Figure S1

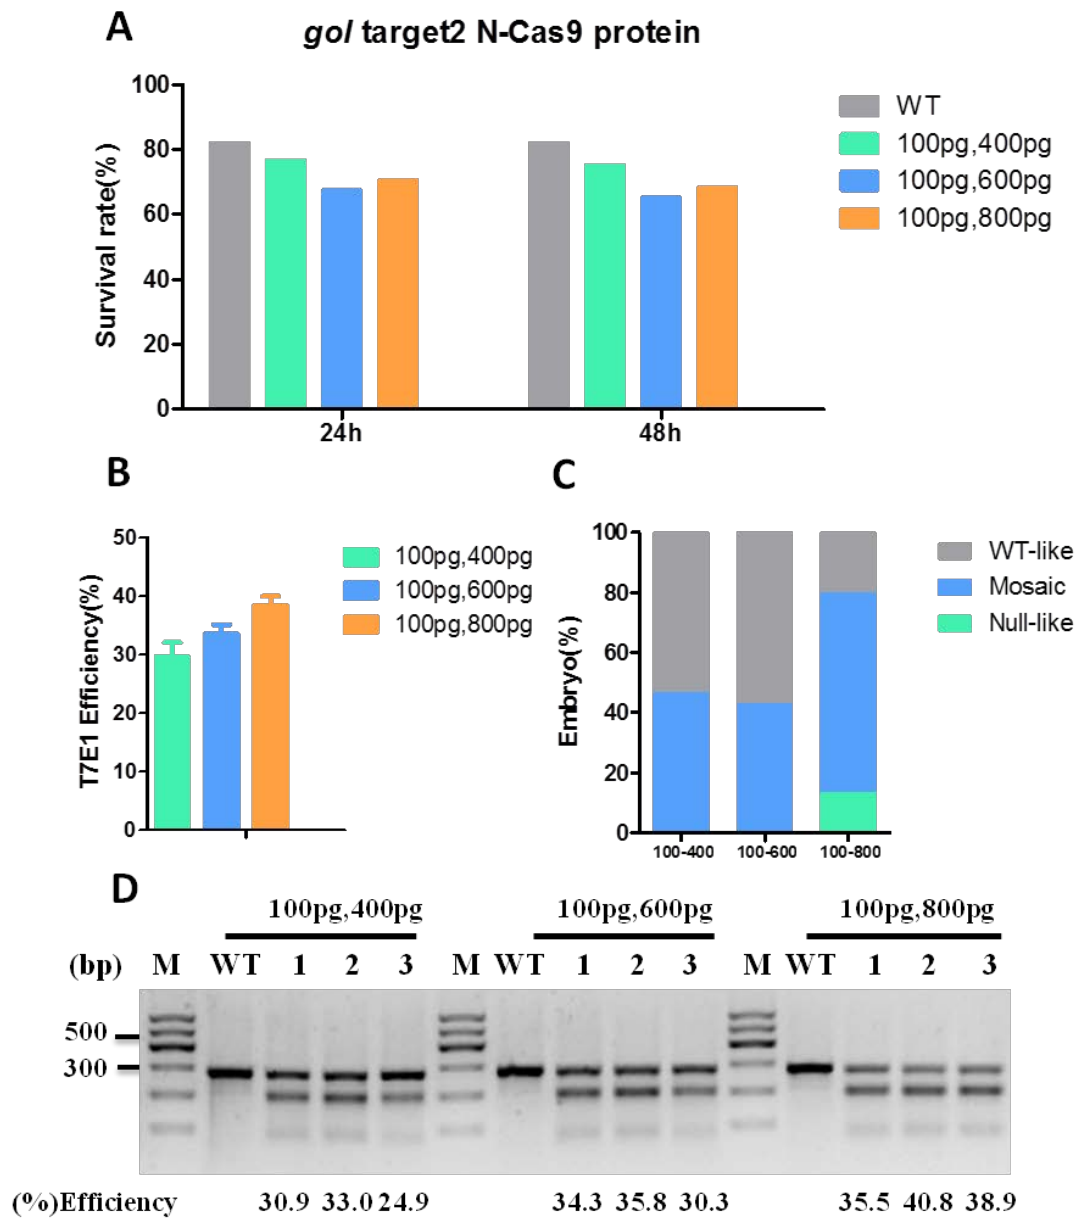

Figure S1 Survival rates of zebrafish embryos injected N-NLS-fused Cas9 protein and 100pg of gRNA targeting the *gol target2* (A), and T7E1 assays of the rates of mutagenesis (B and D, $P < 0.05$) and proportions of embryos with each phenotype (C) for *gol target 2*.

Figure S2

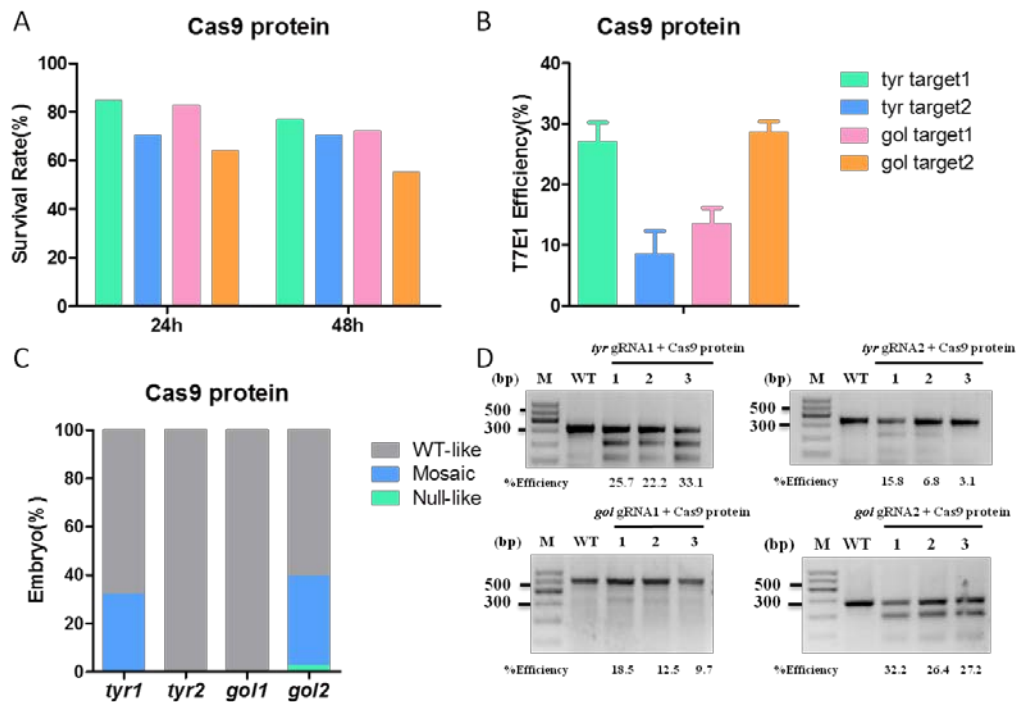

Figure S2 Knockout efficiency of the Cas9 proteins without NLS for four loci of *tyr* and *gol* gene. Survival rates of zebrafish embryos(A) and T7E1 assays of the rates of mutagenesis for each loci(B and D). (C) Proportions of embryos with each phenotype.

Figure S3

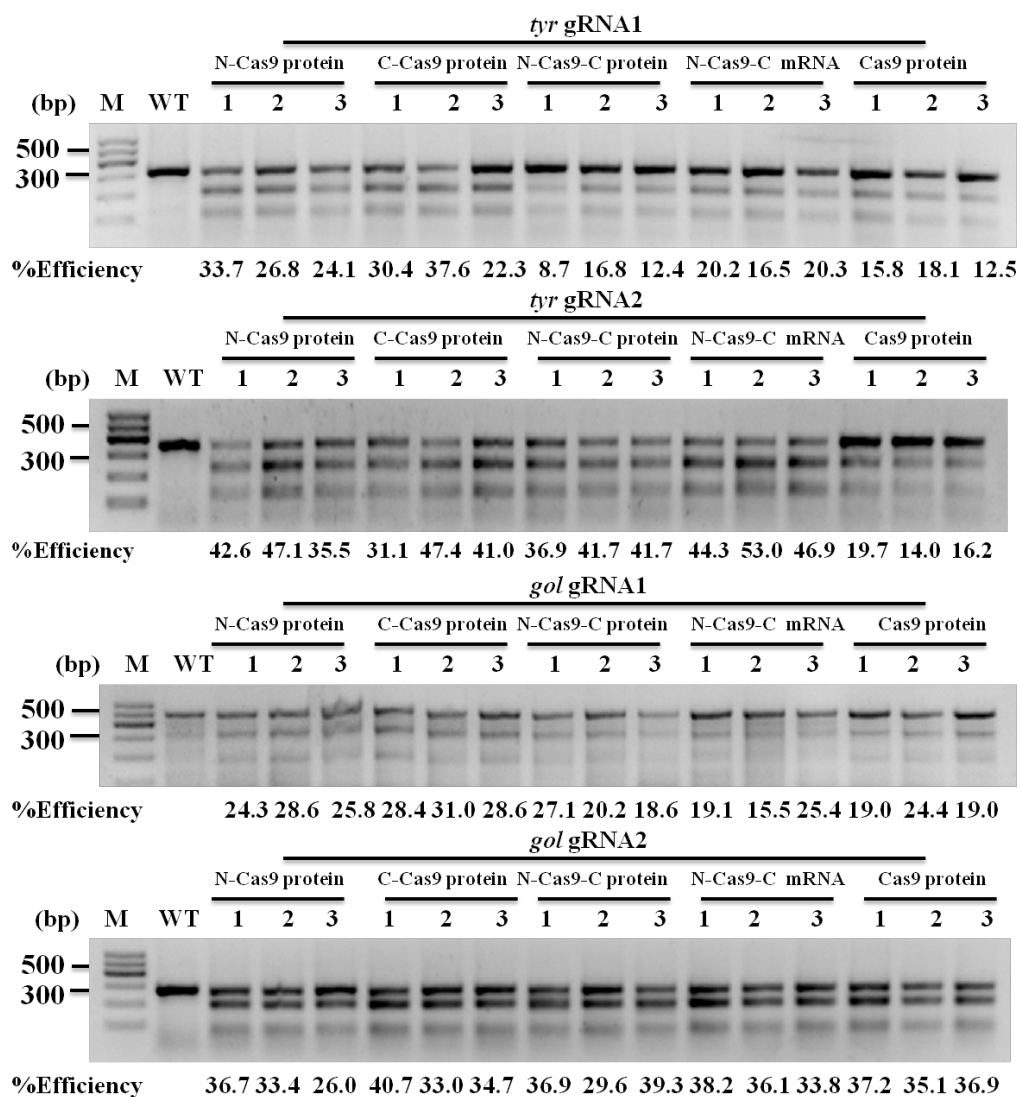

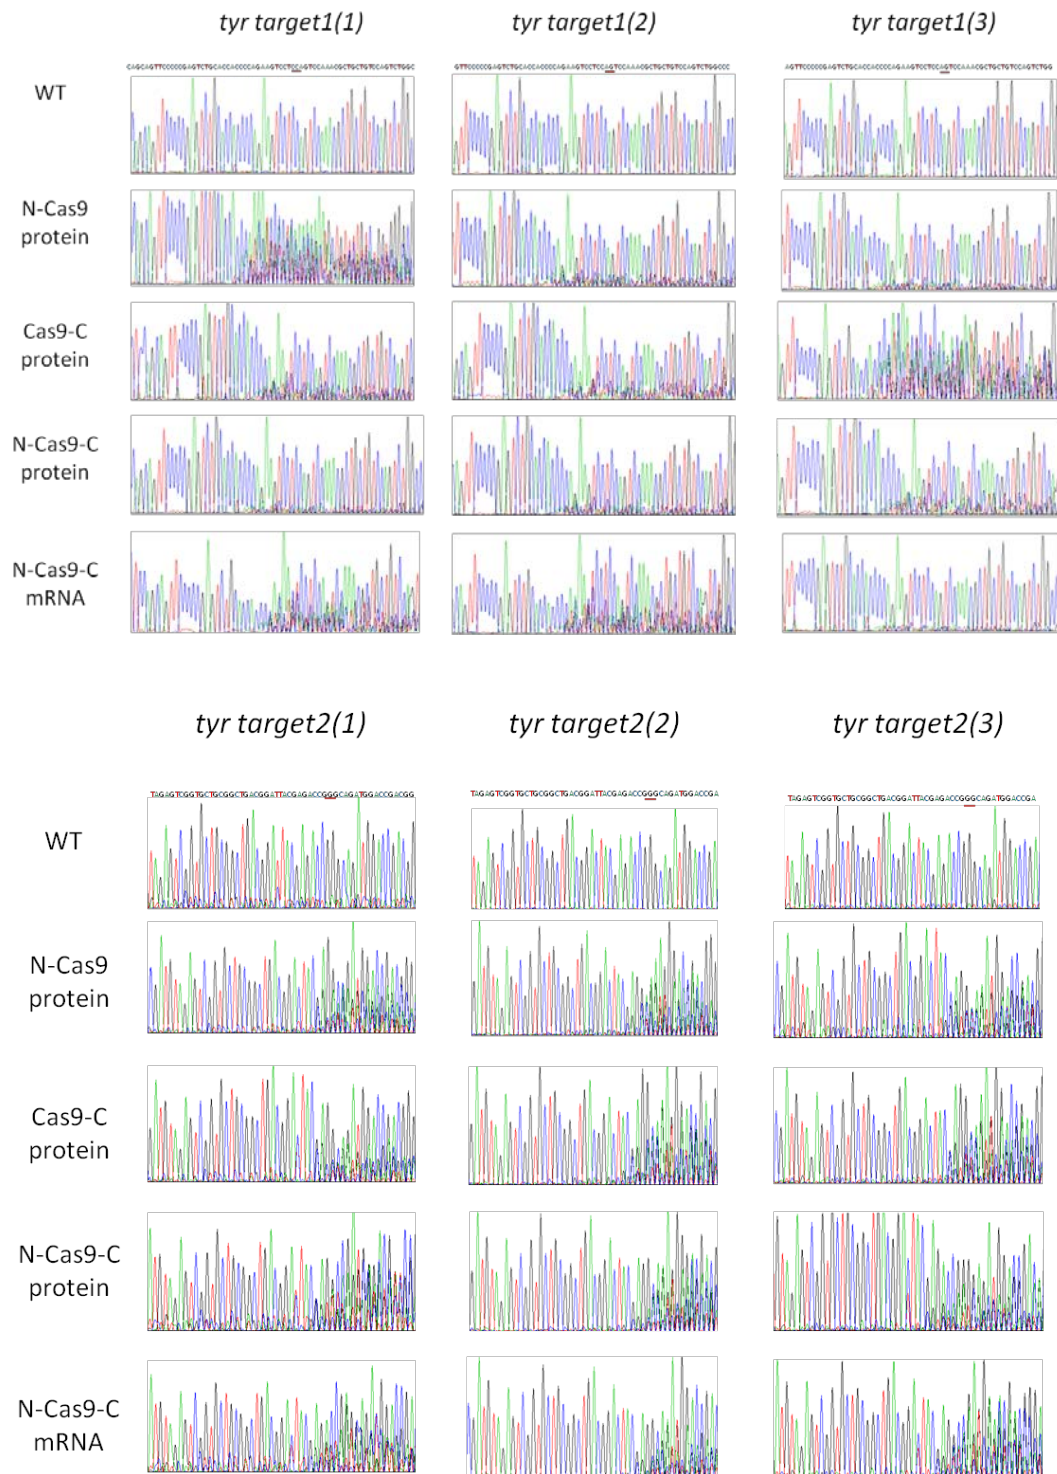

Figure S3 Multiplex Genome Mutation efficiency of the various NLS-fused Cas9 proteins and Cas9 mRNA for four loci of *tyr* and *gol* gene. T7E1 assays showed the rates of mutagenesis for *tyr* target 1 (A), *tyr* target2 (B), *gol* target1 (C) and *gol* target 2 (D).

Figure S4

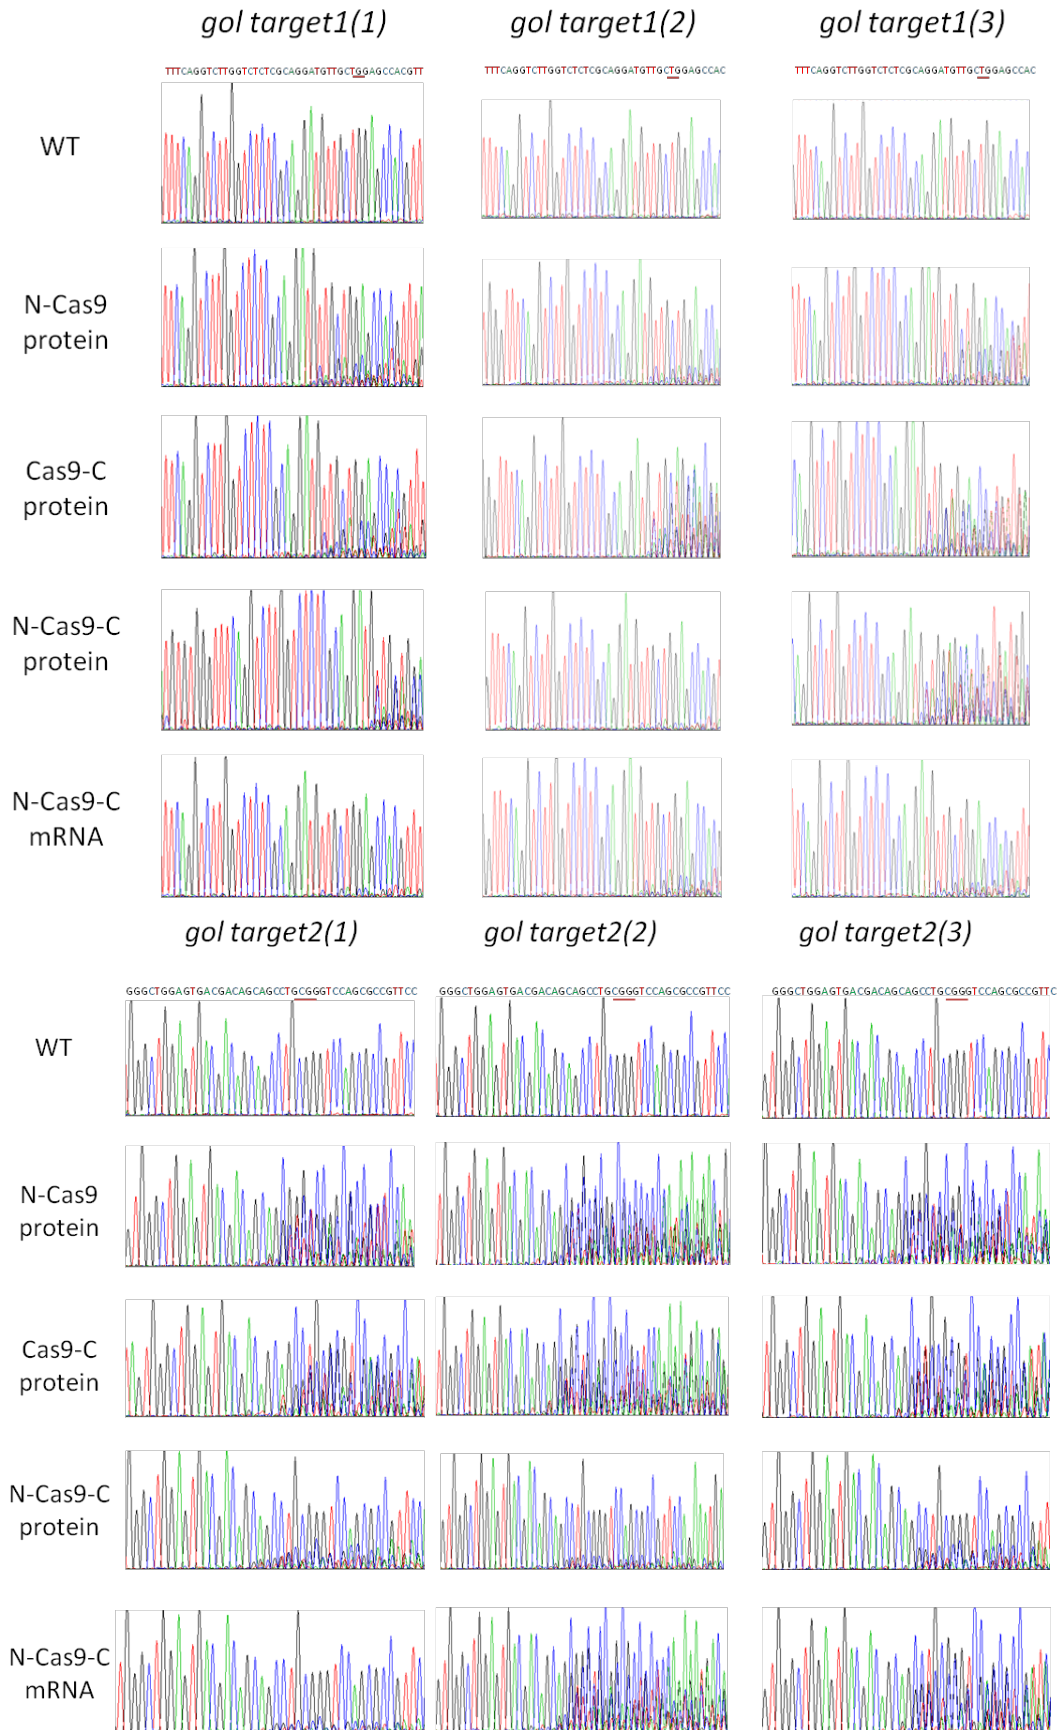

Figure S4 The PCR Sanger sequencing at two *loci* of *tyr* and two *loci* of *gol*.
