

Tumor cell death after electrotransfer of plasmid DNA is associated with cytosolic DNA sensor upregulation

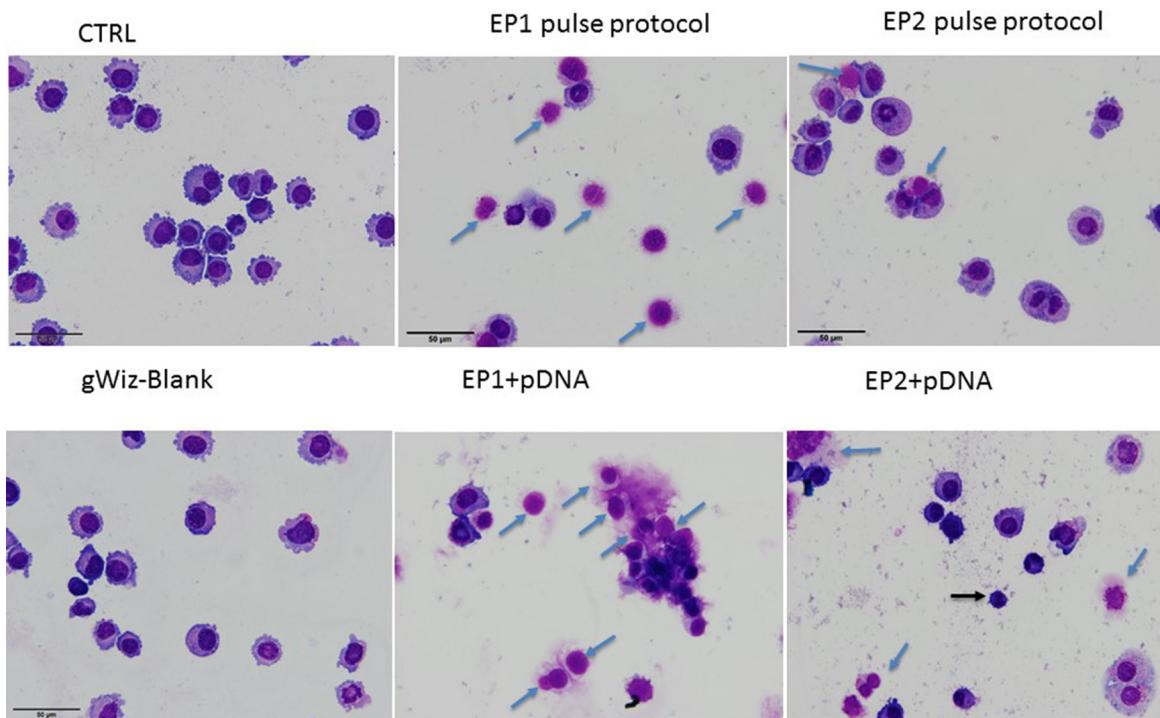

SUPPLEMENTARY MATERIALS

Giems staining 6h after GET of gWiz-Blank into TS/A cell line

Supplementary Figure 1: Morphology of TS/A cell line 6 hours after pDNA electrotransfer. Blue arrows indicate necrotic cells displaying cytoplasmic fragmentation and only an outline of the nucleus.

Giemsa staining 6h after GET of gWiz-Blank into WEHI 164 cell line

Supplementary Figure 2: Morphology of WEHI 164 cell line 6 hours after pDNA electrotransfer. Blue arrows indicate necrotic cells displaying cytoplasmic fragmentation and only an outline of the nucleus. Black arrows indicate apoptotic cells with vacuolization of the cytoplasm and formation of apoptotic bodies.

Supplementary Table 1: RT-PCR Information. See Supplementary_Table_1

Supplementary Table 2: Raw data for ATP leakage assay for TS/A and WEHI 164 cells
