

B

HLA-DR4+ Subjects (n=16)	
Gender [n (%)]	
Male	4 (25%)
Female	12 (75%)
Race [n (%)]	
White	15 (94%)
Other	1 (6%)
Ethnicity [n (%)]	
Hispanic	1 (6%)
Non-Hispanic	14 (88%)
Unknown	1 (6%)
Age [yrs, mean (SD)]	21.25 (3.7)

Supplementary Figure 1. Study Subjects and Enrollment. (A) Consort diagram showing identification of a subgroup of HLA-DR4+ subjects who tested seronegative for RV-A39 and completed a double-blind placebo-controlled trial of probiotic supplementation for common cold. (B) Characteristics of HLA-DR4+ subjects.
