

Supplementary Table SV Age-adjusted and multivariable odds ratios of early menopause by BMI in 1989 excluding women who had menopause between ages 45–47, Nurses' Health Study II, 1989–2011^a.

Adiposity measure	Total	Cases	Age-adjusted model		Multivariable-adjusted model ^b	
			OR	95% CI	OR	95% CI
BMI, 1989 (kg/m ²)						
<18.5	2301	125	1.31	1.08, 1.58	1.32	1.09, 1.59
18.5–22.4	31 049	1299	ref		ref	
22.5–24.9	15 273	631	0.99	0.90, 1.09	0.95	0.86, 1.05
25.0–27.4	8426	298	0.85	0.75, 0.96	0.79	0.69, 0.90
27.5–29.9	3755	122	0.78	0.64, 0.94	0.71	0.59, 0.86
30.0–34.9	4447	172	0.93	0.79, 1.10	0.83	0.70, 0.98
≥35.0	2761	137	1.21	1.01, 1.45	1.03	0.85, 1.24

^an = 68 012.

^bAdjusted for age, race/ethnicity, physical activity, pack-years cigarette smoking, alcohol consumption, oral contraceptive use, parity, age at menarche and breastfeeding. See Table II footnote for categorization of covariates.
