

Supplemental Figure 6. LPA-stimulated HIF1 α is an early response. SKOV3-ip cells were stimulated with LPA (10 μ M) and collected at the indicated time points. Cells were lysed and the lysates were subjected to immunoblot analysis using HIF1 α -antibodies. The blot was stripped and re-probed with GAPDH to monitor the equal loading of protein lysates. Results from a typical experiment (n = 3) is presented.
