^aUT, untypable; RDNC, reacted but did not confirm.

^bSGI1, *Salmonella* genomic island 1; +, presence; —, absence.

^cSGI-3, *Salmonella* genomic island 3; +, presence; —, absence.

^dChromosomal composite transposon; +, presence; —, absence.

^eVirulence-resistance plasmid pYTI; +, presence; —, absence; NA, not applicable due to lack of plasmid contigs.

^fAMP, ampicillin; CFZ, ceftazidime; FOX, ceftiofur; CTX, cefotaxime; FEP, cefepime; CHL, chloramphenicol; STR, streptomycin; KAN, Kanamycin; GEN, gentamicin; SUL, sulfonamide;

TET, tetracycline; SXT, trimethoprim-sulfamethoxazole; NAL, nalidixic acid.

^aLocus tag in reference strain *S. enterica* serovar Typhimurium LT2 (NC_003197.1).^bNucleotide position in reference strain *S. enterica* serovar Typhimurium LT2 (NC_003197.1).^cUnderline and double underline indicate the distinctive SNP of each clade and mismatch nucleotide inserted deliberately, respectively.

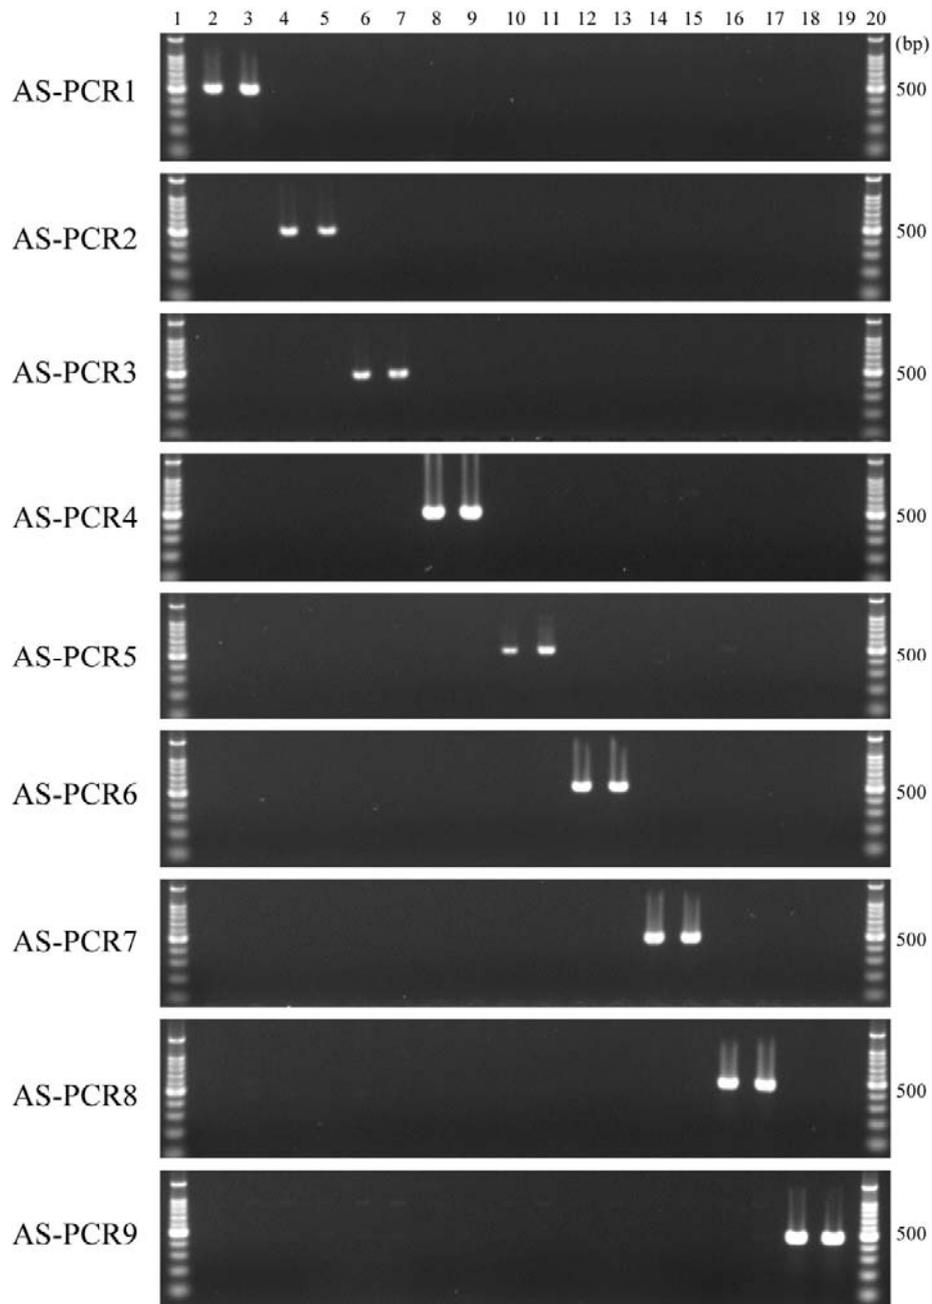

FIG S1 Detection of distinctive SNPs by nine different AS-PCRs. Lanes 1 and 20, 100 bp ladder marker; lanes 2 and 3, clade 1 isolates L-3843 and L-4122; lanes 4 and 5, clade 2 isolates L-4131 and L-4133; lanes 6 and 7, clade 3 isolates L-1995 and L-4156; lanes 8 and 9, clade 4 isolates L-3783 and L-3785; lanes 10 and 11, clade 5 isolates L-3130 and L-4232; lanes 12 and 13, clade 6 isolates L-4124 and L-4125; lanes 14 and 15, clade 7 isolates L-4135 and L-4136; lanes 16 and 17, clade 8 isolates L-4258 and L-4260; and lanes 18 and 19, clade 9 isolates L-4233 and L-4234.

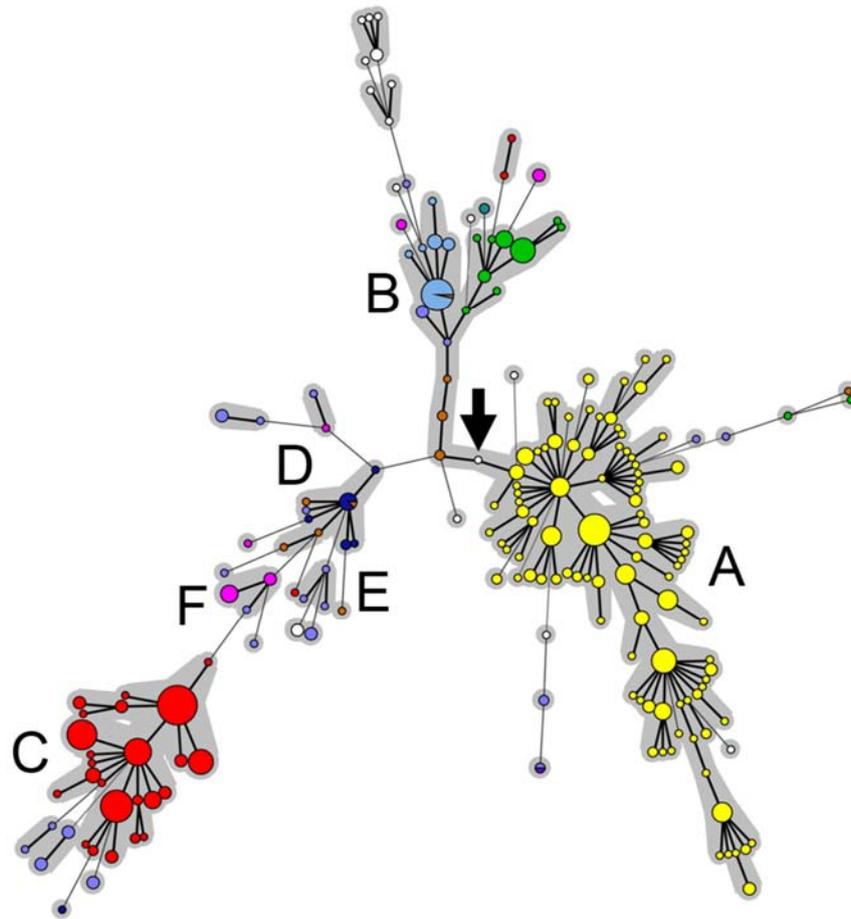

FIG S2 Minimum spanning tree based on the MLVA allelic profiles of *S. enterica* serovar Typhimurium and its monophasic variant. The 21 SNP-untypable isolates are shown as white circles. All but one of these isolates were located outside of the six MLVA clusters (A to F), which were determined in a previous study (Kurosawa et al., 2012). The remaining isolate was located between clusters A and B, as indicated by the black arrow. This analysis was performed as previously described (Kurosawa et al., 2012) using the same 562 isolates and the additional 21 SNP-untypable isolates used in this study.
