Supplementary Table 1: Concentrations (in pmol/mg protein) of ceramides (Cer), glycolipids, lysophosphatidylcholines (LPC), phosphatidylcholines (PC), lysophosphatidylethanolamines (LPE), and phosphatidylethanolamines (PE) in Aac2 and ArANT expressing yeast cells, Percoll-purified mitochondria and mitoplasts. N.D.: not determined. B.Q.L.: below quantitative limit. O-(carbon:double bond) indicates a plasmalogen species. Results shown are Mean +/- S.E.M.

Supplementary Table 2: Concentrations (in pmol/mg protein) of cholesteryl esters (CE), diacylglycerols (DAG), and triacylglycerols (TAG) in Aac2 and ArANT expressing yeast cells, Percoll-purified mitochondria and mitoplasts. For TAG determination, all the fragments that would comprise the acyl chains were summed up and isomeric composition for the molecular species as the brutto nomenclature (carbon:double bond) is given. CE concentrations are compared to the internal standard TAG_17:1-17:1-17:1. N.D.: not determined. B.Q.L.: below quantitative limit. Results shown are Mean +/- S.E.M.

Supplementary Table 3: Concentrations (in pmol/mg protein) of lysophosphatidic acids (LPA), phosphatidic acids (PA), lysophosphatidylglycerols (LPG), phosphatidylglycerols (PG), lysophosphatidylinositols (LPI), phosphatidylinositols (PI), lysophosphatidylserines (LPS), and phosphatidylserine (PS) in Aac2 and ArANT expressing yeast cells, Percoll-purified mitochondria and mitoplasts. N.D.: not determined. B.Q.L.: below quantitative limit. p(carbon:double bond) indicates a plasmalogen species. . a(carbon:double bond) indicates an alkylényl species. Results shown are Mean +/- S.E.M.

Supplementary Table 4: Concentrations (in pmol/mg protein) of cardiolipins (CL), and monolysocardiolipins (MLCL) in Aac2 and ArANT expressing yeast cells, Percoll-purified mitochondria and mitoplasts. N.D.: not determined. B.Q.L.: below quantitative limit. For CL determination, all the fragments that would comprise the acyl chains were summed up and isomeric composition for the molecular species as the brutto nomenclature (carbon:double bond) is given. Results shown are Mean +/- S.E.M.

[M-2H] ²⁻	Species	Aac2						Artemia-ANT

Supplementary Figure 1

Legend to Supplementary figure 1: Time-lapse of in-gel pseudo-complex I (top series) and complex II (bottom series) activities. Solubilized mitochondrial complexes (400 µg) were separated by clear-native polyacrylamide gel electrophoresis (CN-PAGE). Gels were incubated with appropriate reagents (see Materials and Methods) to visualize the activities of NADH dehydrogenases Nde1, Nde2 and Ndi1 (collectively referred to as pseudo-complex I) or succinate dehydrogenase (CII). Activity products were imaged using a standard flatbed scanner. The gel-lane scan on the top-most left corner is a molecular weight ladder (NativeMark™ Unstained Protein Standard, ThermoFisher Sci, imaged at a different contrast and saturation level), to which all gel scans shown in the series can be compared to (MW marker image of both top and bottom series is the same, as these were performed sequentially). In left lane, mitochondria expressing ArANT were loaded, and in the right lane those obtained from Aac2. Incubation times are indicated in the bottom of each panel.
