

Figure S4.

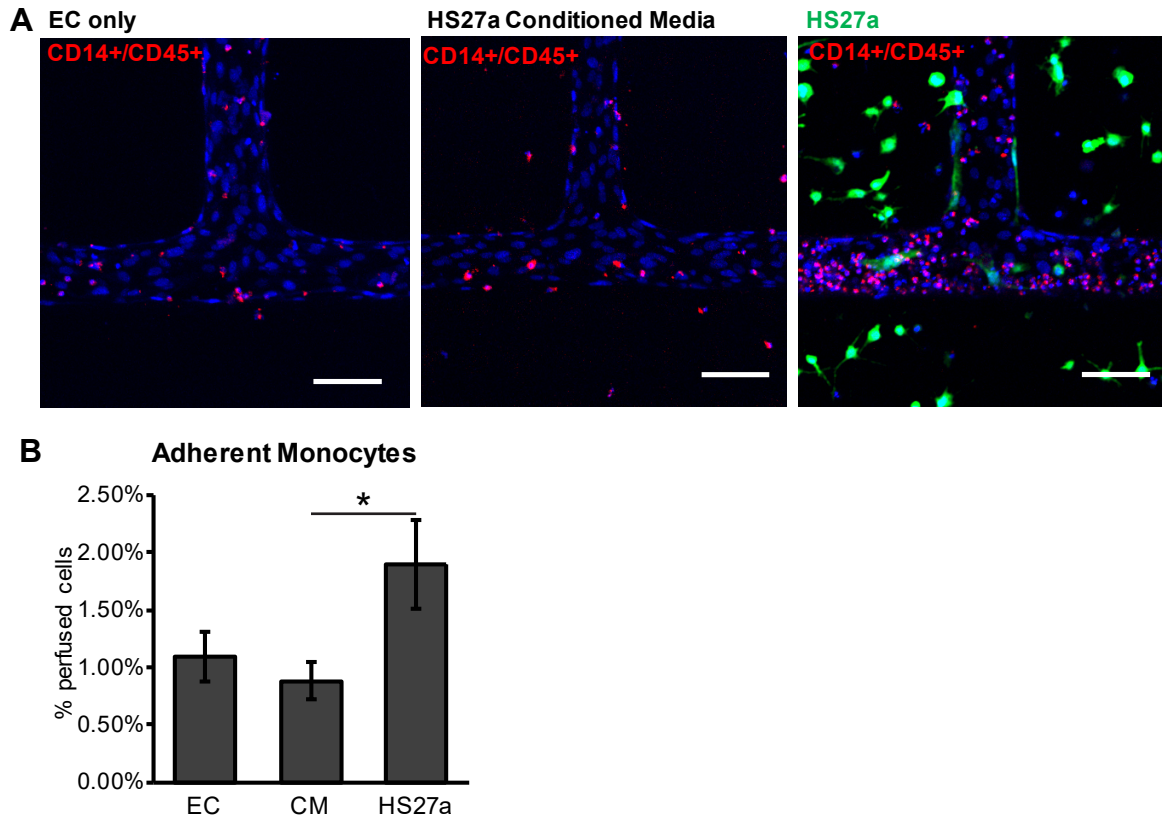

Figure S4. Monocyte adhesion in HS27a vessels. (A) Monocytes perfused through EC, EC with HS27a-conditioned media, or HS27a-co-cultured vessels. (B) Quantification of monocyte adhesion shows no changes in adhesion between EC only and EC with HS27a-conditioned media but an increase within the HS27a-co-cultured vessels. Scale bars = 100 μ m.
