

Supporting Information

Fig. S1 Genome-wide patterns of linkage disequilibrium (LD) across chromosomes in the A (up) and C subgenome (down) of *Brassica napus* measured with 33,186 SNPs.

Fig. S2 The average distance of LD decay in the A and C subgenomes of *B. napus*.

Fig. S3 Venny plot of overlapped genes among three data sets in rapeseed and *Arabidopsis*.

Table S1[#] List of rapeseed accessions used in this study.

Table S2 Genotype data for 327 accessions in this study (<http://pan.baidu.com/s/1kVFPfIP>).

Table S3 The distribution of SNPs across the 19 chromosomes of the rapeseed genome.

Table S4[#] Physical position of the weak and strong LDs

Table S5 Homeologous exchanges between the A and C subgenomes in regions for weak and strong LD.

Table S6 Sequence features of genome regions with weak and strong LD.

Table S7[#] Regions of selective sweep between the winter/spring and semi-winter groups in rapeseed.

Table S8[#] Genes within selective sweep regions between semi-winter and winter/spring groups in rapeseed.

Table S9[#] Functional categories of the genes in the regions of selective sweep between winter/spring and semi-winter groups in rapeseed.

Table S10[#] Regions of selective sweep between spring and winter groups in rapeseed.

Table S11[#] Genes within selective sweep regions between spring and winter groups in rapeseed.

Table S12[#] Functional categories of the genes in the region of selective sweep between spring and winter groups in rapeseed.

Table S13 QTLs were aligned to selective sweep within the segregation populations derived from hybrid between spring and winter rapeseed reported by Udall *et al.* (2006) and Quijada *et al.* (2006).

Table S14[#] A list of 4,304 genes from genome regions differentiating between winter and spring groups in rapeseed.

Table S15[#] A list of 4,247 differentially expressed genes between winter and spring groups in rapeseed as detected by Lu *et al.* (2014).

Table S16[#] A list of 5,500 differentially expressed genes between summer and winter ecotypes in *Arabidopsis thaliana* as detected by Des Marais *et al.* (2012).

Table S17[#] A list of 202 genes overlapping between the three data sets from rapeseed and *Arabidopsis*.

Table S18[#] The significant SNPs associated with flowering time across 4 years.

[#]available as a separate file.xlsx.

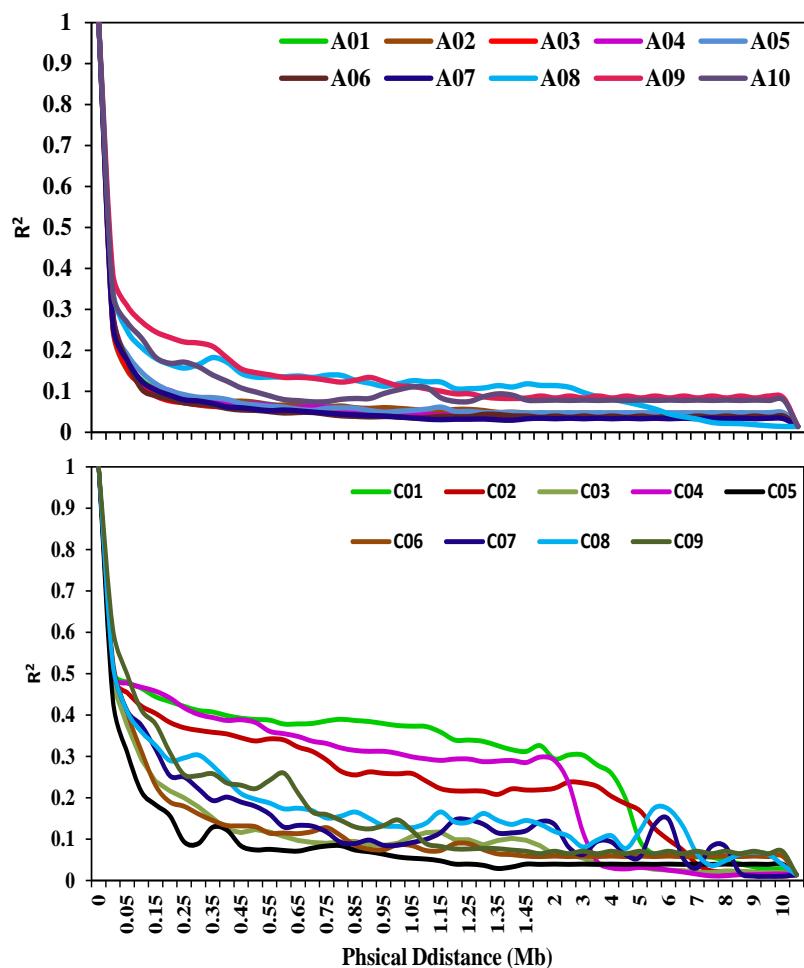

Fig. S1 Genome-wide patterns of linkage disequilibrium (LD) across chromosomes in the A (up) and C subgenome (down) of *Brassica napus*.

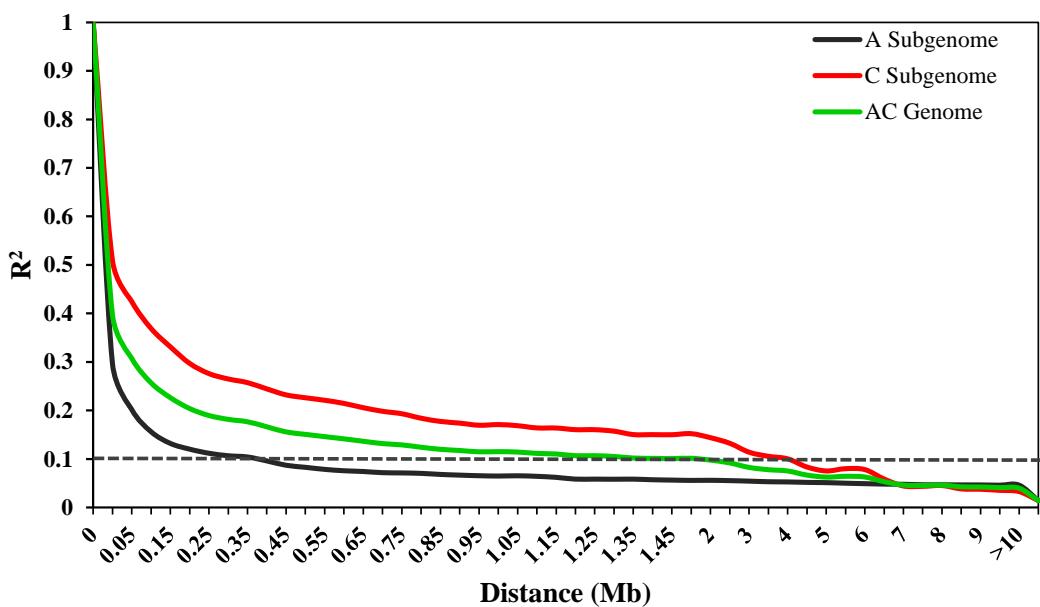

Fig. S2 The average distance of LD decay in the A and C subgenomes of *B. napus*.

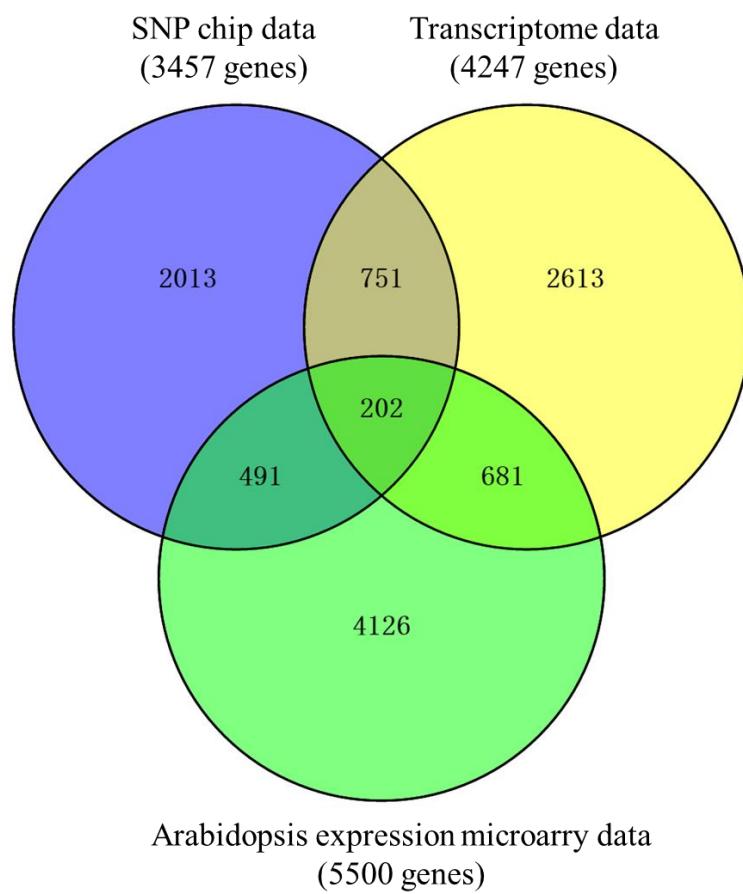

Fig. S3 Venny plot of overlapped genes among three data sets in rapeseed and *Arabidopsis*. SNP chip data including 3,457 *Arabidopsis* homologous genes (4,304 *B. napus* genes) from the top 5% Fst between winter and spring rapeseed. 4,247 DEGs (differentially expressed genes) from rapeseed detected by transcriptome sequencing and 5,500 DEGs from *Arabidopsis* detected by expression microarray analysis.

Table S3 The distribution of SNPs across the 19 chromosomes of the rapeseed genome

Chromosome	SNPs	Size (Mb)	SNPs/ 100kb	Genes/ 100kb	Average r ² value	LD decay (Mb) (r ² = 0.1)
A01	1700	23.24	7	15	0.082	0.15 - 0.20
A02	1493	24.79	6	14	0.100	0.10 - 0.15
A03	2416	29.73	8	18	0.072	0.10 - 0.15
A04	1689	19.14	9	14	0.086	0.20 - 0.25
A05	1838	23.02	8	15	0.096	0.20 - 0.25
A06	1783	24.39	7	15	0.079	0.10 - 0.15
A07	2160	24.01	9	15	0.079	0.15 - 0.20
A08	1373	18.93	7	15	0.150	1.15 - 1.20
A09	1745	33.86	5	15	0.151	1.15 - 1.20
A10	1796	17.38	10	16	0.122	0.45 - 0.50
C01	2511	38.77	6	10	0.396	4.50 - 5.00
C02	2353	46.19	5	10	0.280	5.50 - 6.00
C03	2828	60.56	5	12	0.138	0.60 - 0.65
C04	3254	48.89	7	11	0.313	3.00 - 3.50
C05	1116	43.09	3	11	0.110	0.20 - 0.25
C06	1466	37.19	4	11	0.138	0.80 - 0.85
C07	1882	44.77	4	11	0.144	2.00 - 2.50
C08	1697	38.39	4	12	0.173	4.00 - 4.50
C09	1141	48.5	2	10	0.162	1.05 - 1.10
A subgenome	17993	238.49	8	15	0.102	0.35 - 0.40
C subgenome	18248	406.35	4	11	0.206	3.50 - 4.00
Whole genome	36241	644.84	6	13	0.154	1.35 - 1.45

Table S5 Homeologous exchanges between the A and C subgenomes in regions for weak and strong LD

Subgenomes	No. of blocks	No. of homeologous blocks	Percentage of homeologous blocks
Weak LD regions			
A	705	267	37.90%
C	197	101	51.30%
Strong LD regions			
A	168	78	46.40%
C	445	205	46.10%

Table S6 Sequence features of genome regions with weak and strong LD

Features	weak LD regions			strong LD regions		
	A	C	AC	A	C	AC
No. of blocks	705	197	902	168	445	613
Block size(Mb)	3.15	0.76	3.91	0.43	1.63	2.06
Retroelements (%)	3.50	5.51	3.88	11.69	18.05	16.67
DNA Transposons (%)	1.06	2.27	1.29	2.02	2.79	2.63
GC content (%)	36.77	36.09	36.64	32.84	34.01	33.77
Gene density (No. of genes/Mb)	337	292	328	197	138	150

Table S13 QTLs were aligned to selective sweep within the segregation populations derived from hybrid between spring and winter rapeseed reported by Udall *et al.* (2006) and Quijada *et al.* (2006)
