

Figure S3. Root hair length of 16-day-old seedlings.

Average root hair length of 10% longest root hairs ($n > 100$) of 16-day-old seedlings grown vertically on $\frac{1}{2}$ MS medium with or without 100 mM NaCl. Seedlings were transferred to such agar plates 5 days after germination from $\frac{1}{2}$ MS agar plates without (Mock) or with SA187. Only root hairs that emerged after the seedling transfer were measured. Error bars represent SD. Asterisks indicate a statistical difference based on the Student's t-test (***) $P < 0.001$.
