S1 File. **Effect of session time on visual search time.** Line diagram showing the mean (n = 33) visual search times (sec), for both serial (circles) and pop-out (squares) search tasks. Results are shown for each distractor condition, for session times T1 (6 am to 12 noon, black symbols), T2 (12 noon to 6 pm, gray symbols) and T3 (6 pm to 6 am the following day, open symbols). Error bars show ± one standard error of the mean. Note that for some conditions, the error bars are not visible because one standard error was less than or equal to the symbol size.
