

Figure S1. Comparison of MALDI-TOF mass spectra obtained from phage 3A purified by 500 kDa Pellicon XL 50 ultrafiltration cassette before and after 10 min treatment with β -mercaptoethanol (bME) in 1:10 v/v ratio.

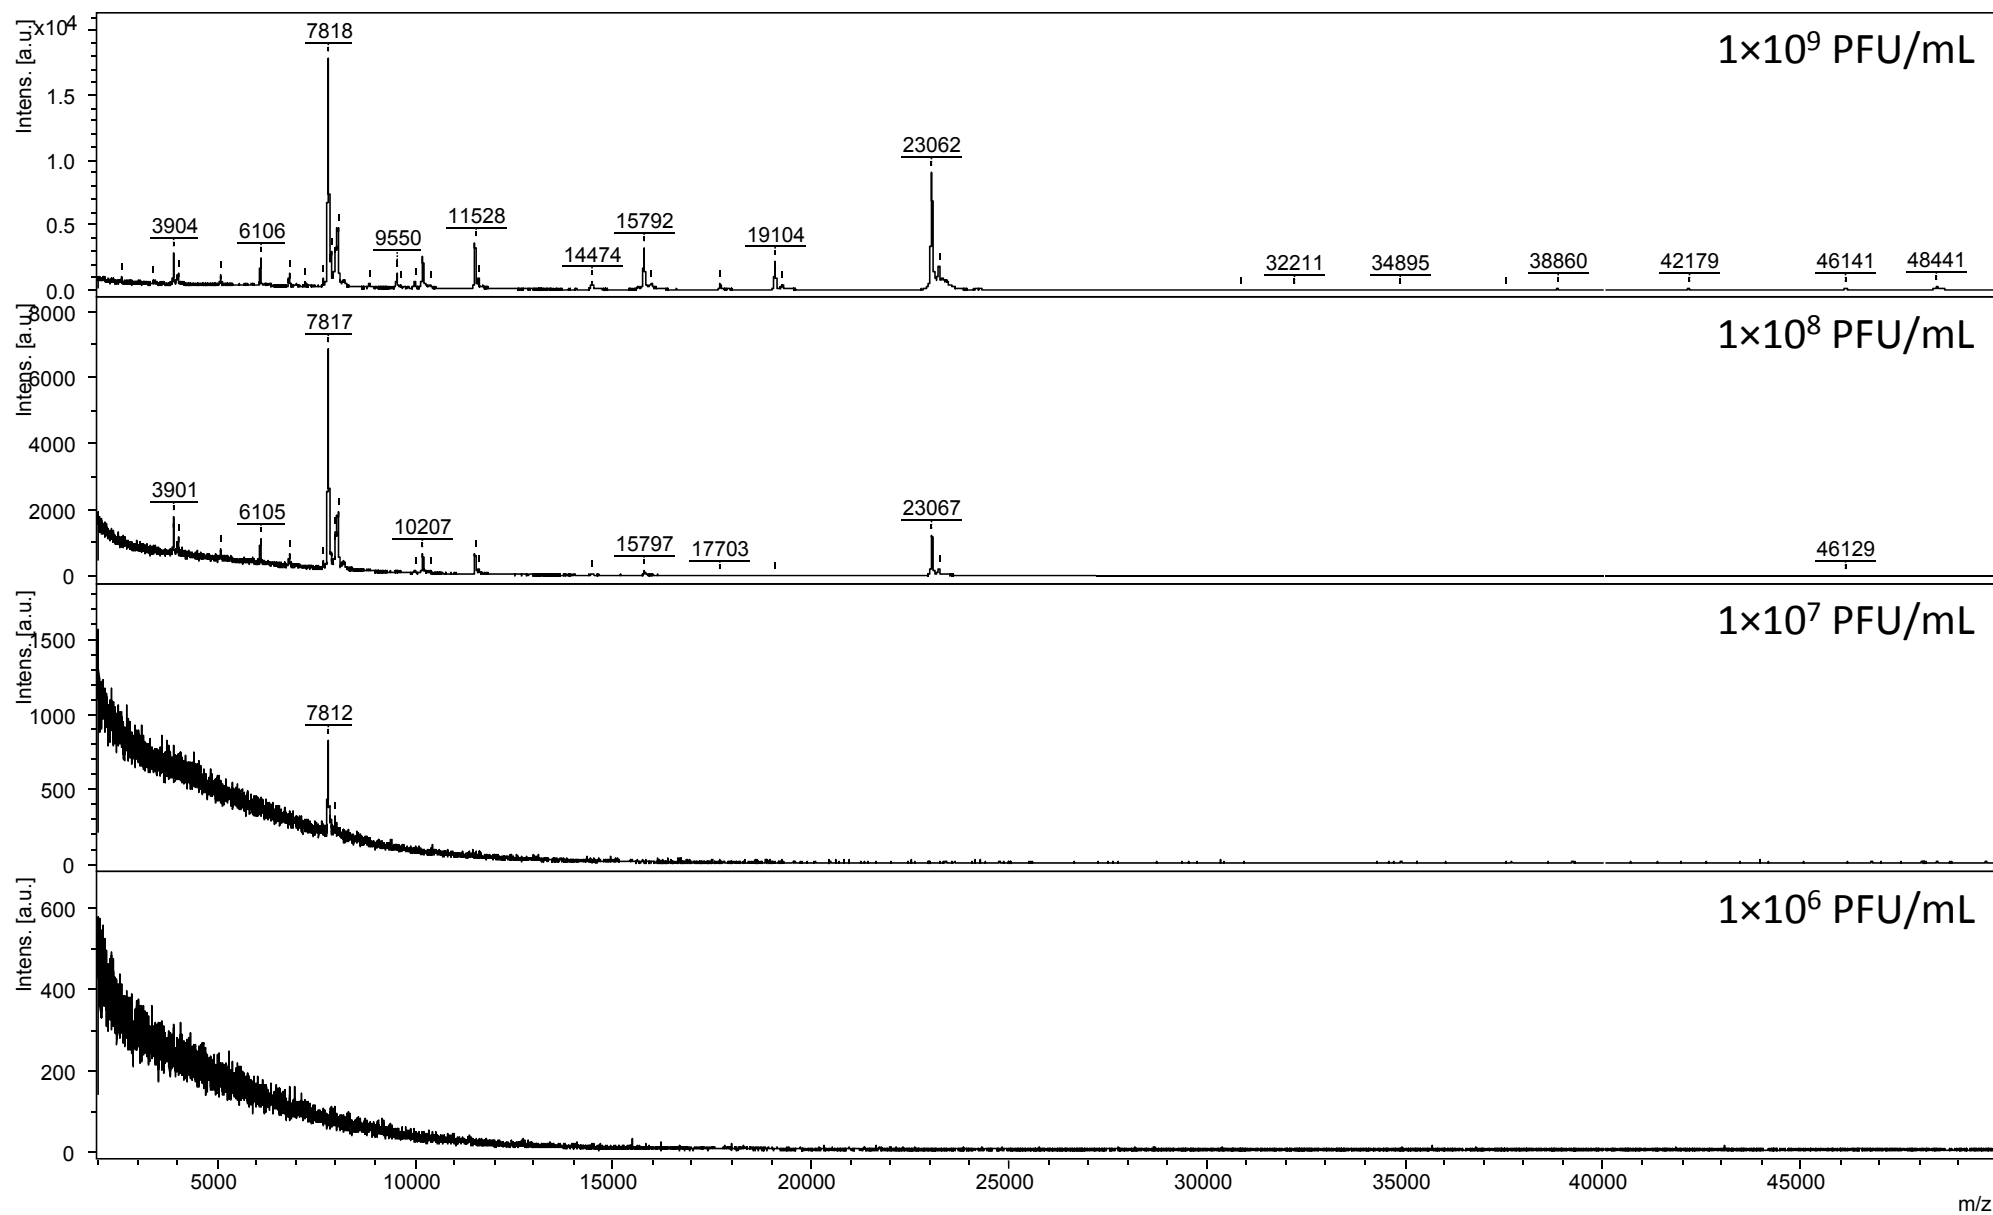

Figure S2. MALDI-TOF mass spectra obtained from series of 10-fold dilutions of CsCl purified *Kayvirus* K1/420 with an initial titer 1x10⁹ PFU/mL.
