Contents

Online Resource 1. Study survey/questionnaire

Online Resource 2. Characteristics of enrolling sites

Online Resource 3. Proportions of patients with specific signs and symptoms of anemia, and signs and symptoms of anemia affecting the decision to prescribe a PRBC transfusion

Online Resource 4. Primary clinical considerations for prescribing a PRBC transfusion stratified by sex and age

Online Resource 5. Primary clinical considerations for prescribing a PRBC transfusion stratified by primary tumor type

Online Resource 6. Primary clinical considerations for prescribing a PRBC transfusion stratified by chemotherapy type and line

Online Resource 7. Primary clinical considerations for prescribing a PRBC transfusion stratified by site type

Online Resource 1. Study survey/questionnaire

Appendix C. Sample CRF

Site Attributes: ESA Use: Yes No Academic Non-academic

Subject age: years Subject sex: Male Female DD/ MM/YY
Date of diagnosis for cancer

Primary solid tumor type: Anal cancer Melanoma skin cancer
 Bladder cancer Non-melanoma skin cancer
Stage of primary solid tumor: Bone/sarcoma Ovarian cancer
 Stage IV (non-curative) Brain cancer Pancreatic cancer
 Stage IV (curative) Breast cancer Prostate cancer
 Cervical cancer Rectal cancer
 Colon cancer Renal cancer
 Esophageal cancer Stomach cancer
*If SCLC, specify: Head & neck cancer Testicular cancer
 Extensive Intestine cancer Thyroid cancer
 Limited Liver cancer Uterine cancer
 Unknown Small cell lung cancer* Other: _____
 Non-small cell lung cancer

Chemotherapy Treatment: DD/ MM/YY
Date of last cycle chemotherapy
 Platinum Non-platinum

If a standard regimen was given, which of the following regimens was used?

- Cyclophosphamide + Doxorubicin
- Cyclophosphamide + Epirubicin
- Cyclophosphamide + Docetaxel+ Doxorubicin
- Cyclophosphamide + Docetaxel+ Trastuzumab
- Cyclophosphamide + 5-Fluorouracil + Doxorubicin
- Cyclophosphamide + 5-Fluorouracil + Epirubicin
- Cyclophosphamide + 5-Fluorouracil + Methotrexate
- Docetaxel + Doxorubicin
- Docetaxel + Gemcitabine
- Dose dense Doxorubicin + Cyclophosphamide + Docetaxel

If a standard regimen was **not** given, which of the following agents was given to the subject?
(Check all that apply)

- S-FU
- Bevacizumab
- Capecitabine
- Cyclophosphamide
- Docetaxel
- Doxorubicin
- Epirubicin
- Gemcitabine
- Lapatinib
- Methotrexate
- Paclitaxel
- Trastuzumab
- Vinorelbine
- Other if Other, specify _____

Anemia relevant co-morbidities?

Yes None

- Congestive heart failure or coronary heart disease
- Chronic pulmonary disease
- Cerebral vascular disease

Last hemoglobin value prior transfusion:

g/dL

Date of hemoglobin draw

Where there any signs/symptoms related to anemia?

Yes No → asymptomatic

- Sustained tachycardia _____
- Tachypnea _____
- Chest pain/pectoral angina _____
- Postural hypotension _____
- Dyspnea on exertion _____
- Lightheadedness _____
- Syncope _____
- Fatigue _____
- Pallor _____

If there are multiple symptoms, please mark the most important sign or symptom with an X

Please order from 1 to 3 with 1 being the most important trigger and 3 being least important trigger for RBC transfusion

- Low hemoglobin
- Medical history
- Anemia symptoms

PRBC Transfusion:

Date of transfusion

units

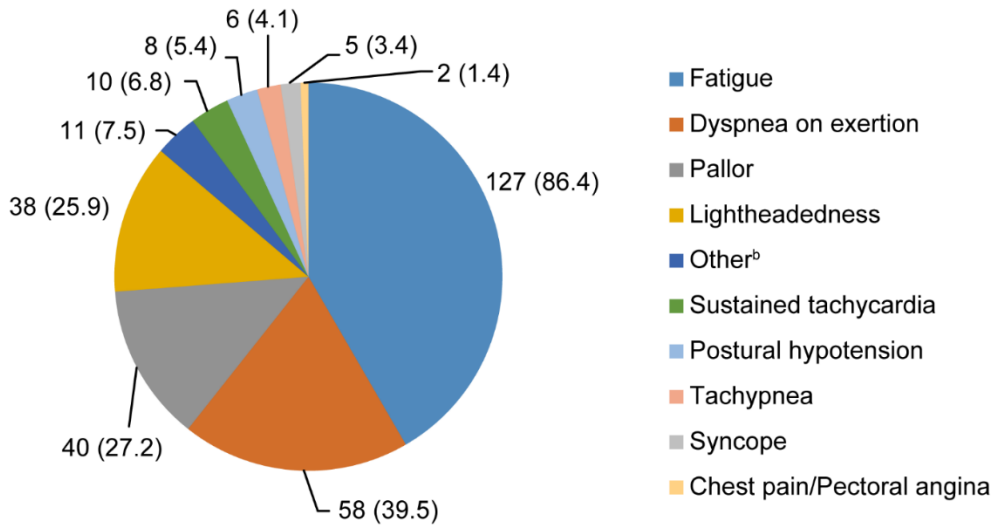

5-FU = 5-fluorouracil; CRF = case report form; ESA = erythropoiesis-stimulating agent; PRBC = packed red blood cell; RBC = red blood cell; SCLC = small cell lung cancer.

Online Resource 2. Characteristics of enrolling sites

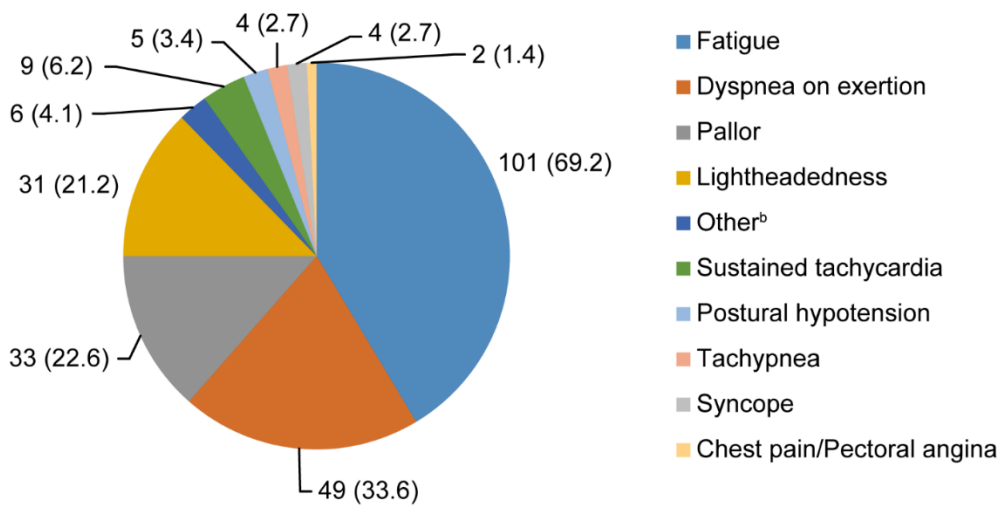

Characteristic	Recruited Study Sites N = 25 n (%)	Study Sites That Enrolled Patients N = 18 n (%)
Location of site		
Urban	11 (44.0)	10 (55.6)
Suburban	10 (40.0)	4 (22.2)
Rural	4 (16.0)	4 (22.2)
Site type		
Academic	2 (8.0)	2 (11.1)
Nonacademic	23 (92.0)	16 (88.9)
Transfusion center on site		
Yes	9 (36.0)	8 (44.4)
No	16 (64.0)	10 (55.6)
Routine usage of erythropoiesis- stimulating agents		
Yes	18 (72.0)	12 (66.7)
No	7 (28.0)	6 (33.3)

Online Resource 3: Proportions of patients with specific signs and symptoms of anemia, and signs and symptoms of anemia affecting the decision to prescribe a PRBC transfusion. Data are shown as n (%). ^aPatients could be included in > 1 symptom category but were included only once within each category. ^bNot specified. ^cOne patient was excluded as the Hb value was measured after a PRBC transfusion. Hb = hemoglobin; PRBC = packed red blood cell.

a. Signs and symptoms of anemia (N = 147)^a

b. Signs and symptoms of anemia affecting the decision to prescribe a PRBC transfusion (N = 146)^{a,c}

Online Resource 4. Primary clinical considerations for prescribing a PRBC transfusion stratified by sex and age

Baseline Covariate / Primary Clinical Consideration for PRBC Transfusion	Patients Who Received a PRBC Transfusion N = 147	
	n (%)	95% CI (%)
Sex		
Female		n = 100
Anemia symptoms	76 (76.0)	66.4, 84.0
Hb value	23 (23.0)	15.2, 32.5
Medical history	1 (1.0)	0.0, 5.4
Male		n = 47
Anemia symptoms	30 (63.8)	48.5, 77.3
Hb value	14 (29.8)	17.3, 44.9
Medical history	3 (6.4)	1.3, 17.5
Age		
< 65 years		n = 66
Anemia symptoms	53 (80.3)	68.7, 89.1
Hb value	12 (18.2)	9.8, 29.6
Medical history	1 (1.5)	0.0, 8.2
≥ 65 years		n = 81
Anemia symptoms	53 (65.4)	54.0, 75.7
Hb value	25 (30.9)	21.1, 42.1
Medical history	3 (3.7)	0.8, 10.4

Physicians selected the “most important (primary) consideration,” “second-most important consideration,” or “least important consideration” from the list of 3 considerations of anemia symptoms, Hb value, or medical history (including comorbidities).

CI = confidence interval; Hb = hemoglobin; PRBC = packed red blood cell.

Online Resource 5. Primary clinical considerations for prescribing a PRBC transfusion by primary tumor type

Baseline Covariate / Primary Clinical Consideration for PRBC Transfusion	Patients Who Received a PRBC Transfusion N = 147	
	n (%)	95% CI (%)
Gynecological cancer		n = 37
Anemia symptoms	26 (70.3)	53.0, 84.1
Hb value	10 (27.0)	13.8, 44.1
Medical history	1 (2.7)	0.1, 14.2
Non-small cell lung cancer		n = 30
Anemia symptoms	23 (76.7)	57.7, 90.1
Hb value	7 (23.3)	9.9, 42.3
Medical history	0	
Small cell lung cancer		n = 24
Anemia symptoms	18 (75.0)	53.3, 90.2
Hb value	5 (20.8)	7.1, 42.2
Medical history	1 (4.2)	0.1, 21.1
Gastrointestinal cancer		n = 10
Anemia symptoms	9 (90.0)	55.5, 99.7
Hb value	1 (10.0)	0.3, 44.5
Medical history	0	
Breast cancer		n = 14
Anemia symptoms	9 (64.3)	35.1, 87.2
Hb value	5 (35.7)	12.8, 64.9
Medical history	0	
Urogenital cancer		n = 7
Anemia symptoms	6 (85.7)	42.1, 99.6
Hb value	0	
Medical history	1 (14.3)	0.4, 57.9
Other ^a		n = 25
Anemia symptoms	15 (60.0)	38.7, 78.9
Hb value	9 (36.0)	18.0, 57.5
Medical history	1 (4.0)	0.1, 20.4

Physicians selected the “most important (primary) consideration,” “second-most important consideration,” or “least important consideration” from the list of 3 considerations of anemia symptoms, Hb value, or medical history (including comorbidities).

^aIncludes bone/sarcoma, brain, head and neck, skin, thyroid, hematological cancers, other gastrointestinal cancers, and missing.

CI = confidence interval; Hb = hemoglobin; PRBC = packed red blood cell.

Online Resource 6. Primary clinical considerations for prescribing a PRBC transfusion by chemotherapy type and line

Baseline Covariate / Primary Clinical Consideration for PRBC Transfusion	Patients Who Received a PRBC Transfusion N = 147	
	n (%)	95% CI (%)
Chemotherapy type		
Platinum		n = 107
Anemia symptoms	79 (73.8)	64.4, 81.9
Hb value	25 (23.4)	15.7, 32.5
Medical history	3 (2.8)	0.6, 8.0
Non-platinum		n = 40
Anemia symptoms	27 (67.5)	50.9, 81.4
Hb value	12 (30.0)	16.6, 46.5
Medical history	1 (2.5)	0.1, 13.2
Chemotherapy line		
First line		n = 95
Anemia symptoms	67 (70.5)	60.3, 79.4
Hb value	26 (27.4)	18.7, 37.5
Medical history	2 (2.1)	0.3, 7.4
Second line		n = 52
Anemia symptoms	39 (75.0)	61.1, 86.0
Hb value	11 (21.2)	11.1, 34.7
Medical history	2 (3.8)	0.5, 13.2

Physicians selected the “most important (primary) consideration,” “second-most important consideration,” or “least important consideration” from the list of 3 considerations of anemia symptoms, Hb value, or medical history (including comorbidities).

CI = confidence interval; Hb = hemoglobin; PRBC = packed red blood cell.

Online Resource 7. Primary clinical considerations for prescribing a PRBC transfusion by site type

Baseline Covariate / Primary Clinical Consideration for PRBC Transfusion	Patients Who Received a PRBC Transfusion N = 147		
	n (%)		95% CI (%)
Academic		n = 40	
Anemia symptoms	30 (75.0)		58.8, 87.3
Hb value	8 (20.0)		9.1, 35.6
Medical history	2 (5.0)		0.6, 16.9
Nonacademic		n = 107	
Anemia symptoms	76 (71.0)		61.5, 79.4
Hb value	29 (27.1)		19.0, 36.6
Medical history	2 (1.9)		0.2, 6.6

Physicians selected the “most important (primary) consideration,” “second-most important consideration,” or “least important consideration” from the list of 3 considerations of anemia symptoms, Hb value, or medical history (including comorbidities).

CI = confidence interval; Hb = hemoglobin; PRBC = packed red blood cell.
