

Supplemental Figure S3. TAT-BIND-S did not rescue *pre-45s rRNA* expression level in *EGFP_{CAG78}*-expressing HEK293 cells. Real-time PCR was performed to detect the expression level of *pre-45s rRNA*. Data were normalized to untransfected control and plotted as mean \pm S.E.M. Experiments were repeated at least three times. ** indicates $P < 0.01$. NS indicates no significant difference was observed.
