

**S2 Table. Monoterpenoids detected in the headspace of four C11-terpene production strains (11-p, 11-m, 11-g, 11-c) and one control strain without GPP-MTase and TS (10-0)**

| #  | Compound <sup>b</sup>  | Detected in culture of strain |      |      |      |      | Identified by <sup>a</sup> | RI   |
|----|------------------------|-------------------------------|------|------|------|------|----------------------------|------|
|    |                        | 11-p                          | 11-c | 11-g | 11-m | 10-0 |                            |      |
| 1  | cyclofenchene          | x                             |      |      |      |      | SI, RI                     | 882  |
| 2  | 2-bornene              | x                             |      |      |      |      | SI, RI                     | 906  |
| 3  | tricyclene             | x                             |      |      |      |      | SI, RI                     | 923  |
| 4  | $\alpha$ -thujene      | x                             |      |      |      |      | SI, RI                     | 928  |
| 5  | $\alpha$ -pinene       | x                             |      |      | x    |      | Ref                        | 934  |
| 6  | monoterpene            | x                             |      |      |      |      |                            | 940  |
| 7  | camphene               | x                             |      | x    |      |      | SI, RI                     | 950  |
| 9  | sabinene               | x                             |      |      | x    |      | SI, RI                     | 974  |
| 10 | $\beta$ -pinene        | x                             |      |      | x    |      | Ref                        | 977  |
| 13 | $\beta$ -myrcene       | x                             | x    | x    | x    | x    | Ref                        | 991  |
| 14 | $\alpha$ -phellandrene | x                             | x    |      |      | x    | Ref                        | 1009 |
| 16 | limonene               | x                             | x    | x    | x    | x    | Ref                        | 1031 |
| 18 | (Z)- $\beta$ -ocimene  | x                             | x    |      |      | x    | Ref                        | 1038 |
| 21 | (E)- $\beta$ -ocimene  | x                             | x    |      |      | x    | SI, RI                     | 1049 |
| 23 | $\gamma$ -terpinene    | x                             | x    |      |      |      | Ref                        | 1060 |
| 29 | linalool               |                               | x    | x    |      | x    | Ref                        | 1099 |
| 34 | alloocimene            |                               |      |      |      | x    | Ref                        | 1129 |
| 38 | isopulegol             |                               | x    |      |      | x    | Ref                        | 1149 |
| 39 | citronellal            | x                             | x    | x    |      | x    | Ref                        | 1151 |
| 40 | isoneral               |                               | x    |      |      | x    | SI, RI                     | 1162 |
| 42 | borneol                | x                             |      |      |      |      | SI, RI                     | 1170 |
| 43 | terpinen-4-ol          | x                             |      |      |      |      | Ref                        | 1180 |
| 44 | isogeranial            |                               | x    |      |      | x    | SI, RI                     | 1180 |
| 52 | $\gamma$ -isogeraniol  | x                             | x    |      |      |      | SI, RI                     | 1218 |
| 53 | $\beta$ -citronellol   | x                             | x    | x    | x    | x    | Ref                        | 1227 |
| 54 | (Z)-isogeraniol        | x                             | x    |      |      | x    | SI, RI                     | 1232 |
| 56 | neral                  | x                             | x    | x    |      | x    | Ref                        | 1241 |
| 57 | geraniol               | x                             | x    | x    |      | x    | Ref                        | 1254 |
| 58 | geranal                | x                             | x    | x    |      | x    | Ref                        | 1270 |

<sup>a</sup> Compounds were identified via comparison of mass spectra and RIs of reference compounds (Ref) or mass spectra of the NIST mass spectral library (v14) and RIs (SI, RI) published by Adams (29).

<sup>b</sup> Compounds with unknown structures were named regarding their highest *m/z* value as monoterpene (*m/z* = 136) or monoterpene alcohol (*m/z* = 154).
