

ALCAM shedding at the invasive front of the tumor is a marker of myometrial infiltration and promotes invasion in endometrioid endometrial cancer

SUPPLEMENTARY MATERIALS

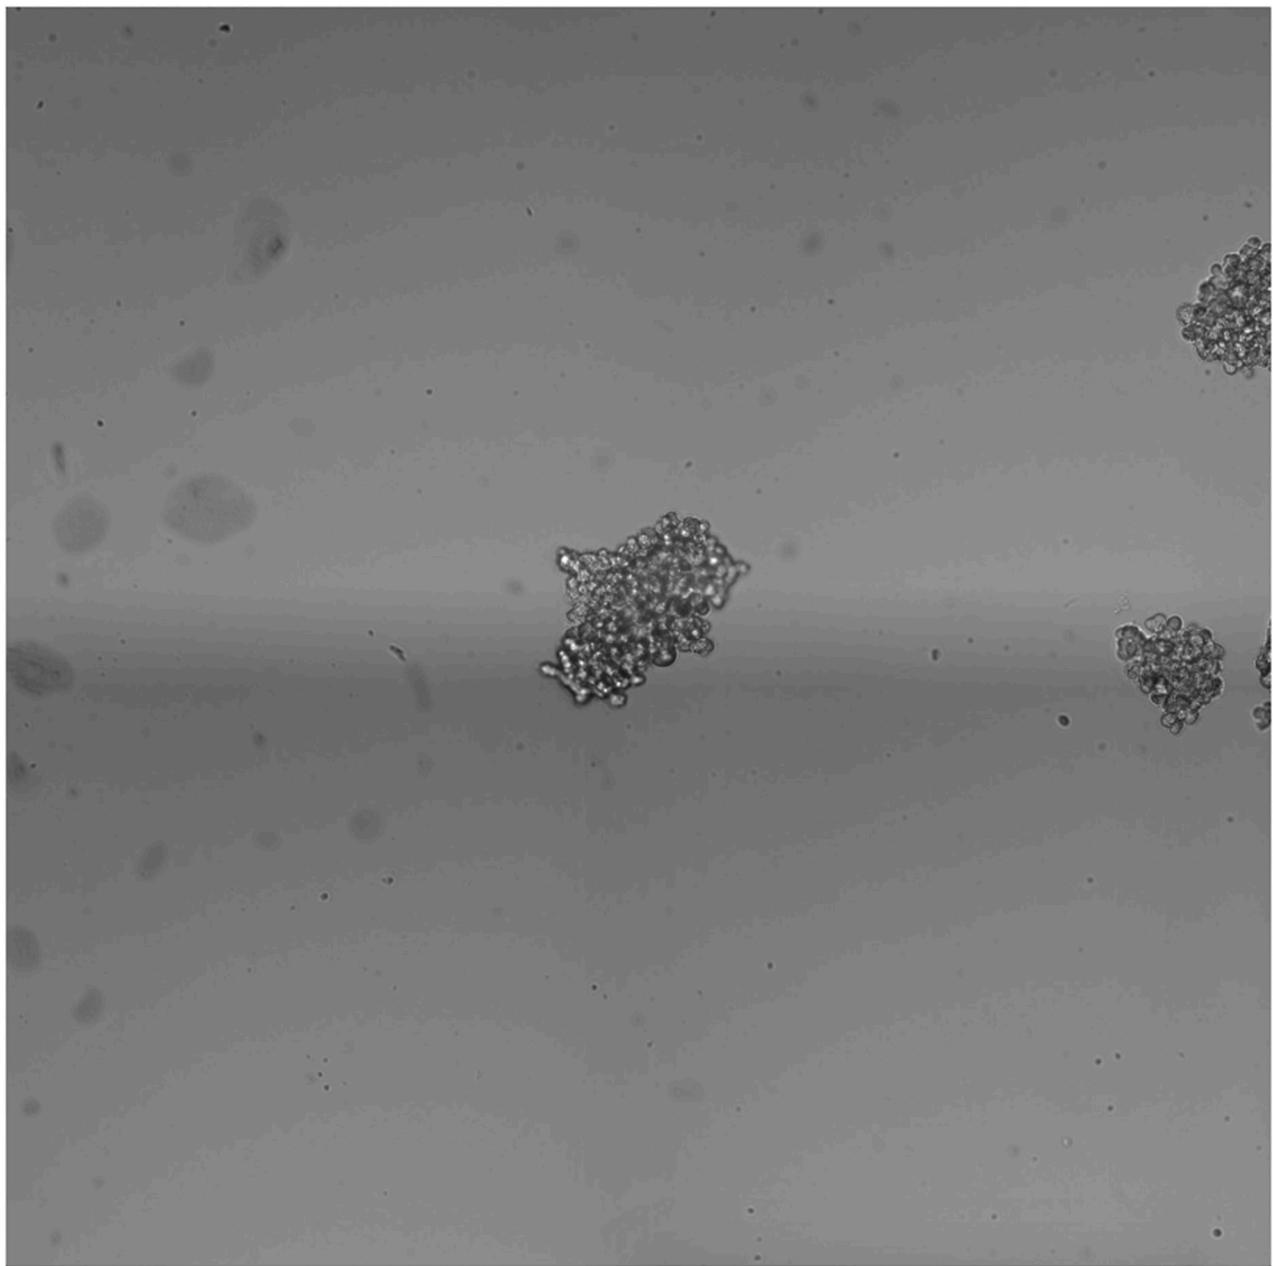

Supplementary Figure 1: Hec1A and Hec1A-ETV5 orthotopic murine model. (A) IVIS images of the injected mice evidenced a larger tumor growth in the ETV5-overexpressing cells. (B) Quantification of the luminescence of the primary tumors ex vivo evidenced a higher intensity in the ETV5-overexpressing mice ($p=0.064$). (C) Upper: Images of ALCAM expression in Hec1A control mice, presenting less invasion and scattered clusters of cells. Down: Images of ALCAM in Hec1A-ETV5 mice, with higher rate of invasion and disseminated cells, with a finger-strand pattern. ALCAM staining was more homogeneous in the control model with lower invasion and more collective invasion.

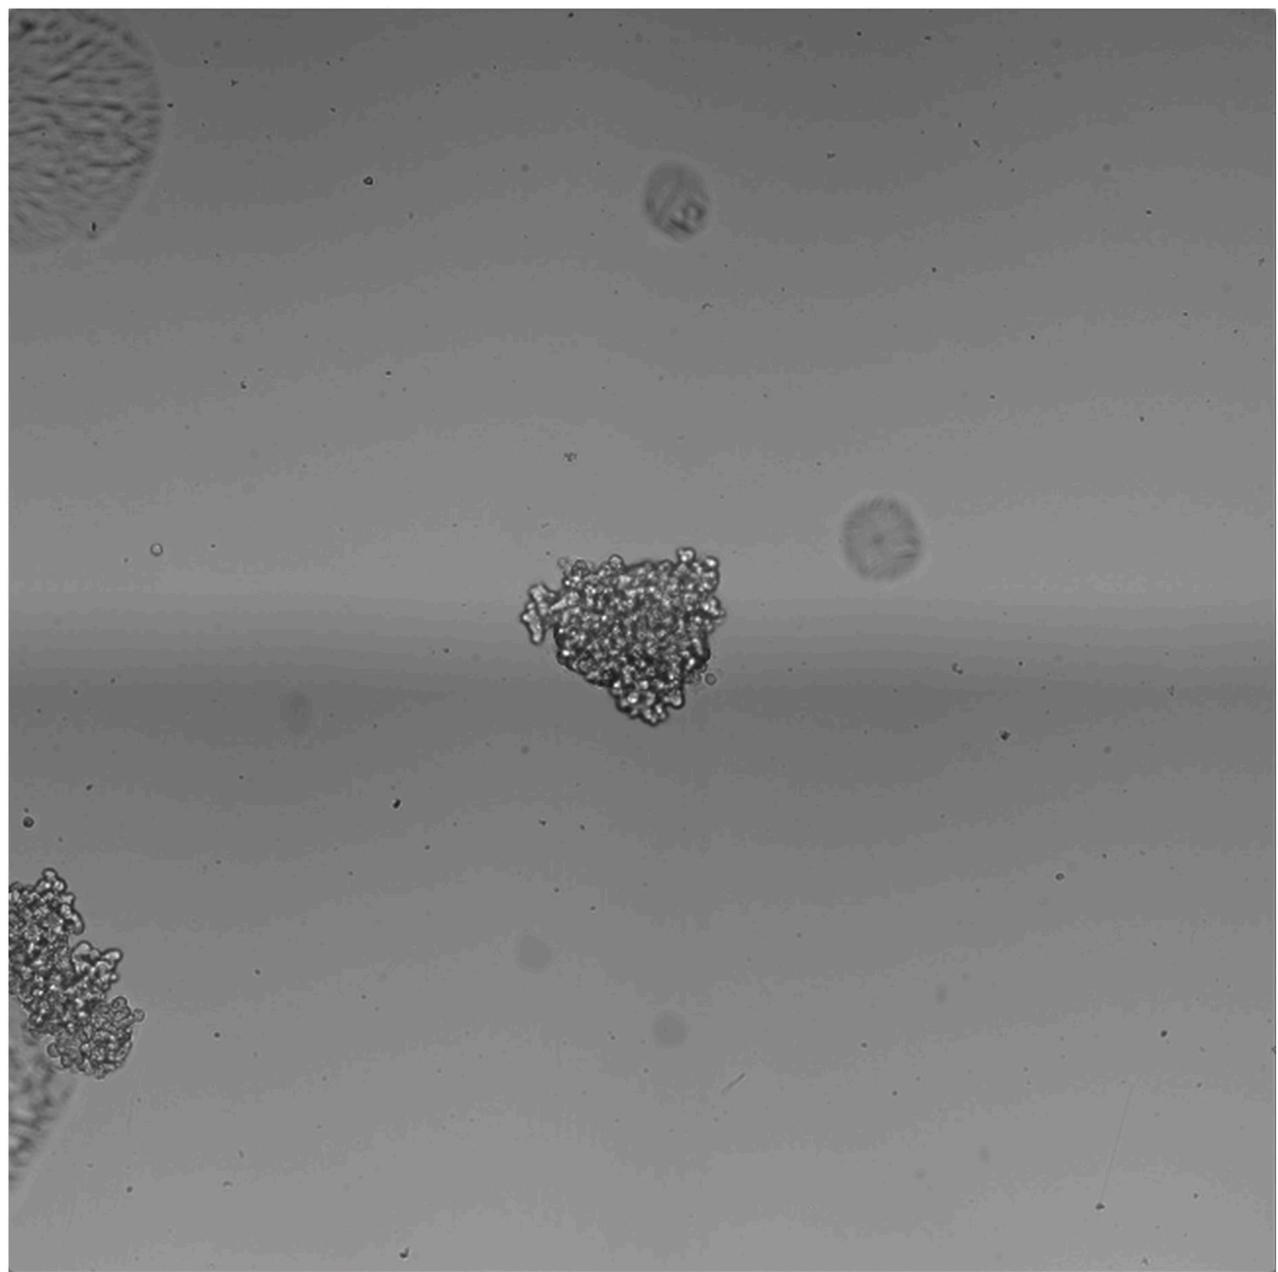

Supplementary Video 1: Hec1A-ETV5 ALCAMcytoless-Cherry spreading aggregate on fibronectin-coated striped followed for 36 h.

See Supplementary Video 1

Supplementary Video 2: Hec1A-ETV5 ALCAM-Cherry spreading aggregate on fibronectin-coated striped followed for 36 h.

See Supplementary Video 2

Supplementary Video 3: Hec1A-ETV5 NCherry spreading aggregate on fibronectin-coated stripes followed for 36 h.

See Supplementary Video 3

Supplementary Table 1: Patterns of ALCAM in the tumor: univariate linear regression
