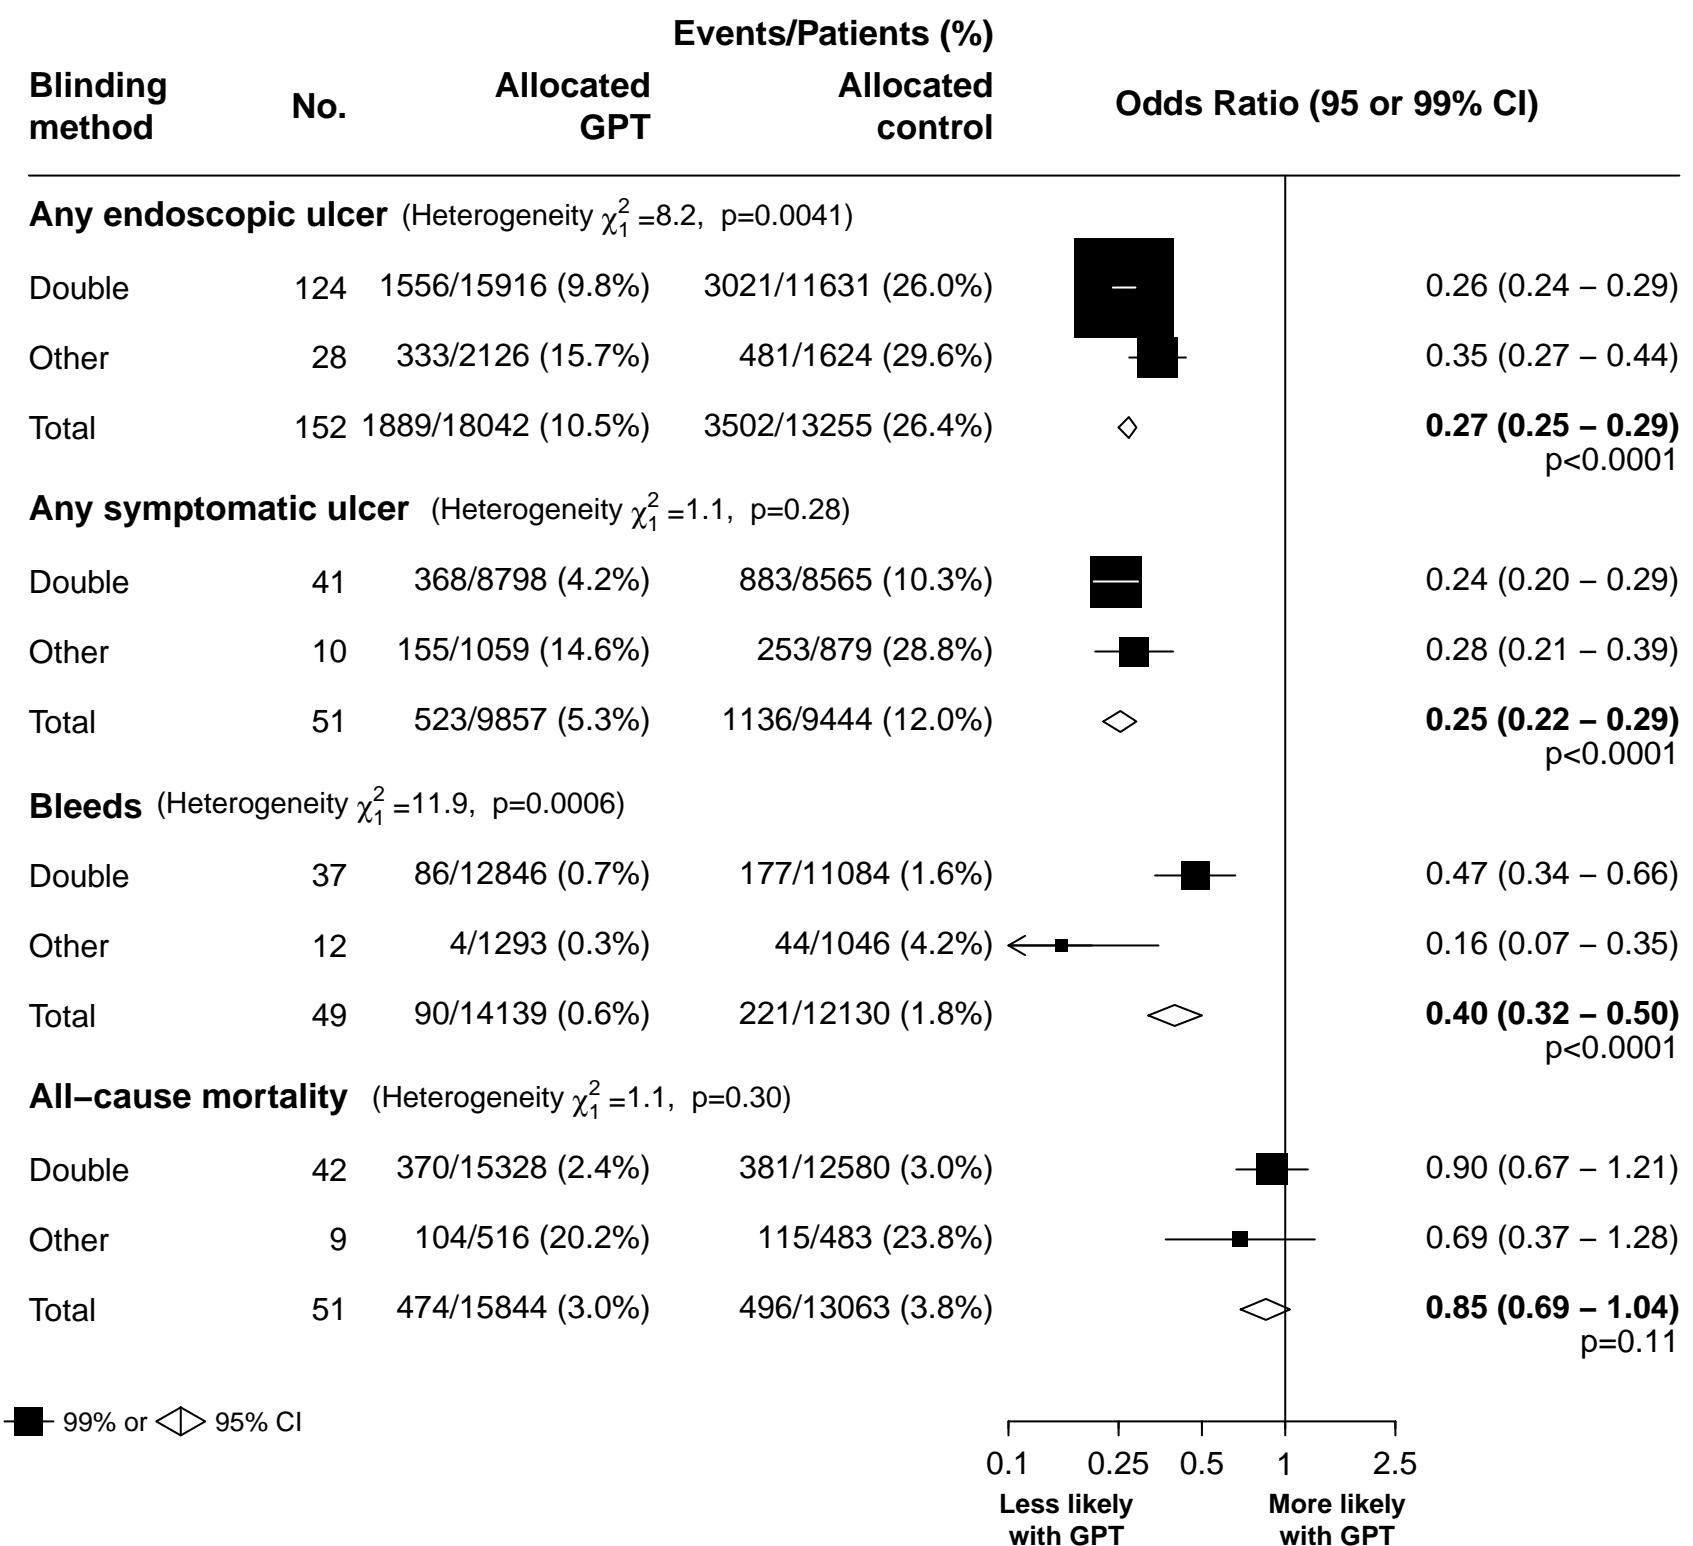

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Gastroprotectant drug

Webfigure 14a: Prevention trials – effects of gastroprotectants on endoscopic and symptomatic ulcers, bleeds and all-cause mortality, subdivided by method of allocation concealment (secure vs other method)

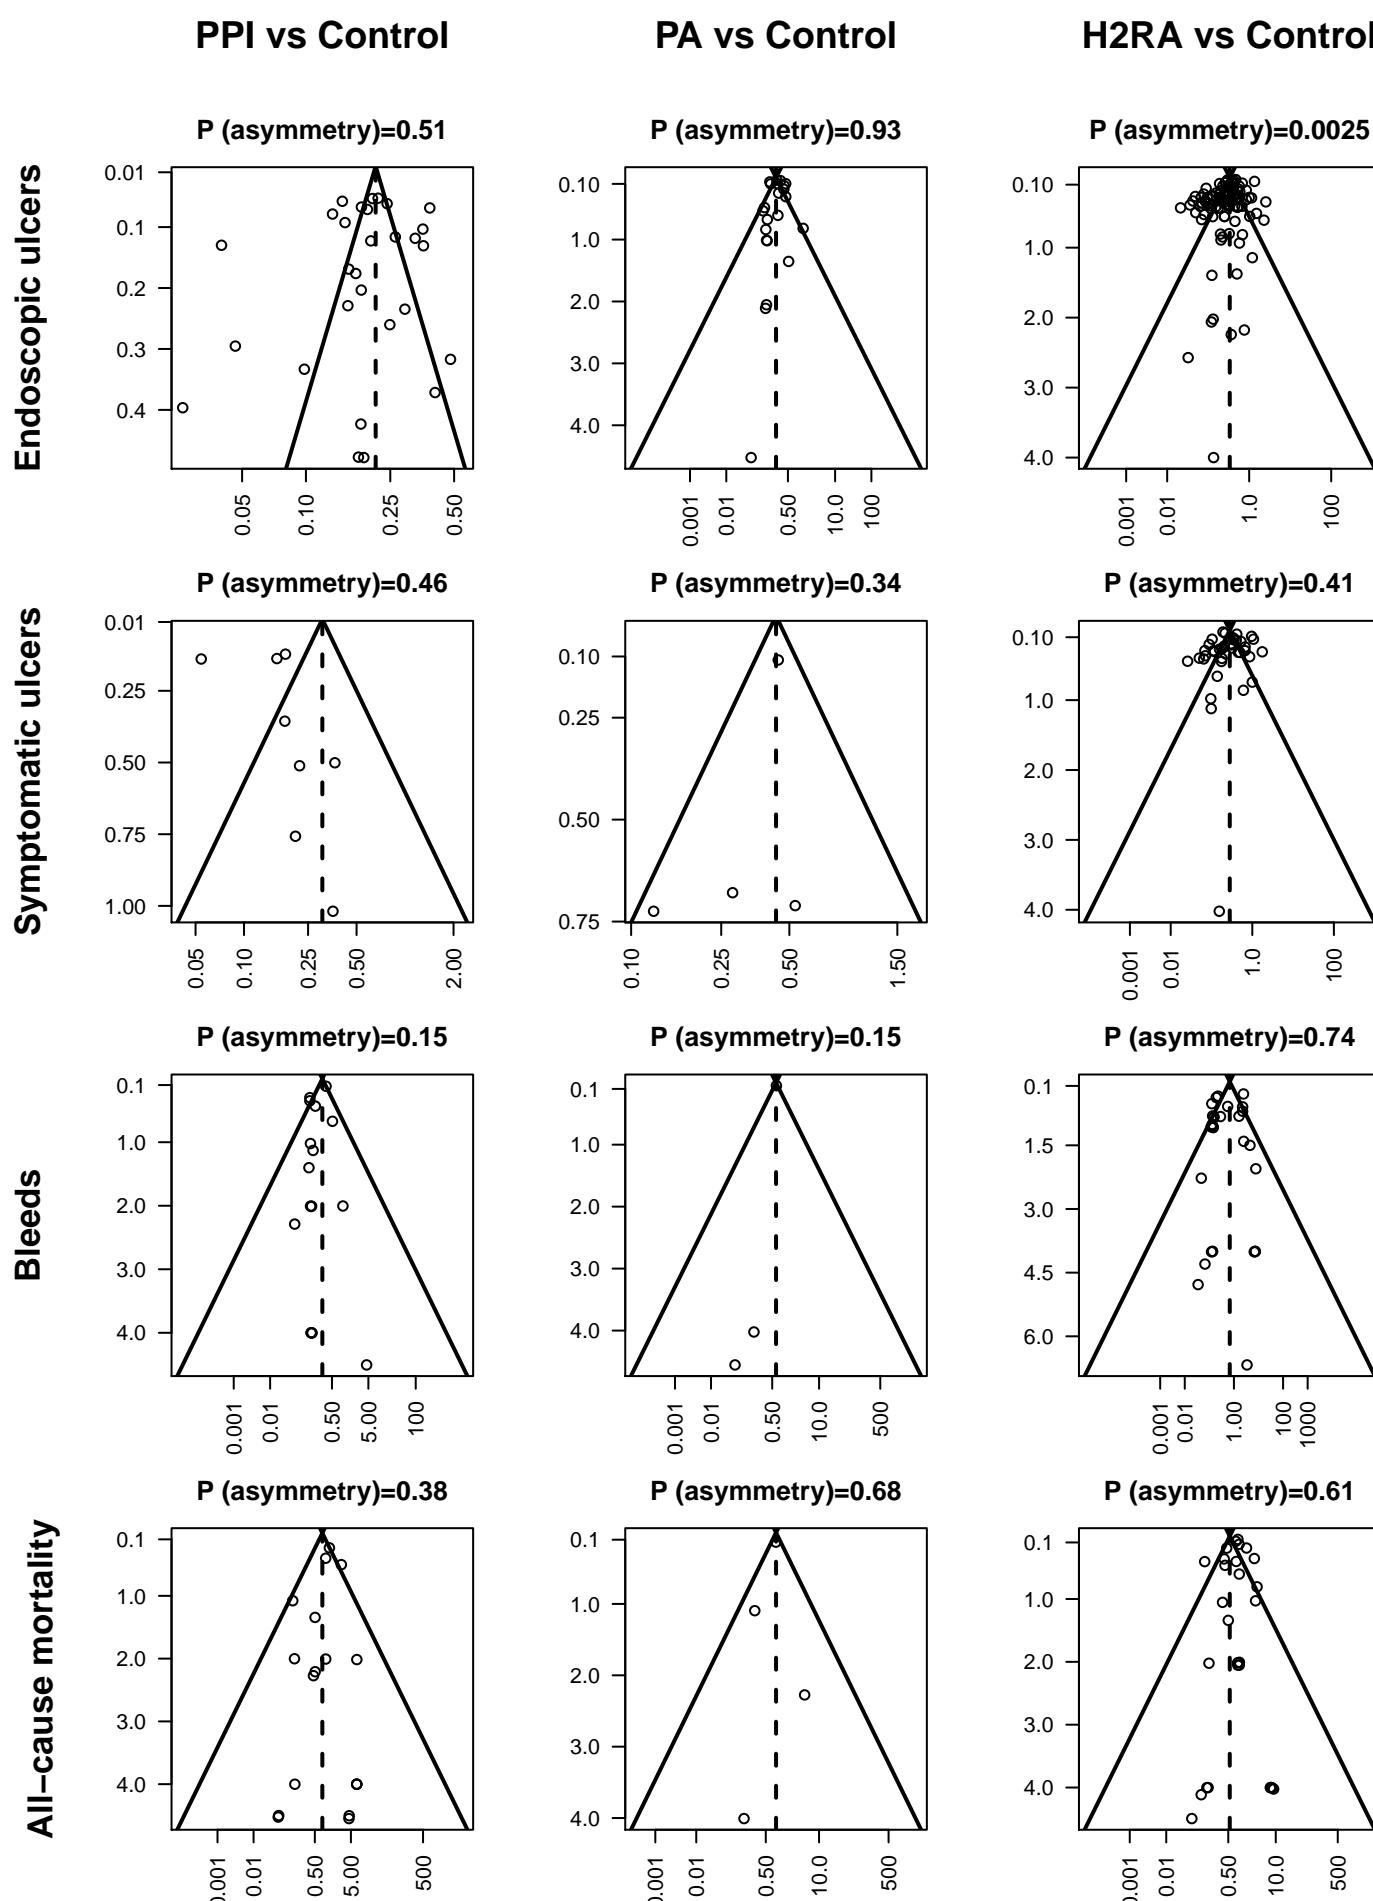

Secure methods of allocation concealment were considered to be: IVRS (Interactive Voice Response System); telephone central office; pharmacy coded containers administered sequentially; and onsite computer accessible only after entering patients details. Other methods included sealed envelopes, closed lists of random numbers, or unspecified method.

Webfigure 14b: Prevention trials – effects of gastroprotectants on endoscopic and symptomatic ulcers, bleeds and all-cause mortality, subdivided by methods of blinding of investigators and patients

Double=double-blind (ie, both patients and investigators were unaware of the treatment allocation)

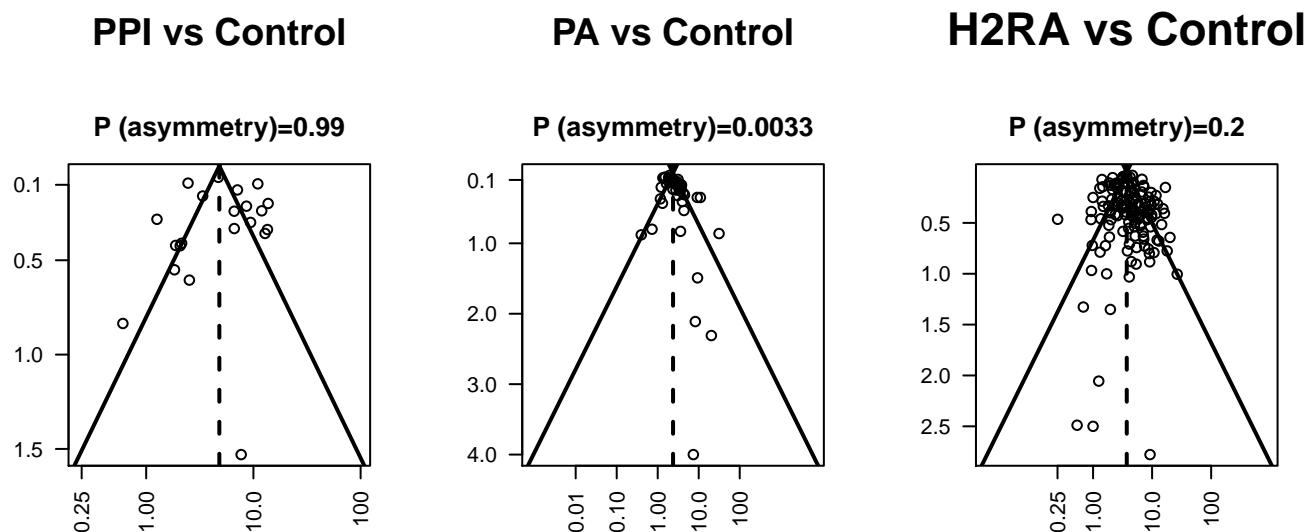

Webfigure 15a: Prevention trials – funnel plots of each gastroprotectant class vs control for particular outcomes

Each point represents the result from a single trial. In each panel, the odds ratio is shown on the x-axis (on a doubling scale) and the standard error of the log-odds ratio is shown on the y-axis. The vertical dashed line in each panel represent the information-weighted average odds ratio across the trials.

$P(\text{asymmetry})$ is the corresponding p-value of Egger's test for asymmetry of the funnel plot.

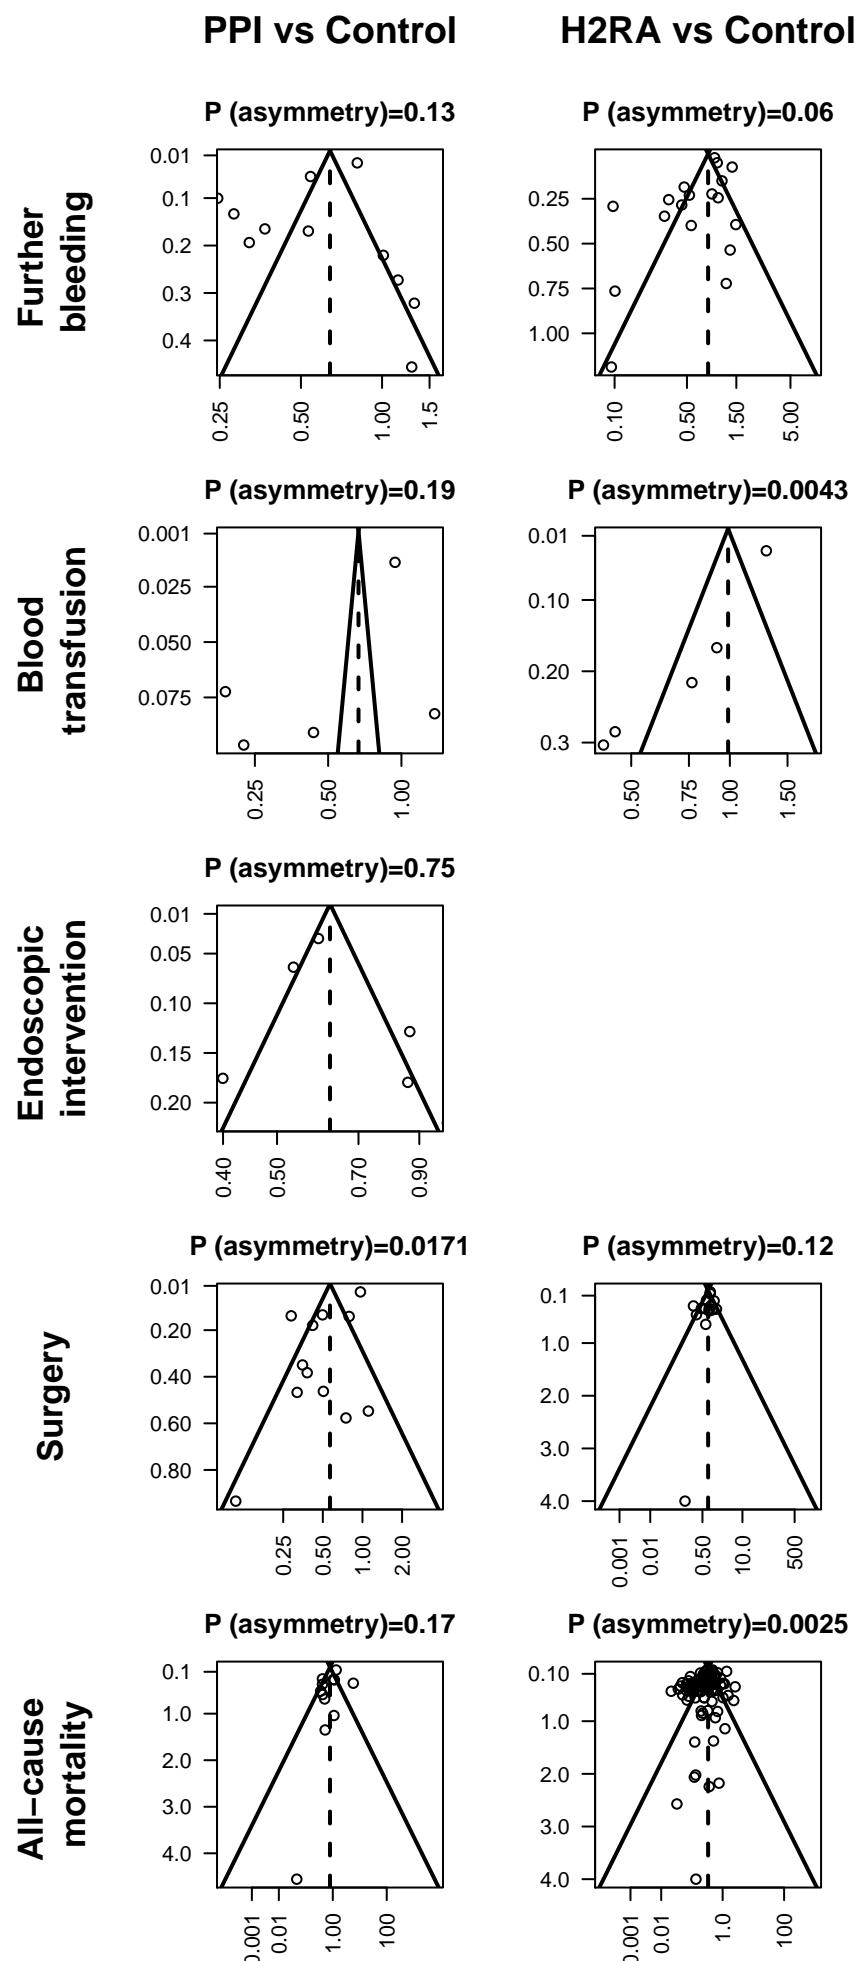

Webfigure 15b: Healing trials – funnel plots of each gastroprotectant class vs control for endoscopic ulcer healing

Each point represents the result from a single trial. In each panel, the odds ratio is shown on the x-axis (on a doubling scale) and the standard error of the log-odds ratio is shown on the y-axis. The vertical dashed line in each panel represent the information-weighted average odds ratio across the trials.

$P(\text{asymmetry})$ is the corresponding p-value of Egger's test for asymmetry of the funnel plot.

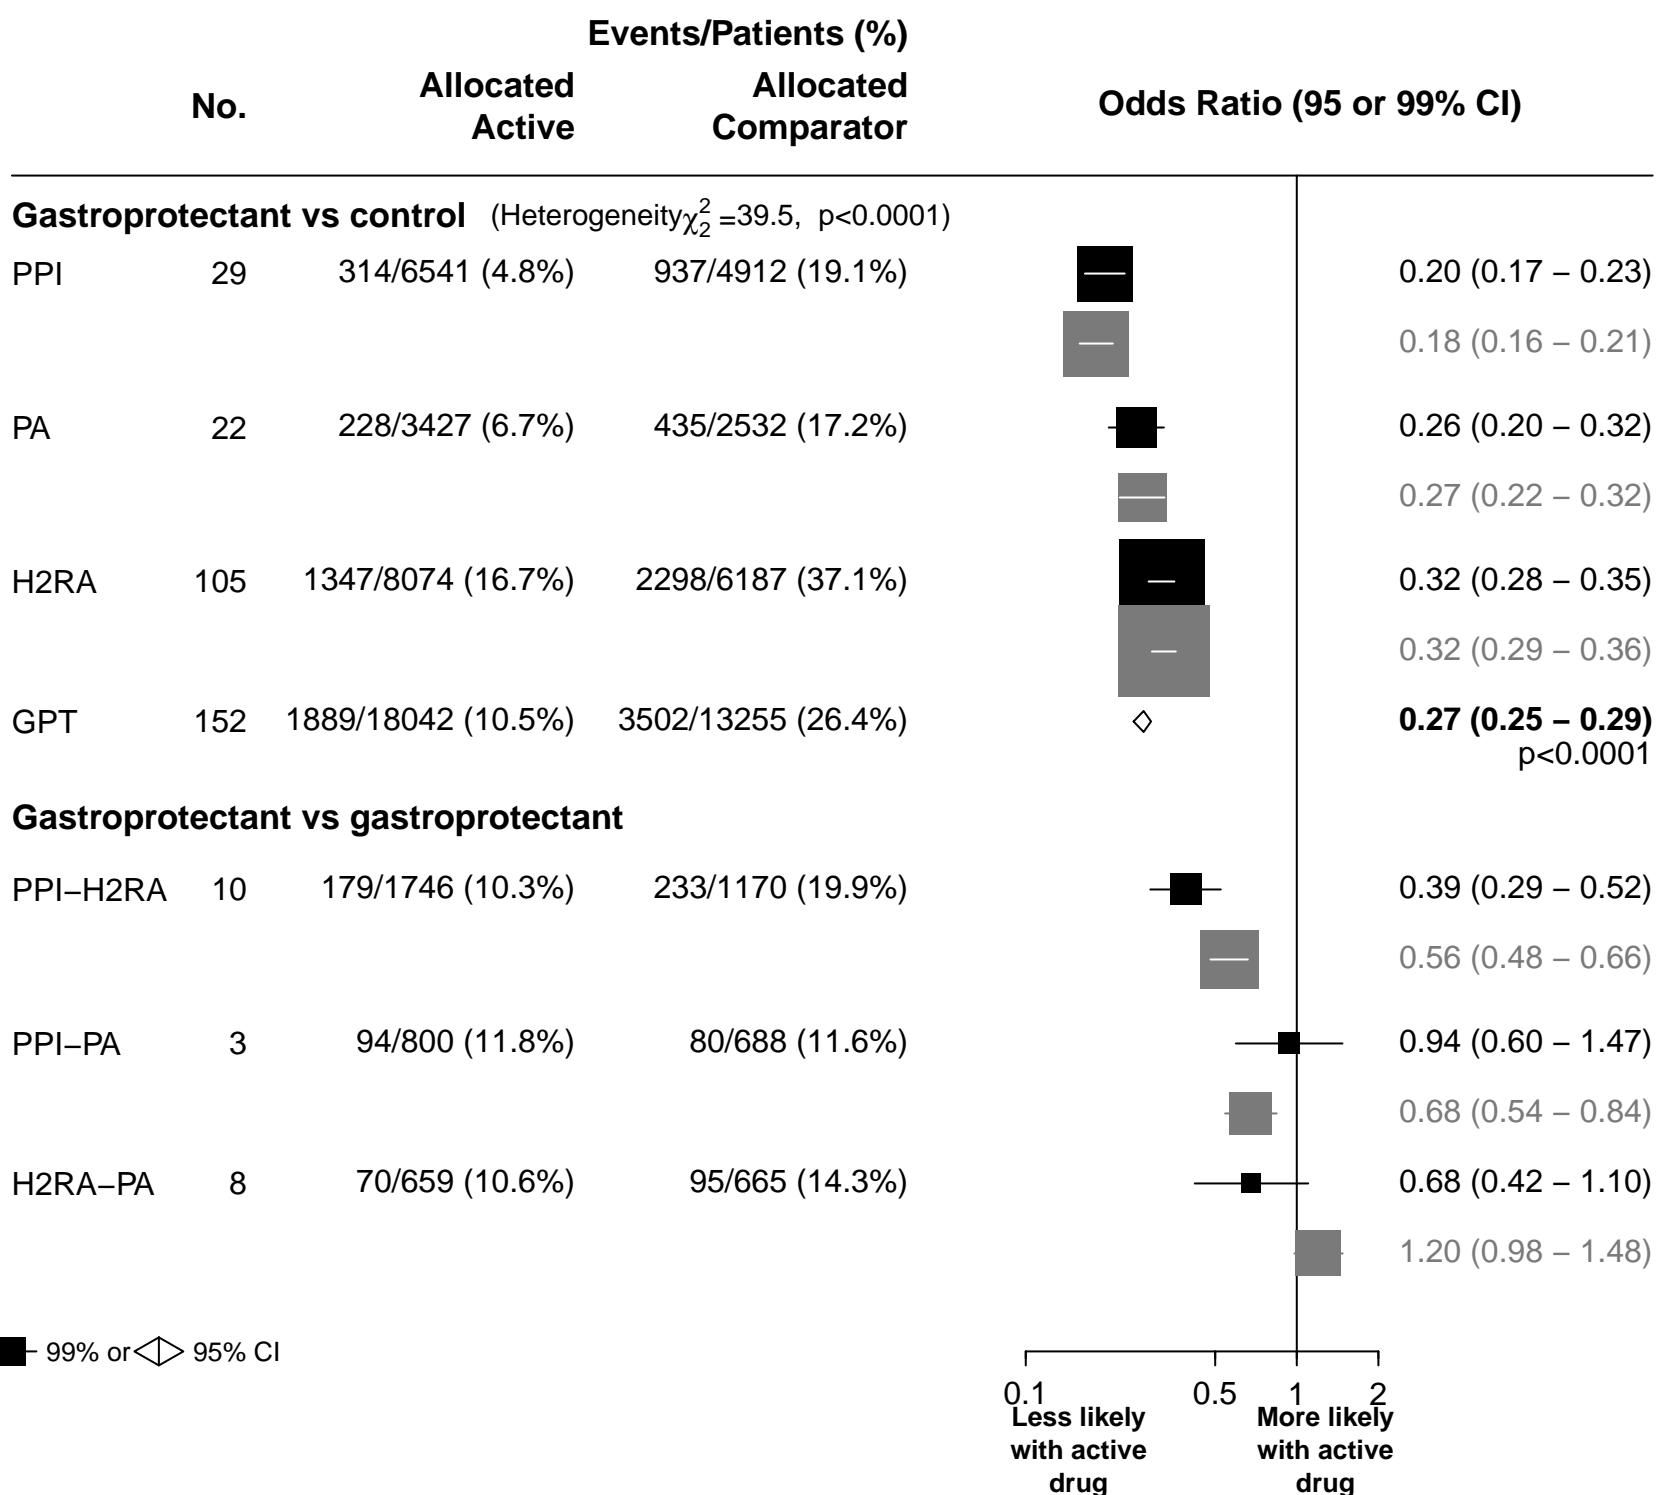

Webfigure 15c: Acute bleeding trials – funnel plots of each gastroprotectant class vs control for particular outcomes

Each point represents the result from a single trial. In each panel, the odds ratio is shown on the x-axis (on a doubling scale) and the standard error of the log-odds ratio is shown on the y-axis. The vertical dashed line in each panel represents the information-weighted average odds ratio across the trials.

$P(\text{asymmetry})$ is the corresponding p-value of Egger's test for asymmetry of the funnel plot.

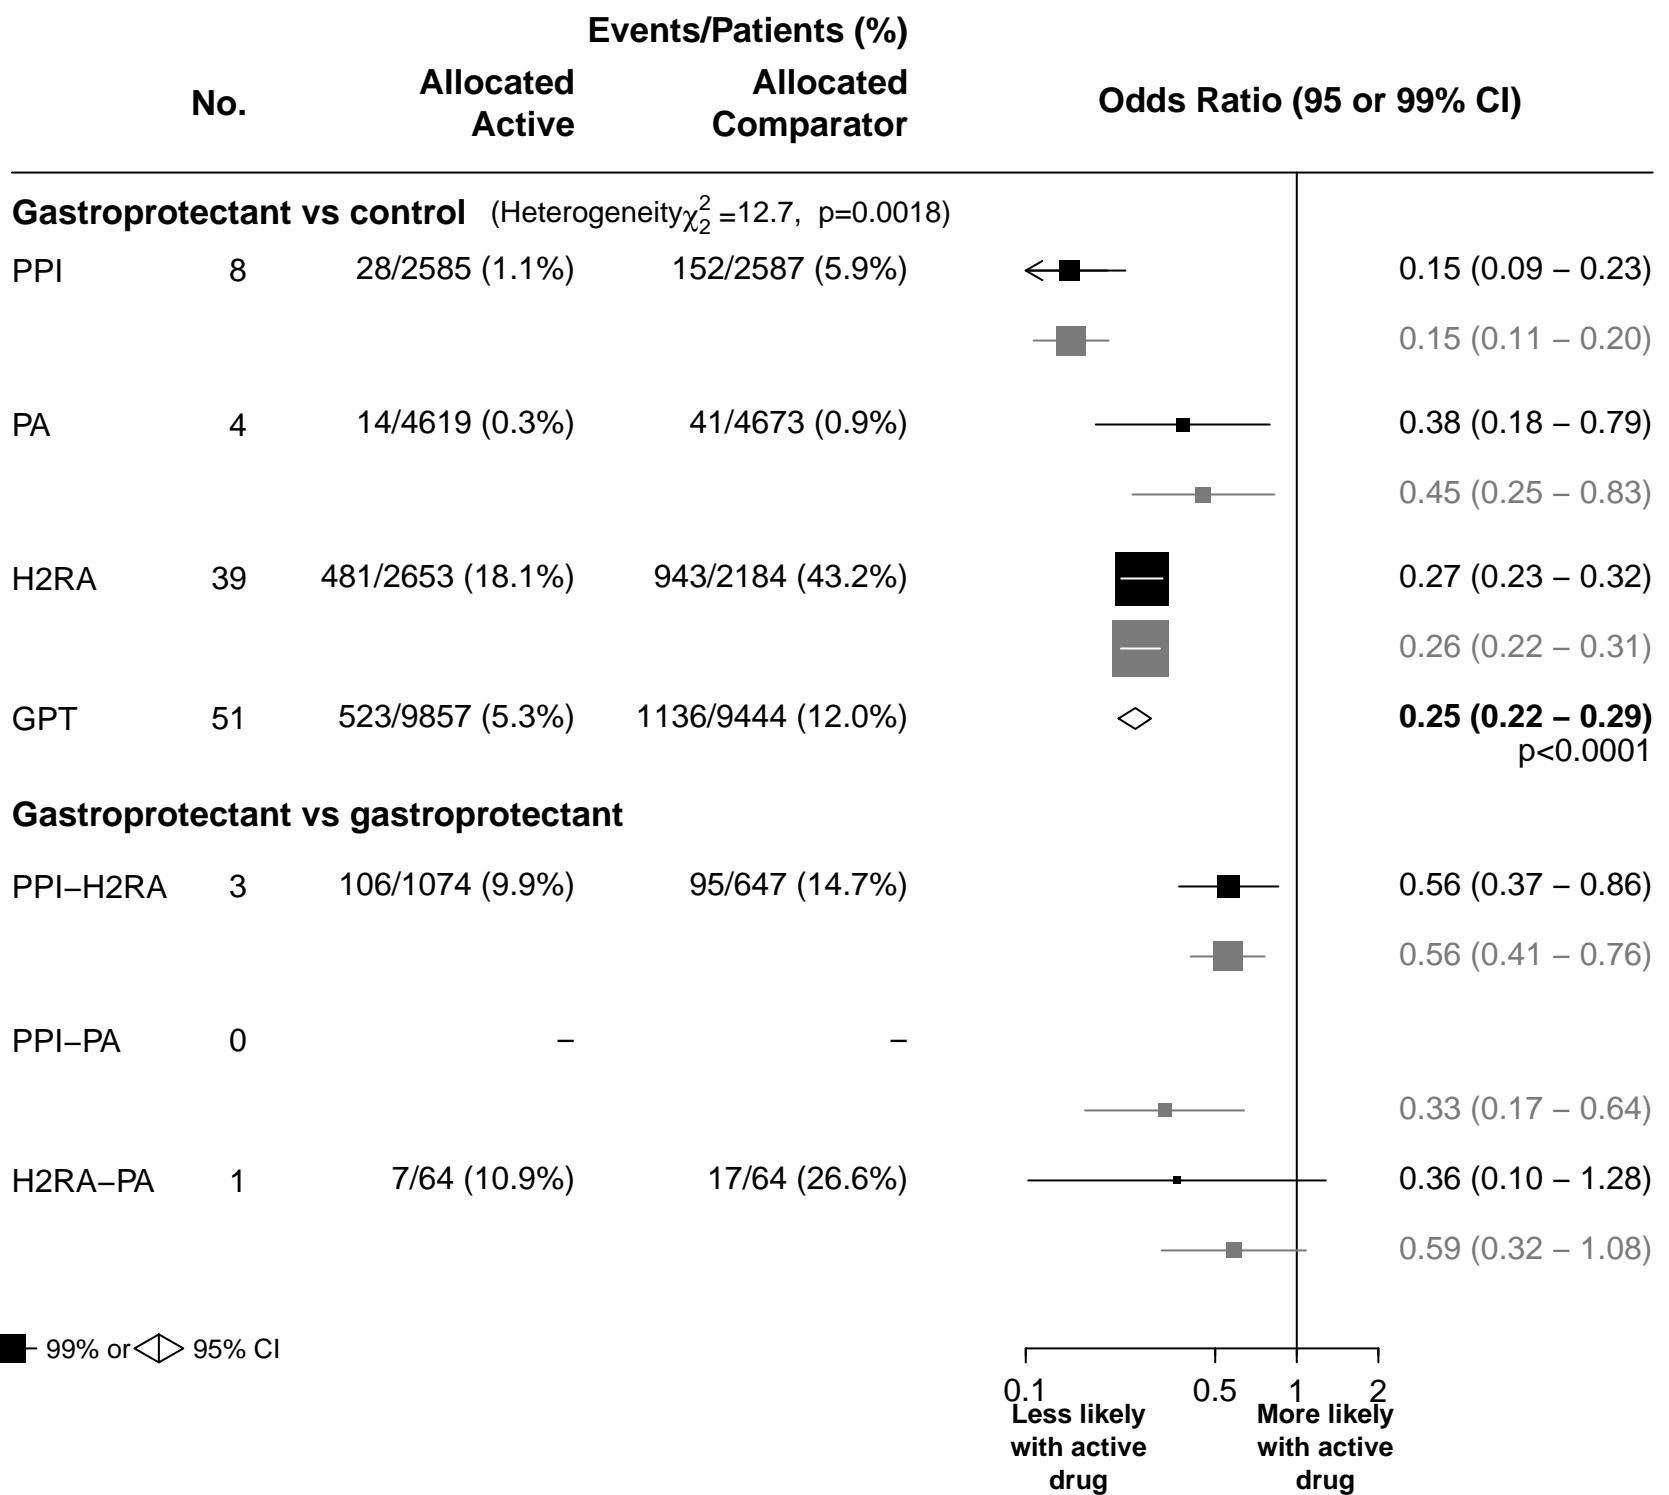

Webfigure 16a: Prevention trials – effects of gastroprotectants on any endoscopic ulcers (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

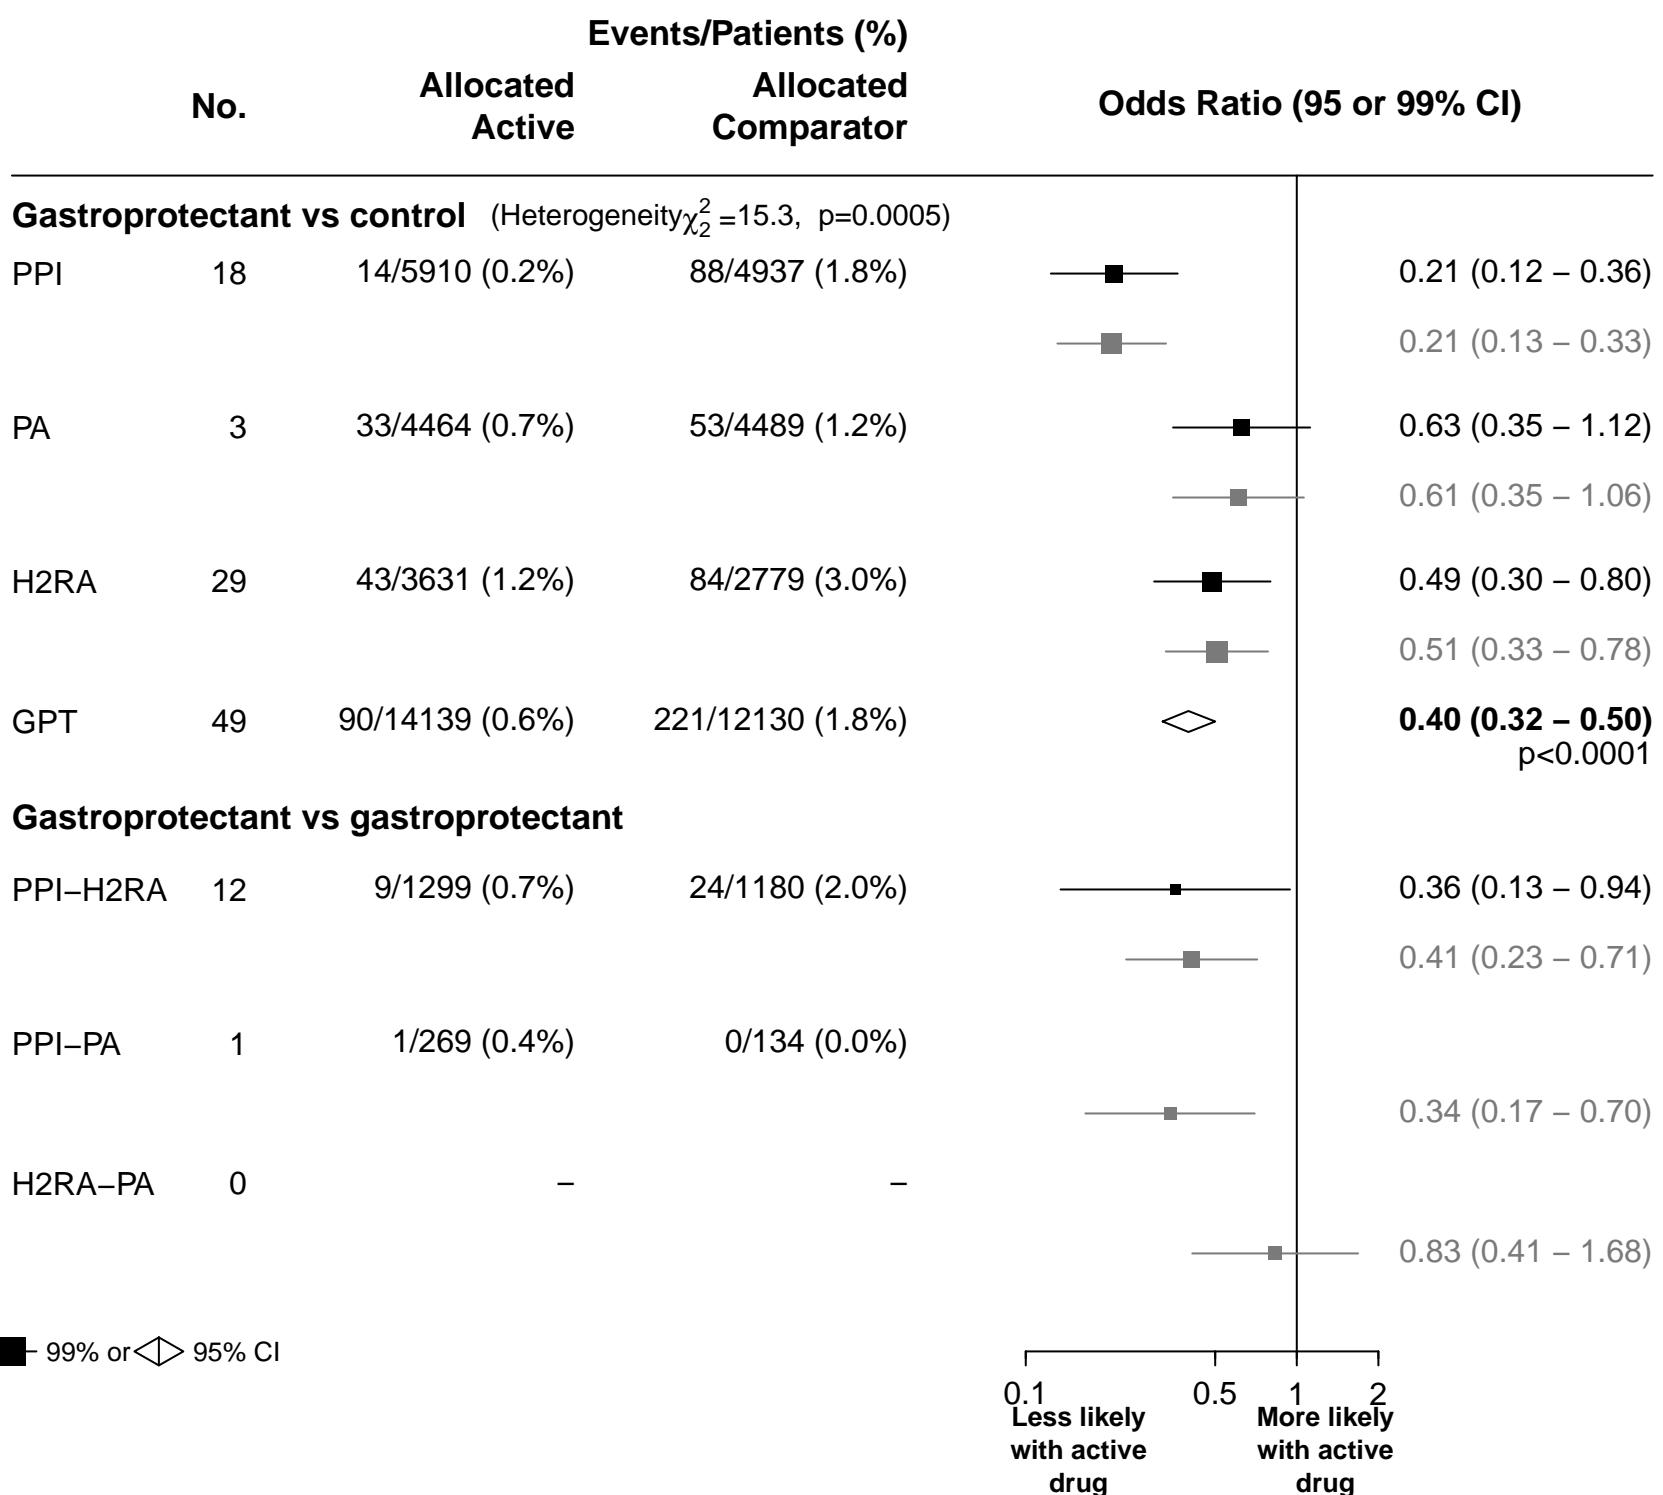

**Webfigure 16b: Prevention trials – effects of gastroprotectants on any symptomatic ulcers
(direct vs network meta-analytic effect estimates)**

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

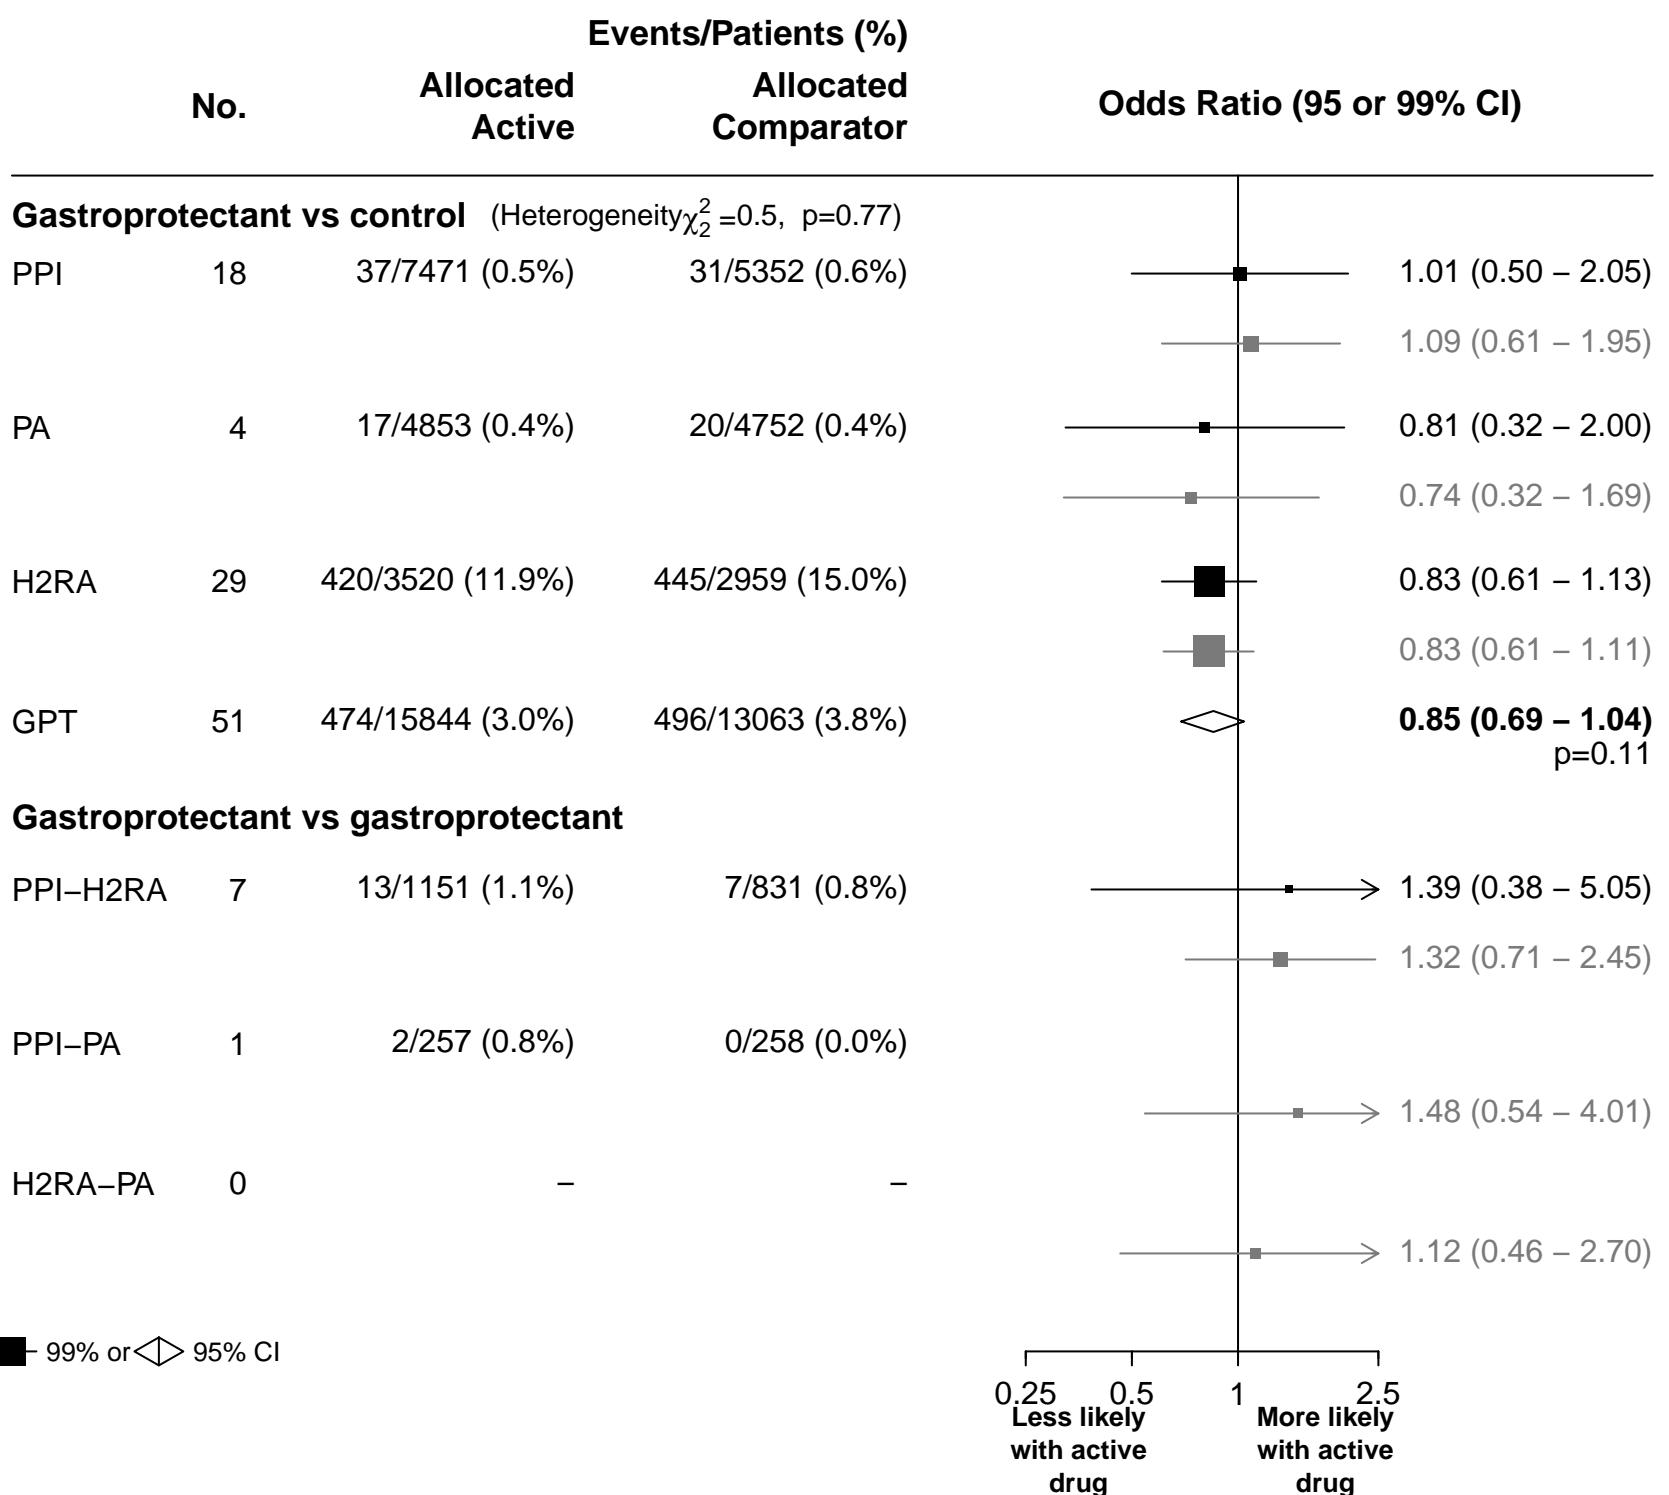

Webfigure 16c: Prevention trials – effects of gastroprotectants on bleeds (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

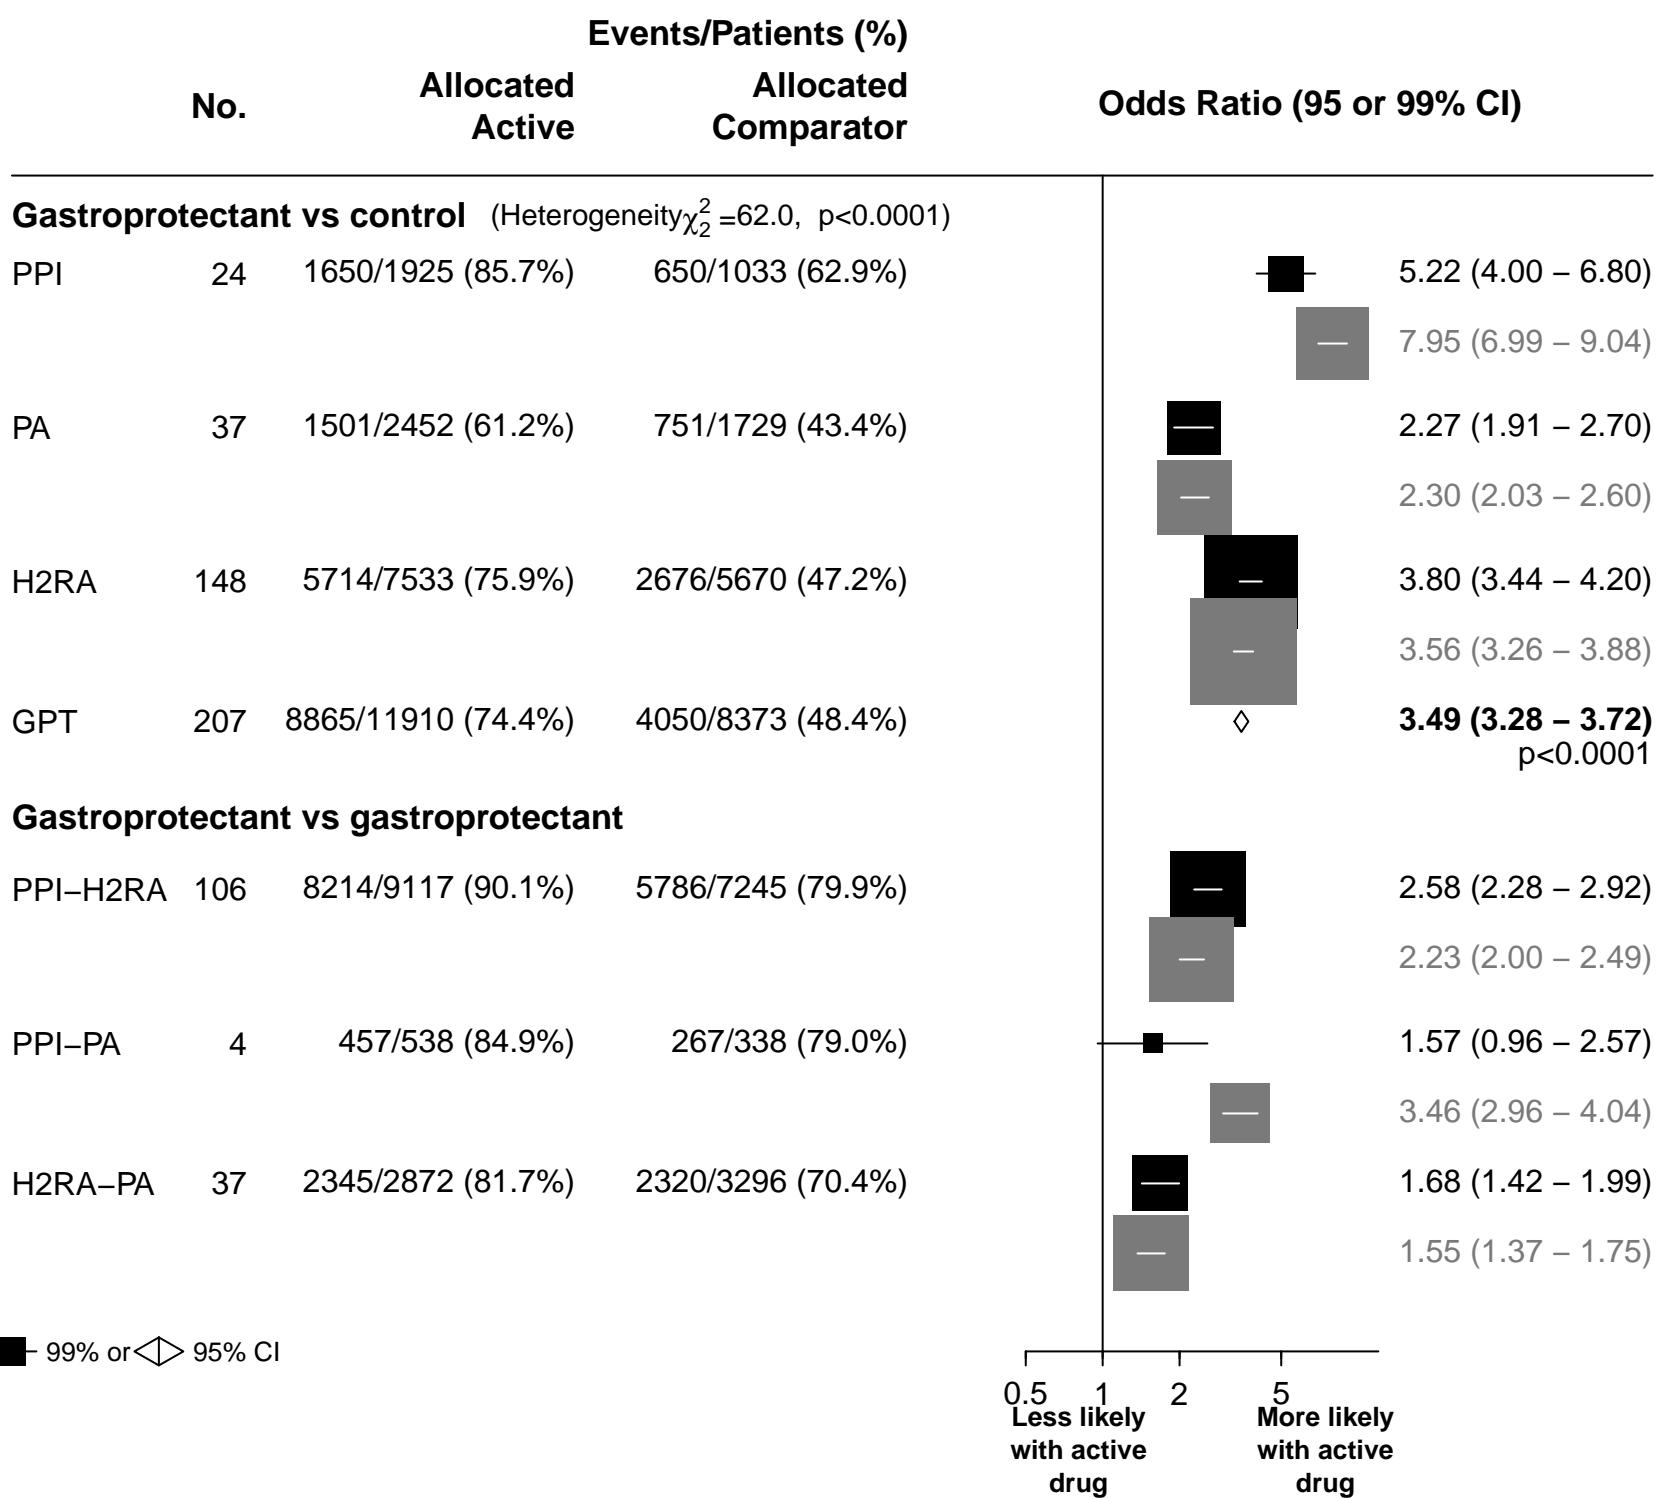

**Webfigure 16d: Prevention trials – effects of gastroprotectants on all-cause mortality
(direct vs network meta-analytic effect estimates)**

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

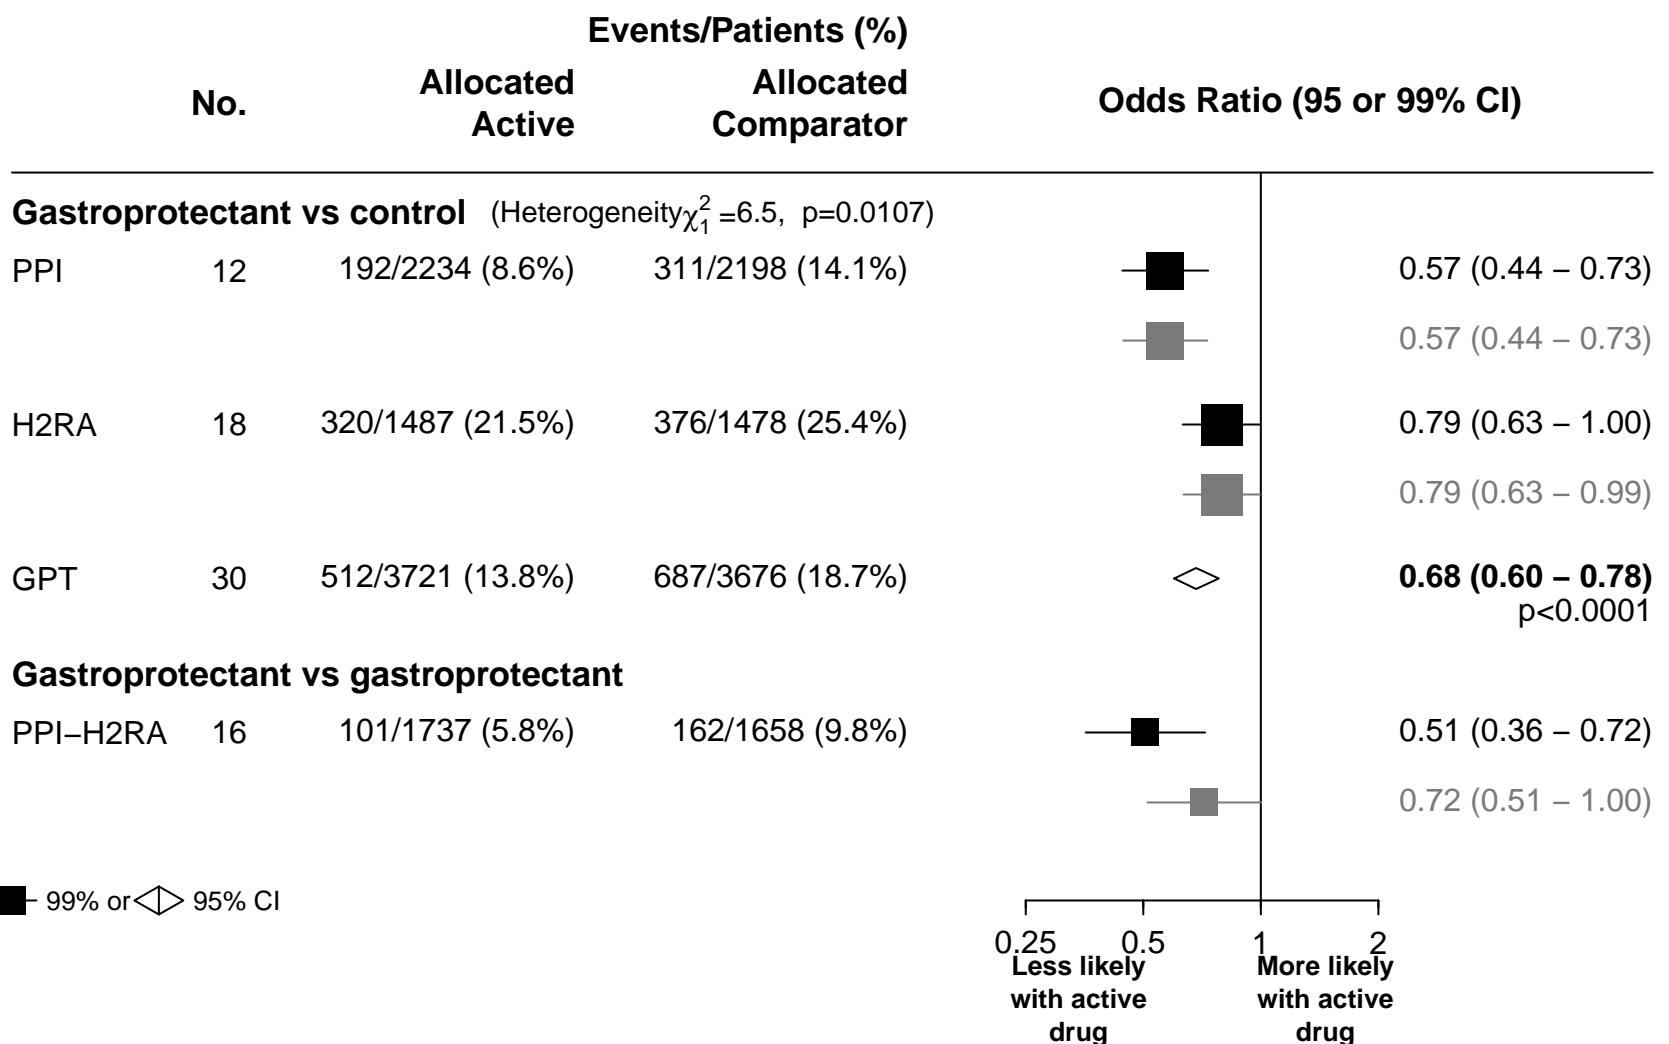

Webfigure 16e: Healing trials – effects of gastroprotectants on endoscopic ulcer healing (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, PA=Prostaglandin analogues, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

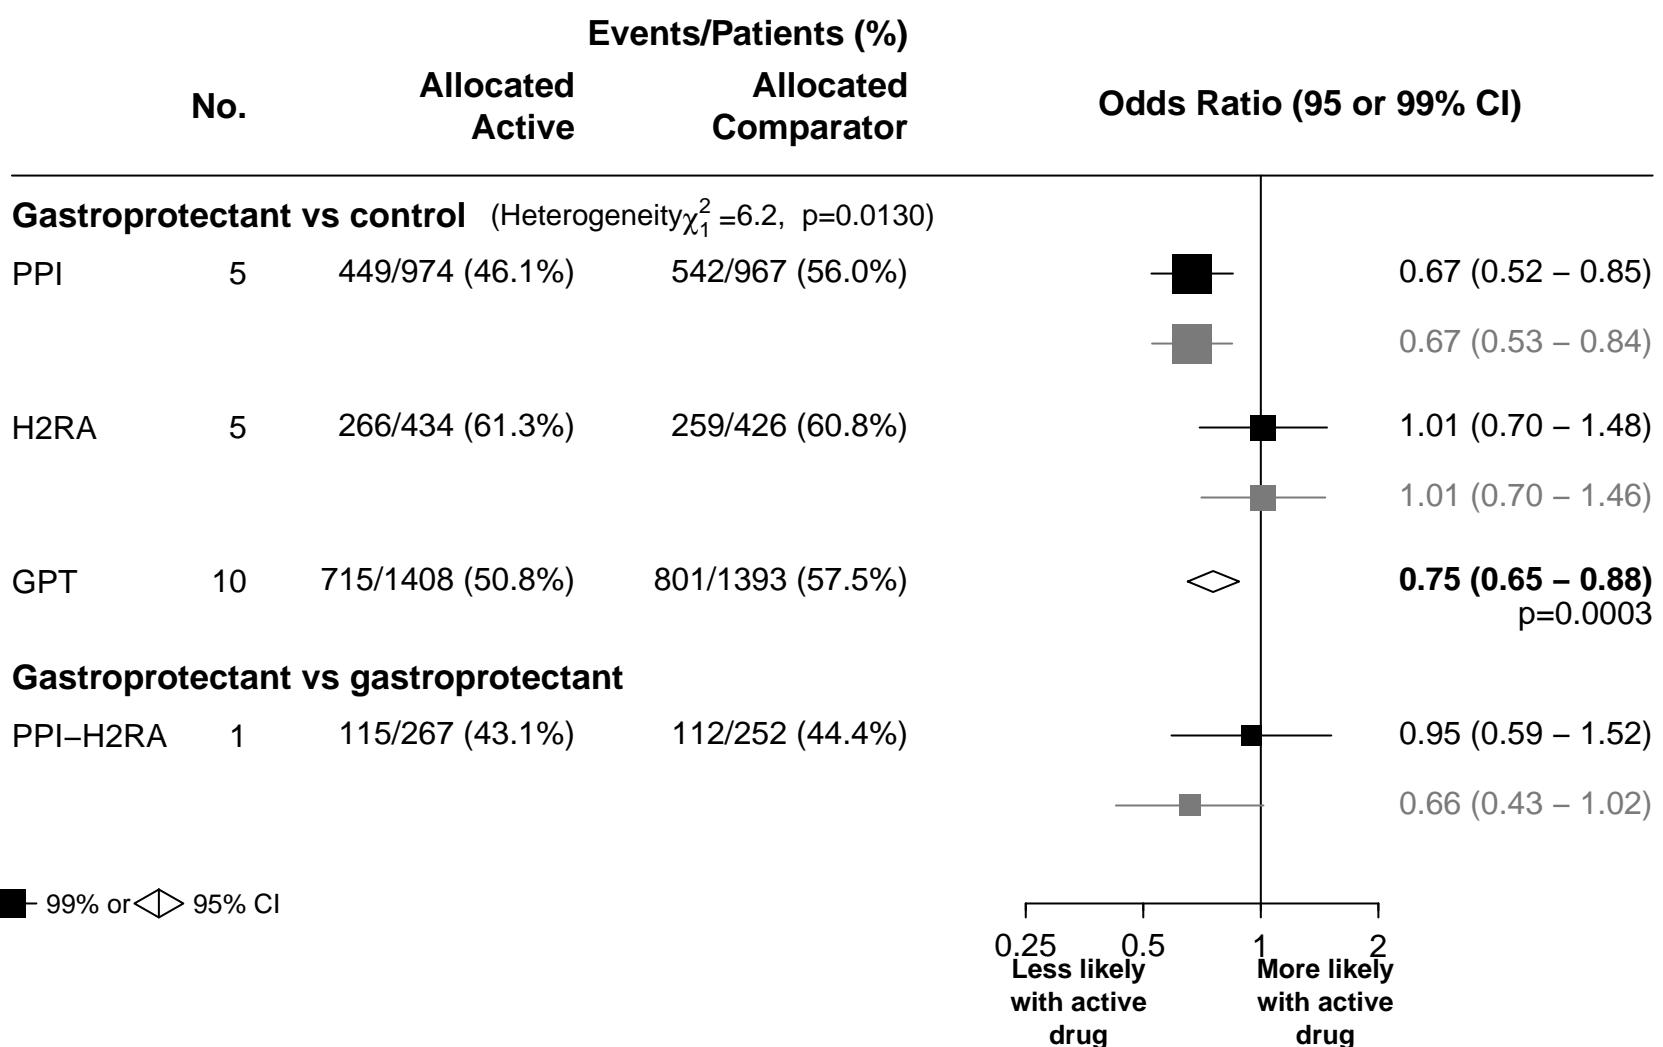

Webfigure 16f: Acute UGI bleeding treatment trials – effects of gastroprotectants on further bleeding (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

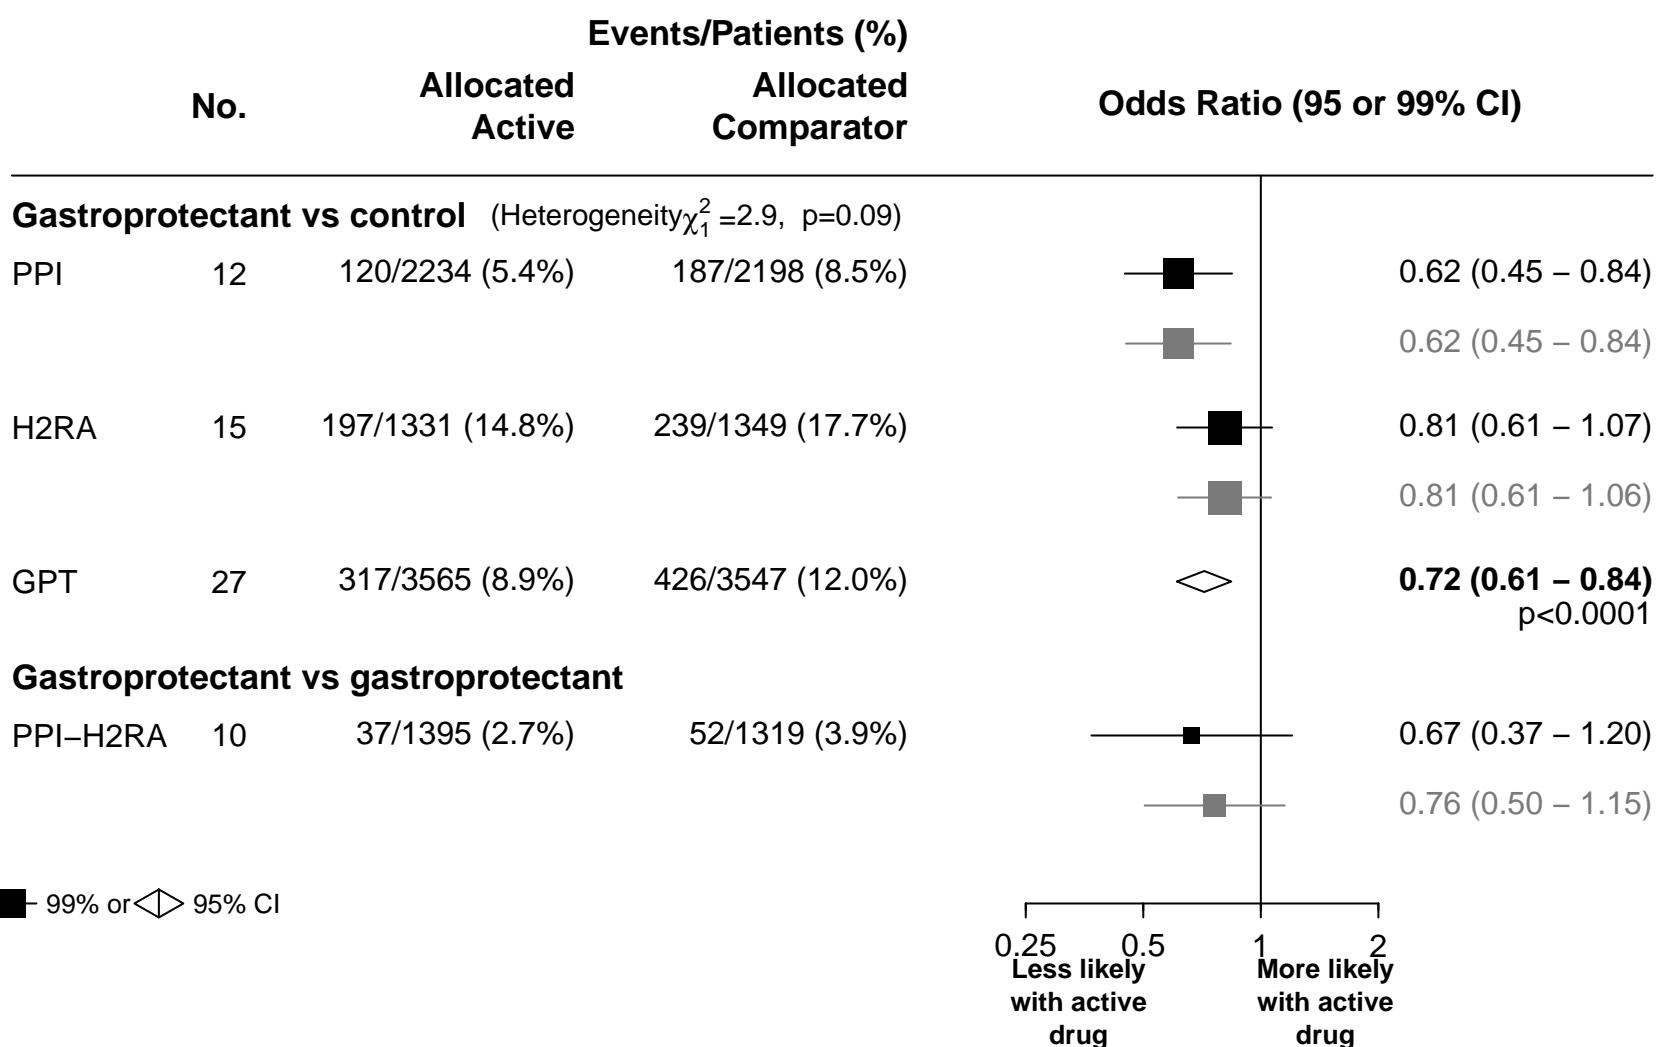

Webfigure 16g: Acute UGI bleeding treatment trials – effects of gastroprotectants on blood transfusion (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

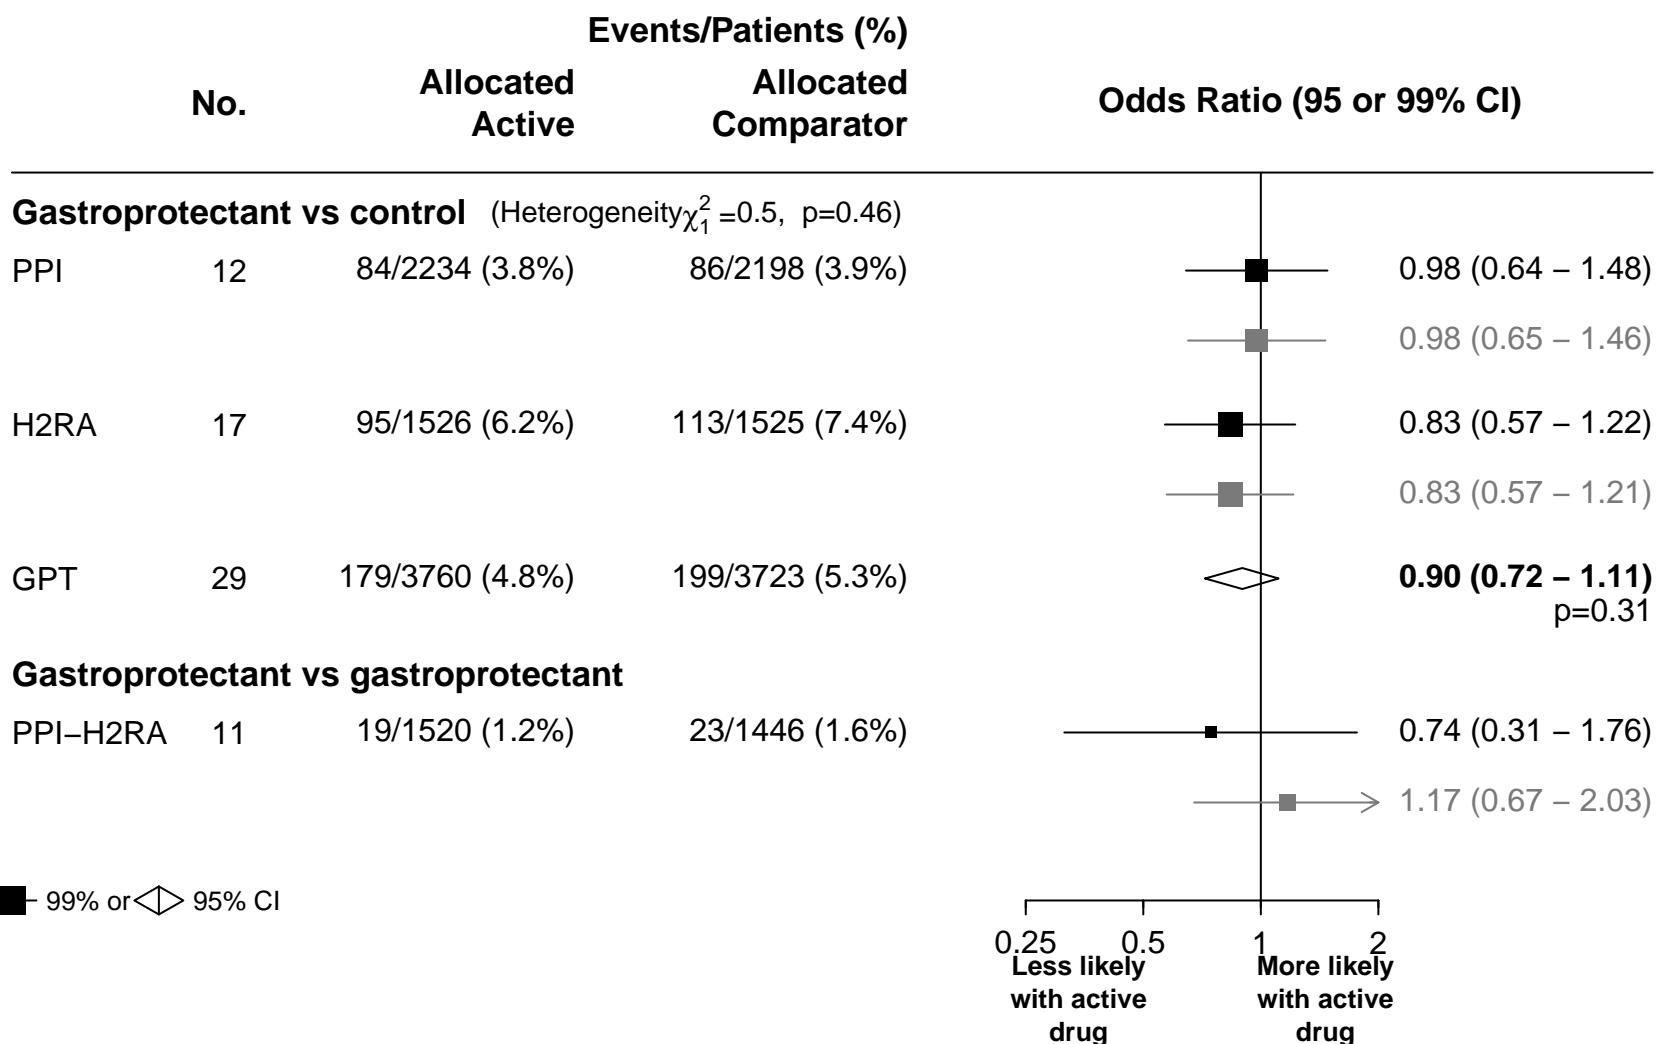

Webfigure 16h: Acute UGI bleeding treatment trials – effects of gastroprotectants on surgery (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

Webfigure 16i: Acute UGI bleeding treatment trials – effects of gastroprotectants on all-cause mortality (direct vs network meta-analytic effect estimates)

PPI=Proton pump inhibitors, H2RA=Histamine-2 receptor antagonists, GPT=Any gastroprotectant drug

Black squares and lines correspond to the direct treatment comparisons and grey squares and lines to the network meta-analysis estimates.

Electronic Search Strategy

Medline and EMBASE were searched using OVID SP for all trial publications (including protocols, results papers, abstracts, conferences proceedings and reviews) by adapting the first Cochrane Search Strategy Design (Higgins & Green 2008¹). No language restriction was applied to the search. The search was completed by LH and results were downloaded into EndNote X7 where duplicates were removed. The remaining references were initially screened on the basis of title with abstracts and full papers obtained where further information was required. Reasons for exclusion were recorded in custom fields in EndNote. The review of search results and extraction from eligible studies of pre-specified outcomes and key trial characteristics was done independently by two authors (always two of KD, HH, LH and KW). The extracted information was then entered directly into a customised database.

All eligibility criteria were decided *a priori*. Acceptable methods of concealment of allocation at the point of randomisation were: IVRS (Interactive Voice Response System); telephone central office; pharmacy coded containers administered sequentially; onsite computer accessible only after entering patient details; sealed envelopes sequentially numbered or opaque; sealed envelopes (no further information); closed list of random numbers and ‘randomised’, but method not specified. Acceptable methods of blinding were: double blind (subject and investigators unaware of allocation; single blind (subject only unaware of allocation); open (subjects and investigators aware of allocation) and not described (unknown).

Design: Parallel=parallel trial. Factorial=Factorial trial. ‘Extension’ studies are studies in which patients are randomised more than once during the trial (only the parts of the trial that involve a valid randomised comparison for this meta-analysis, labelled X1, X2 etc., are shown in this table). Data shown for crossover trials reflect only events during the first phase of the trial. The suffixes A, B, C, D are used to distinguish different trials published by the same author in the same year.

Allocation concealment: IVRS (Interactive Voice Response System); Telephone (telephone central office); Pharmacy (pharmacy coded containers administered sequentially); Onsite computer (onsite computer accessible only after entering patient details); Sealed envelopes (sequentially numbered, opaque or without further specification); Closed list (closed list of random numbers); Other (other specified method); Unspecified (stated as being ‘randomised’ but with no other details).

Blinding of investigators and patients: Single=single-blind; Double=double-blind; Open=open label.

Availability of data: Data available for at least one endpoint of interest in the meta-analyses.

In cases where the number randomised was not reported, the number evaluated was used instead. In addition, for crossover trials, where neither the number randomised nor the number evaluated was reported, the total number of participants divided by number of arms was used.

Webtable 2: Details of trials involving a randomised comparison of a prostaglandin analogue (X) versus control (Y)

Webtable 2 (cont.): Details of trials involving a randomised comparison of a prostaglandin analogue (X) versus control (Y)

Trial name	Regimen	Ref.	Indication for treatment	Design	Allocation Concealment	Blinding of investigators and patients	Availability of data	No. of patients	
								NX	NY
Other PA vs Control									
Chen 1980 B	1.5 mg	w341	Peptic ulcers	Parallel	Unspecified method	Double	Yes	19	16

Design: Parallel=parallel trial. Factorial=Factorial trial. 'Extension' studies are studies in which patients are randomised more than once during the trial (only the parts of the trial that involve a valid randomised comparison for this meta-analysis, labelled X1, X2 etc., are shown in this table). Data shown for crossover trials reflect only events during the first phase of the trial. The suffixes A, B, C, D are used to distinguish different trials published by the same author in the same year.

Allocation concealment: IVRS (Interactive Voice Response System); Telephone (telephone central office); Pharmacy (pharmacy coded containers administered sequentially); Onsite computer (onsite computer accessible only after entering patient details); Sealed envelopes (sequentially numbered, opaque or without further specification); Closed list (closed list of random numbers); Other (other specified method); Unspecified (stated as being 'randomised' but with no other details).

Blinding of investigators and patients: Single=single-blind; Double=double-blind; Open=open label.

Availability of data: Data available for at least one endpoint of interest in the meta-analyses.

In cases where the number randomised was not reported, the number evaluated was used instead. In addition, for crossover trials, where neither the number randomised nor the number evaluated was reported, the total number of participants divided by number of arms was used.

Webtable 3: Details of trials involving a randomised comparison of a histamine-2 receptor antagonists (X) versus control (Y)

Braverman 1986	400 mg	w655	Peptic ulcers	Parallel	Unspecified method	Double	Yes	182	168							
Young 1989 A	400 mg	w656	Peptic ulcers	Parallel	Unspecified method	Double	Yes	182	168							
Gray 1978 (incompletely healed ulcers)	400 mg	w414	Peptic ulcers	Parallel	Unspecified method	Double	Yes	3	3							
Domschke 1976	800 mg	w657	Peptic ulcers	Parallel	Unspecified method	Double	No	-	-							
Frank 1989 B	800 mg	w658	Peptic ulcers	Parallel	Pharmacy	Double	Yes	83	80							
Braverman 1986	800 mg	w655	Peptic ulcers	Parallel	Unspecified method	Double	Yes	165	168							
Bodemar 1976	800 mg	w659	Peptic ulcers	Parallel	Unspecified method	Double	No	15	15							
Frank 1989 A	800 mg	w660	Peptic ulcers	Parallel	Unspecified method	Double	Yes	92	94							
Bodemar 1979 B	800 mg	w442	Peptic ulcers	Parallel	Unspecified method	Double	Yes	15	14							
Mosci 1989	800 mg	w661	Peptic ulcers	Parallel	Unspecified method	Double	Yes	26	26							
Tay 1988	800 mg	w662	Peptic ulcers	Parallel	Other method	Double	Yes	17	15							
Young 1989 A	800 mg	w656	Peptic ulcers	Parallel	Unspecified method	Double	Yes	165	168							
Moshal 1977	800 mg	w663	Peptic ulcers	Parallel	Unspecified method	Double	Yes	19	19							
Hoffenberg 1985	800 mg	w664	Peptic ulcers	Parallel	Pharmacy	Double	Yes	24	22							
Isenberg 1982	900 mg	w665	Peptic ulcers	Parallel	Unspecified method	Double	No	35	31							
Hentschel 1979	1000 mg	w666	Peptic ulcers	Parallel	Unspecified method	Double	Yes	32	31							
Garbøl 1979	1000 mg	w667	Peptic ulcers	Parallel	Closed list	Double	Yes	23	25							
Tárnok 1980	1000 mg	w668	Peptic ulcers	Parallel	Unspecified method	Unknown	Yes	22	20							
Sonnenberg 1979 X1	1000 mg	w379	Peptic ulcers	Extension	Unspecified method	Double	Yes	31	32							
Peter 1978	1000 mg	w669	Peptic ulcers	Parallel	Unspecified method	Double	Yes	38	40							
Fica 1987	1000 mg	w670	Peptic ulcers	Parallel	Unspecified method	Unknown	Yes	20	20							
Bongiorno 1983	1000 mg	w671	Peptic ulcers	Parallel	Unspecified method	Double	Yes	30	30							
Marini 1980	1000 mg	w672	Peptic ulcers	Parallel	Pharmacy	Double	Yes	18	18							
Mazure 1980	1000 mg	w673	Peptic ulcers	Parallel	Unspecified method	Double	Yes	20	20							
Lam 1983	1000 mg	w674	Peptic ulcers	Parallel	Unspecified method	Open	Yes	40	20							
Eichenberger 1982 X1	1000 mg	w388	Peptic ulcers	Extension	Unspecified method	Double	Yes	23	23							
Dobrilla 1980	1000 mg	w675	Peptic ulcers	Parallel	Unspecified method	Double	Yes	17	15							
Danielsson 1980 X1	1000 mg	w676	Peptic ulcers	Parallel	Unspecified method	Double	Yes	25	25							
Ström 1981	1000 mg	w677	Peptic ulcers	Parallel	Unspecified method	Double	Yes	24	24							
Corinaldesi 1980	1000 mg	w678	Peptic ulcers	Parallel	Unspecified method	Unknown	No	12	12							
Johannessen 1986	1000 mg	w679	Peptic ulcers	Parallel	Unspecified method	Double	Yes	24	24							
Barakat 1984 A	1000 mg	w359	Peptic ulcers	Parallel	Unspecified method	Double	Yes	40	39							
Dawson 1984 X1	1000 mg	w564	Peptic ulcers	Extension	Unspecified method	Single	Yes	20	20							
Frost 1977 X1	1000 mg	w680	Peptic ulcers	Extension	Unspecified method	Double	Yes	27	24							
Giger 1979	1000 mg	w681	Peptic ulcers	Parallel	Unspecified method	Double	Yes	16	18							
Ciclitira 1977	1000 mg	w682	Peptic ulcers	Parallel	Unspecified method	Double	Yes	35	27							
Bianchi Porro 1982	1000 mg	w683	Peptic ulcers	Parallel	Pharmacy	Double	Yes	30	30							
Buligescu 1985	1000 mg	w684	Peptic ulcers	Parallel	Unspecified method	Double	Yes	20	20							
Gotthard 1982 (prepyloric ulcer)	1000 mg	w685	Peptic ulcers	Parallel	Unspecified method	Double	Yes	12	12							
Gray 1977	1000 mg	w686	Peptic ulcers	Parallel	Unspecified method	Double	Yes	20	20							
Gotthard 1982 (duodenal ulcer)	1000 mg	w685	Peptic ulcers	Parallel	Unspecified method	Double	Yes	18	18							
Grewal 1979	1000 mg	w687	Peptic ulcers	Parallel	Unspecified method	Double	Yes	25	25							
Marini 1981	1000 mg	w688	Peptic ulcers	Parallel	Unspecified method	Double	Yes	10	10							
Gotlieb-Jensen 1983	1000 mg	w689	Peptic ulcers	Parallel	Unspecified method	Double	Yes	21	21							
Kennedy 1978	1000 mg	w690	Peptic ulcers	Parallel	Unspecified method	Double	Yes	12	12							
Giacosa 1982	1000 mg	w691	Peptic ulcers	Parallel	Unspecified method	Open	Yes	30	29							
Monnis 1988	1000 mg	w692	Peptic ulcers	Parallel	Unspecified method	Double	Yes	12	11							
Mukhtar 1982	1000 mg	w693	Peptic ulcers	Parallel	Unspecified method	Double	Yes	19	19							
Guha Mazumdar 1981	1000 mg	w694	Peptic ulcers	Parallel	Unspecified method	Double	No	24	26							
Popoola 1978 (duodenal ulcer)	1000 mg	w474	Peptic ulcers	Parallel	Unspecified method	Double	Yes	12	9

Design: Parallel=parallel trial. Factorial=Factorial trial. 'Extension' studies are studies in which patients are randomised more than once during the trial (only the parts of the trial that involve a valid randomised comparison for this meta-analysis, labelled X1, X2 etc., are shown in this table). Data shown for crossover trials reflect only events during the first phase of the trial. The suffixes A, B, C, D are used to distinguish different trials published by the same author in the same year.

Allocation concealment: IVRS (Interactive Voice Response System); Telephone (telephone central office); Pharmacy (pharmacy coded containers administered sequentially); Onsite computer (onsite computer accessible only after entering patient details); Sealed envelopes (sequentially numbered, opaque or without further specification); Closed list (closed list of random numbers); Other (other specified method); Unspecified (stated as being 'randomised' but with no other details).

Blinding of investigators and patients: Single=single-blind; Double=double-blind; Open=open label.

Availability of data: Data available for at least one endpoint of interest in the meta-analyses.

In cases where the number randomised was not reported, the number evaluated was used instead. In addition, for crossover trials, where neither the number randomised nor the number evaluated was reported, the total number of participants divided by number of arms was used.

Webtable 4: Details of trials involving a randomised comparison of a proton pump inhibitor (X) versus a prostaglandin analogue (Y)

Design: Parallel=parallel trial. Factorial=Factorial trial. ‘Extension’ studies are studies in which patients are randomised more than once during the trial (only the parts of the trial that involve a valid randomised comparison for this meta-analysis, labelled X1, X2 etc., are shown in this table). Data shown for crossover trials reflect only events during the first phase of the trial. The suffixes A, B, C, D are used to distinguish different trials published by the same author in the same year.

Allocation concealment: IVRS (Interactive Voice Response System); Telephone (telephone central office); Pharmacy (pharmacy coded containers administered sequentially); Onsite computer (onsite computer accessible only after entering patient details); Sealed envelopes (sequentially numbered, opaque or without further specification); Closed list (closed list of random numbers); Other (other specified method); Unspecified (stated as being ‘randomised’ but with no other details).

Blinding of investigators and patients: Single=single-blind; Double=double-blind; Open=open label.

Availability of data: Data available for at least one endpoint of interest in the meta-analyses.

In cases where the number randomised was not reported, the number evaluated was used instead. In addition, for crossover trials, where neither the number randomised nor the number evaluated was reported, the total number of participants divided by number of arms was used.

Webtable 6: Details of trials involving a randomised comparison of a histamine-2 receptor antagonist (X) versus a prostaglandin analogue (Y)
