aOR adjusted Odds Ratios; CI confidence intervals; SD standard deviation for age 8.75 years, for BMI 4.28 kg/m², for cholesterol 1.09 mmol/l, for uric acid 84.24 mmol/l, for CRP 1.06 log mg/l

& **Model A** shows age adjusted odds ratios with 95% confidence intervals. Italic marked associations revealed p-values below 0.10.

* **Model B** shows completely and mutually adjusted odds ratios with 95% confidence intervals. Not included in Model B were variables regarding BMI and hypercholesterolemia due to high overlap with other variables. Bold marked associations revealed p-values below 0.10.
