**S1. <sup>1</sup>H NMR and chromatographic analyses of fraction 8 (2.1% w/w crude GI extract)**

**a. Comparative <sup>1</sup>H NMR spectra of fractions 8 with its four major isolated compounds**

Stacked NMR spectra (600MHz, DMSO-d<sub>6</sub>)

**b. Semi-preparative chromatogram of fraction 8 after NMR analysis**

Compound	% w/w fr.8
Abyssinone II	4.4
8-prenylapigenin	5.1
Licochalcone C	25.5
Licochalcone A	64.8

**Column:** YMC- Pack ODS AQ (1250 x10 mm ID, S-10 μm, 12 mm AQ12S11-251 OWT) **Gradient:** (B: Acetonitrile, A: Water) 58% B for 40 minutes in isocratic mode. Flow rate at 1.8 ml/min

Both the semi-preparative LC-UV chromatogram and the <sup>1</sup>H NMR spectrum indicated that Licochalcone A and licochalcone C are the most abundant compounds in fraction 8, whereas 8-prenylapigenin is a minor metabolite. Considering the known fraction yield (7.13 mg = 2.1% w/w extract), the proportion of 8-prenylapigenin in fraction 8 was estimated at 5.1% w/w, and, thus, the proportion of **8-prenylapigenin in the crude extract was estimated to be ~ 0.11% w/w.**

d. MS/MS spectrum of verified 8-prenylapigenin

MS/MS spectrum of verified 8-prenylapigenin. The MS/MS spectrum was taken with a CE ramp between 6-50 eV in positive ionization mode.

**Synonym:** 8-prenylapigenin, licoflavone C

**CAS Registry Number:** 72357-31-4

**Pubchem CID:** 10246505

**Molecular Formula:** C<sub>20</sub>H<sub>18</sub>O<sub>5</sub>

**Chemspider ID:** 8421992

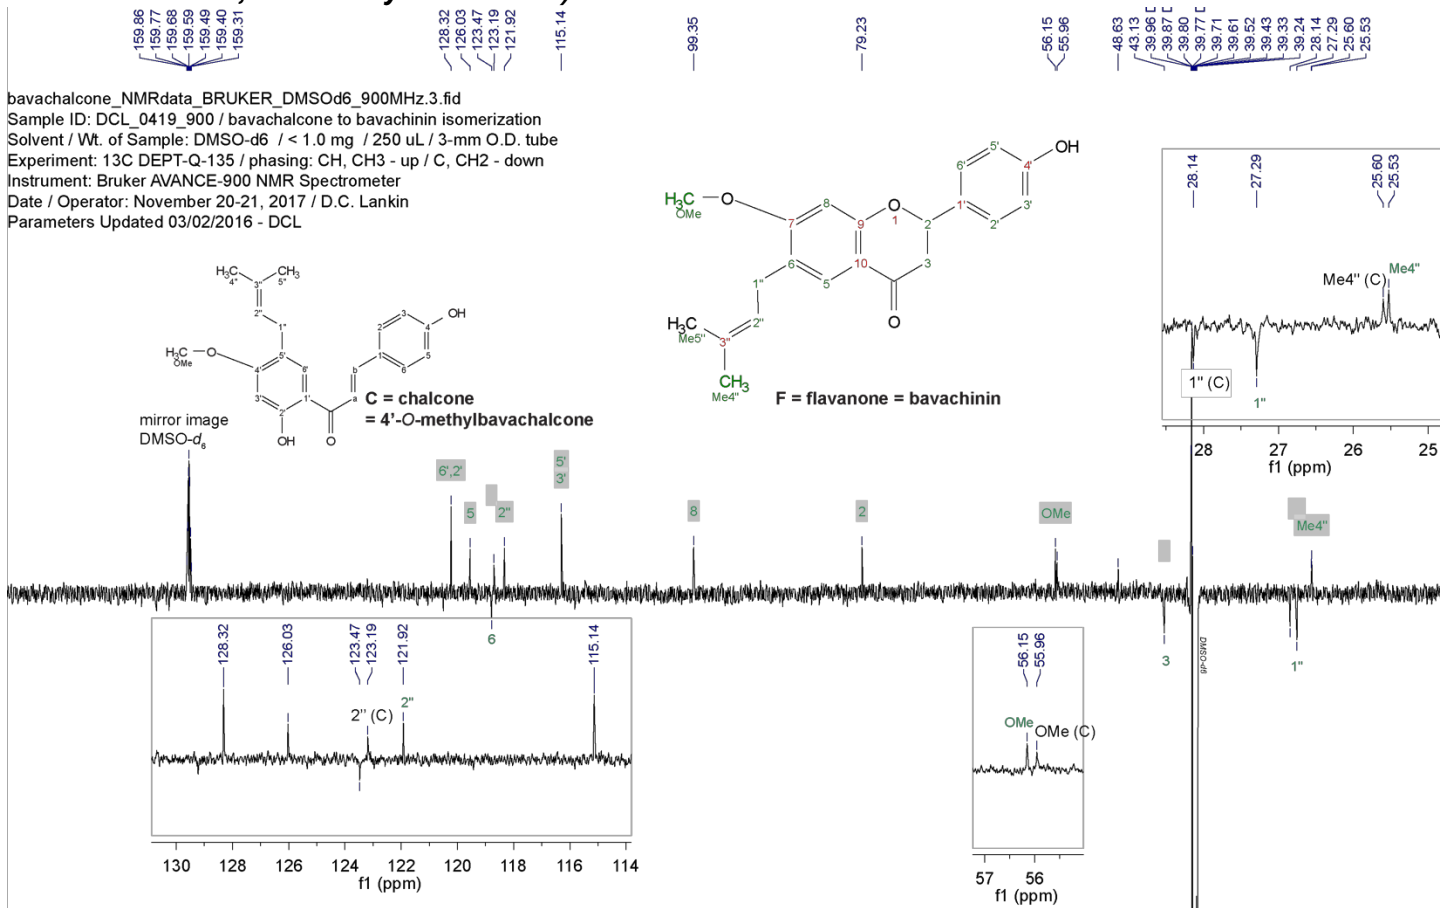

S3. Annotated  $^1\text{H}/^{13}\text{C}$  NMR and MS/MS spectra of 4'-O-methylbavachalcone claimed to be 8-prenylapigenin

a.  $^1\text{H}$  NMR spectra of the sample, acquired at a 2-year interval (DMSO- $d_6$ , 600 and 900MHz)

The results presented here clearly demonstrated the isomerization of the chalcone (C= 4'-O-methylbavachalcone or 4'-O-methylbrousochalcone B) into its flavanone isomer (F = bavachinin, bavachinin A or 7-O-methylbavachinin), occurring in the NMR tube. The  $^{13}\text{C}$  data was acquired using the 2 year-sample and, thus, reflect only the  $^{13}\text{C}$  resonances of the flavanone isomer

**b. Annotated  $^{13}\text{C}$  NMR spectrum (225 MHz) of the 2-year sample containing mainly bavachinin (syn. bavachinin A, 7-O-methylbavachinin)**

**c. Annotated <sup>1</sup>H NMR spectrum (DMSO-d<sub>6</sub>, 600 MHz) of 4'-O-methylbavachalcone (4'-O-methylbrousochalcone B)**

**d. Annotated  $^1\text{H}$  NMR spectrum of bavachinin (DMSO- $d_6$ , 900 MHz)**

e. <sup>1</sup>H and <sup>13</sup>C NMR data of 4'-O-methylbavachalcone and its isomer (DMSO-d<sub>6</sub>, 600 MHz, 225 MHz)

The numbers in brackets are related to bavachinin

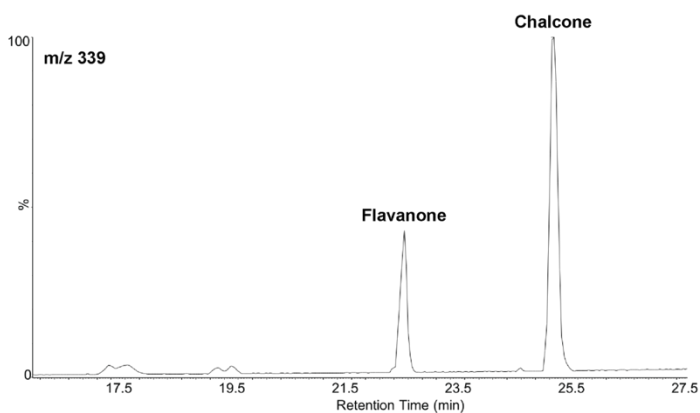

\*Calculated values obtained through full spin analysis using Perch NMR software, in order to obtain the exact coupling constants.

nd=- not detected

<sup>a</sup>determined from the HMBC/HSQC data, <sup>b</sup> and <sup>13</sup>C data for bavachinin.

**f. LC-MS chromatogram of the sample received and MS/MS spectrum of 4'-O-methylbavachalcone**

LC-MS chromatogram

MS/MS Spectrum

LC-MS Chromatogram (left side) and MS/MS spectrum (right side) obtained for the sample claimed to be 8-prenylapigenin. The MS/MS spectrum was taken with a CE ramp between 6-50 eV in positive ionization mode. The extracted ion chromatogram ( $m/z$  339) displayed two peaks with the exact same MS/MS spectra, thereby suggesting the presence of two isomeric forms. F = Flavanone Bavachinin, and C = Chalcone 4'-O-methylbavachalcone, or 4'-O-methylbrousochalcone B.
