Supplemental Fig 2. Expression of **A**) Rab5A, **B**) Rab5B, and **C**) Rab5C after treatment with scrambled control and the indicated specific siRNAs and analyzed by qPCR to verify that the siRNA knockdown technology was effective. The shaded bars are as follows: Black is untreated, light gray is scrambled siRNA, and dark gray is anti-Rab siRNA. Bars represent normalized *Malat-1* expression mean±standard deviation, n=3. Values were calculated using Student's t test.
