

Expression of HNF4G and its potential functions in lung cancer

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: A549 cells were infected with control virus (Vector) or HNF4G virus. HNF4G mRNA expression was determined in the presence of either DMSO or AKT inhibitor (MK-2206, 2 μ M). *** P < 0.001 versus Vector+DMSO; ### P < 0.001 versus HNF4G+DMSO; +++ P < 0.001 versus Vector+MK-2206.
