

An open label trial of folate receptor-targeted intraoperative molecular imaging to localize pulmonary squamous cell carcinomas

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Transparent Reporting of Evaluations with Nonrandomized Designs (TREND) Flow Diagram of Trial.

Supplementary Video 1: *In situ* fluorescence of SCC during FR-IMI with OTL38. Subject 3 presented with a 1.7cm left upper lobe nodule which displayed strong NIR signal during *in situ* fluorescent imaging.

See Supplementary Video 1

Supplementary Video 2: SCC displaying fluorescence upon *ex vivo* tumor bisection. Subject 1 presented with a 5.2cm right lower lobe nodule which displayed fluorescence only after tumor bisection.

See Supplementary Video 2
