

THE LANCET

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Protopopoff N, Mosha J F, Lukole E, et al. Effectiveness of a long-lasting piperonyl butoxide-treated insecticidal net and indoor residual spray interventions, separately and together, against malaria transmitted by pyrethroid-resistant mosquitoes: a cluster, randomised controlled, two-by-two factorial design trial. *Lancet* 2018; published online April 11. [http://dx.doi.org/10.1016/S0140-6736\(18\)30427-6](http://dx.doi.org/10.1016/S0140-6736(18)30427-6).

1 Methods

1.1 Study area

We provide the map of the study area representing each cluster with their core and buffer areas and the intervention allocated.

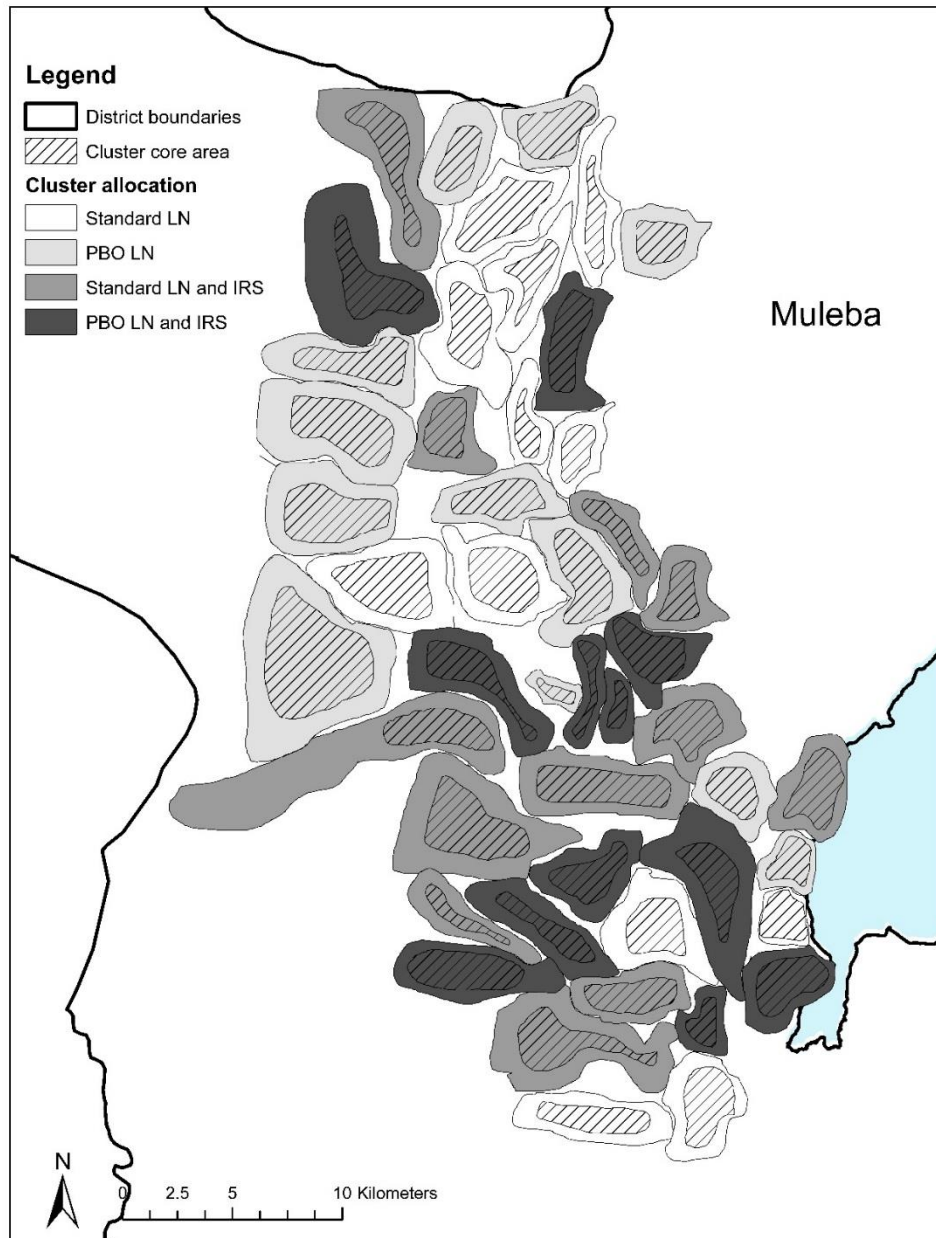

Figure S 1: Map of the study area representing each cluster with their core and buffer areas and the intervention allocated.

1.2 Per-protocol and other analyses

Per-protocol (PP) analysis included only those children who received and used the intended treatment and was restricted to the first-year surveys as it was difficult for householders to recall in the second year whether their house had been sprayed two years earlier. A secondary analysis examined the effect of each intervention arm (1. PBO LLIN alone, 2. Combination standard LLIN & IRS and 3. Combination PBO LLIN & IRS) compared to the reference arm (standard LLIN alone) on entomological inoculation rate, vector density, and sporozoite rate.

2 Results

2.1 Coverage of IRS and LLIN per arms and per survey

Table S 1: Coverage of the interventions by arm.

	Standard LLIN arm	PBO LLIN arm	Standard LLIN & IRS arm	PBO LLIN & IRS arm
Proportion of houses receiving IRS	0.5 (0.1 - 2.0), 2/443	4 (0.5 - 29), 19/425	94 (92 - 96), 408/433	94 (87 - 97), 419/445
Proportion of household owning at least one LLIN (any LLIN*)				
2015 Survey A, 4 months post intervention	97 (88 - 99), 427/442	98 (97 - 99), 419/426	98 (96 - 99), 416/425	97 (93 - 99), 428/439
2015 Survey B, 9 months	97 (93 - 99), 414/425	98 (97 - 99), 398/405	98 (96 - 99), 420/428	98 (95 - 99), 403/412
2016 Survey C, 16 months	96 (94 - 98), 452/470	95 (92 - 96), 449/475	94 (91 - 96), 446/474	93 (90 - 95), 408/439
2016 SurveyD, 21 months	94 (90 - 96), 437/467	92 (87 - 95), 422/460	93 (86 - 97), 418/449	90 (85 - 93), 416/463
Propotion of households with adequate LLIN (any LLIN*) per sleeping place (access)				
2015 Survey A, 4 months	88 (83 - 93), 389/440	91 (87 - 94), 387/426	91 (86 - 94), 385/425	89 (82 - 93), 389/439
2015 Survey B, 9 months	91 (88 - 93), 386/424	88 (83 - 92), 358/405	91 (88 - 94), 390/427	87 (82 - 91), 359/411
2016 Survey C, 16 months	80 (75 - 84), 375/470	70 (65 - 74), 332/474	76 (72 - 80), 362/474	71 (63 - 77), 311/439
2016 SurveyD, 21 months	72 (67 - 76), 337/467	69 (62 - 75), 318/460	72 (64 - 79), 323/449	68 (60 - 74), 313/463
Proportion of resident declaring to use a LLIN (any LLIN*) the previous night				
2015 Survey A, 4 months	75 (66 - 82), 1915/2567	78 (73 - 82), 1997/2559	76 (67 - 83), 1893/2493	79 (72 - 85), 2002/2533
2015 Survey B, 9 months	80 (75 - 85), 2012/2510	78 (73 - 82), 1820/2335	76 (70 - 80), 1761/2333	77 (70 - 83), 1941/2522
2016 Survey C, 16 months	68 (59 - 76), 1818/2669	58 (51 - 65), 1571/2687	61 (56 - 67), 1629/2652	62 (55 - 69), 1580/2546
2016 SurveyD, 21 months	62 (57 - 67), 1610/2595	54 (47 - 62), 1445/2647	53 (43 - 63), 1368/2570	54 (46 - 62), 1482/2739
Proportion of study LLIN (study LLIN/any LLIN*)				
2015 Survey A, 4 months	92 (89 - 94), 1219/1329	93 (89 - 95), 1241/1337	95 (91 - 97), 1175/1241	94 (91 - 96), 1214/1291
2015 Survey B, 9 months	95 (92 - 97), 1144/1199	94 (91 - 96), 1043/1110	93 (90 - 95), 1042/1122	93 (89 - 96), 1132/1216
2016 Survey C, 16 months	92 (89 - 94), 1034/1126	91 (86 - 94), 981/1081	90 (85 - 94), 1018/1131	90 (84 - 94), 913/1013
2016 SurveyD, 21 months	82 (77 - 85), 844/1025	77 (71 - 82), 785/1021	79 (73 - 83), 789/1004	69 (61 - 76), 771/1122

* Any LN include study LLIN and other LLIN

Results are expressed in proportion with (95%CI) and absolute number n/N. N is total household number for IRS, LLIN ownership and LLIN access and total number of resident for usage.

2.2 Per-Protocol analysis result

Table S 2: Per-protocol analysis Plasmodium infection prevalence and anaemia by intervention (PBO LLIN vs No PBO LLIN and IRS vs No IRS), 4 and 9 months post intervention.

	Plasmodium infection prevalence					Anaemia prevalence under 5				
	n/N	%	OR	95%CI	P-value	n/N	%	OR	95%CI	P-value
Survey A, 2015, 4 months post intervention

Interaction coefficient			3.03	1.46-6.29	0.0037			10.12	0.74-137.92	0.0811

Per-protocol analysis restricted to individuals receiving and using the allocated interventions in each arm in year 2015. Data presented are n/N (%) and 95%CI. OR compared the two-main intervention effect 1/PBO LLIN vs No PBO LLIN and 2/IRS vs no IRS and their interaction. OR unadjusted for baseline plasmodium infection prevalence or anaemia prevalence. Plasmodium infection prevalence is reported for children 6 months to 14 years and prevalence of moderate to severe anaemia in children under 5 years old with haemoglobin level <8g/dl.

¹Standard LLIN and standard LLIN & IRS arms, ² PBO LLIN and PBO LLIN & IRS arms, ³ standard LLIN and PBO LLIN arms, ⁴ standard LLIN & IRS and PBO LLIN & IRS arms.

2.3 Comparison of each individual intervention arms with control arm (standard LLIN)

Table S 3: Mean vector density per night per household, sporozoite rate, and entomological inoculation rate per month per household by study arms during the first year and second year post intervention.

	<u>Vector density per night per household</u>					<u>Sporozoite rate</u>					<u>EIR per month per household</u>

*Mean and DR accounting for sampling weight

2.4 Forest plot: Factorial analysis comparing PBO LLIN vs no PBO LLIN and IRS vs no IRS on malaria infection prevalence

Figure S 2: Forest plot for the factorial analysis including the protective efficacy (PE=1-malaria prevalence ratio) between intervention arms and reference arms), the OR and 95%CI, 4, 9, 16 and 21 months post intervention.

The prevalence ratios of 0.72 (28% reduction) and a baseline prevalence of 20% in the reference arm as pre- specified in the sample size calculation, translates to odds ratio of 0.673. This OR is represented by the vertical black line.

2.5 Forest plot: Individual arm analysis comparing each intervention arms with standard LLIN on malaria infection prevalence

Figure S 3: Forest plot for the comparison of each intervention to the control arm (standard LLIN) including the protective efficacy (PE), the OR and 95%CI, 4, 9, 16 and 21 months post intervention.

The prevalence ratios of 0.60 (40% reduction) with a baseline prevalence of 20% in the reference arm as pre-specified in the sample size calculation, translates to odds ratio of 0.545. This OR is represented by the vertical black line.
