Self-reported ART medication use. Baseline denotes first ART visit post-seroconversion or baseline visit for HIV seroconverter and chronic HIV cohorts, respectively. Time-updated denotes first incident cardiovascular event after age 40, loss to follow-up, last visit in 2010, or age 60.

Abbreviations: ART, antiretroviral therapy, ddI, didanosine, d4T, Stavudine, ddC, Zalcitabine (dideoxycytidine), HIV, human immunodeficiency virus.

a - Fisher's Exact Test vs. control group.

Mixed effects model estimates with log2-transformed WBC and neutrophil count as the dependent variables for the merged HIV+ cohort with follow-up between ages 40-60. Models included a random intercept and slope for each subject. * indicates interaction. Mj+ denotes heavy marijuana users, Mj-, occasional or non-users, Sm+, moderate or heavy smokers (≥ 0.25 packs/day, average), Sm-, light or non-smokers.

Abbreviations: HIV, human immunodeficiency virus; Mj, marijuana; SE, standard error; Sm, smoking; WBC, white blood cells

a - Time-varying covariate, centered at age 40.

Data are n (%) unless otherwise specified at first incident cardiovascular event after age 40, loss to follow-up, last visit in 2010, or age 60.

Abbreviations: BMI, body mass index; HIV, human immunodeficiency virus; IQR, interquartile range; SD, standard deviation.

a - Chi-Squared, ANOVA, or Kruskal-Wallis Rank Sum Test, for categorical, normally-distributed continuous, and non-normally distributed continuous variables, respectively.

b - Highest use at \geq 2 visits: Heavy, > 14 drinks/week; Binge, 5 or more drinks/occasion at least monthly.

c - Average \geq 0.25 packs/day in 10 years prior to endpoint.

d - Mean total cholesterol at two most recent visits $>$ 240, or use of cholesterol-lowering medications for at least one year in the 10 years prior to endpoint.

e - Mean total HgA1c at two most recent visits \geq 6.5%, or use of diabetes medications for at least one year in the 10 years prior to endpoint.

f - Mean total systolic blood pressure $>$ 140 or diastolic blood pressure $>$ 90 at two most recent visits, or use of antihypertensive medications for at least one year in the 10 years prior to endpoint.

g - Reported use for one year or more in the 5 years prior to endpoint.

h - Adherence at visits once ART initiated.

Time-updated values from the merged HIV+ cohort at first incident cardiovascular event after age 40, loss to follow-up, last visit in 2010, or age 60. Models were fit using logistic regression.

Abbreviations: BMI, body mass index; CI, confidence interval; OR, odds ratio; SD, standard deviation.

a - Mean total cholesterol at two most recent visits > 240, or use of cholesterol-lowering medications for at least one year in the 10 years prior to endpoint.

b - Mean total HgA1c at two most recent visits \geq 6.5%, or use of diabetes medications for at least one year in the 10 years prior to endpoint.
