

Supplementary Figures

Supplementary Figure 1. Effects of TR1 and TR2 knock down on 2-DG treated

CaSki cells. (A & C) CaSki and SiHa cells were transfected with control and TR1, TR2

and TR1+TR2 siRNA and after 24h, treated with 20mM 2-DG, 48h and CFA was

performed. * $p < 0.01$ Control + DG vs TR1/TR2+DG, * $p < 0.01$ Control vs TR1/2 siRNA. (B

& D) CaSki and SiHa cells were transfected with scrambled and TR1 and TR2 siRNA

and protein levels were determined by Western blot.
