

### **Supplementary Dataset 3:**

This dataset contains the viral hormone sequences which did not give any significant hits to any predicted protein in known viral genomes (threshold E-value  $\leq 0.05$  using tBlastn). The viral genome database (ref\_viruses\_rep\_genomes.tar.gz,ftp://ftp.ncbi.nlm.nih.gov/blast/db/) was downloaded from NCBI and searched for the hormone peptide sequences reported in **Extended Dataset 1**. The name of the human protein is reported at the top of every new hit. **PART A** reports the results obtained using the whole sequences of the proteins for the database search. **PART B** (p. 20) reports processed sequences of the hormones collected from Uniprot database. The processed sequences are obtained from Uniprot and reported at the second part of the document with Uniprot naming ( e.g: >sp|O00253|21-82), the second part of the name (O00253) is the code of the protein at Uniprot database and can be used for Uniprot search. The third part (21-82) shows the peptides position within the precursor sequence. The names of the pro-opiomelanocortin and glucagon-related hormones are also reported at the title.

#### **1. Human Glucagon**
