

**Figure S1.** Cytotoxicity of iNOS and endocytosis inhibitors. RAW 264.7 cells were treated with 1  $\mu$ M 1400W, 0.5 mM MBCD or 50  $\mu$ M MDC alone for 8 h at 37° C without In<sub>2</sub>O<sub>3</sub>. Cell viability was evaluated by trypan blue exclusion assay. The data were expressed as means  $\pm$  SD of 7–8 independent experiments.
