

**Supplemental figure 5.** (a) Correlation of plasma MASP-3 levels and urine protein-creatinine ratio (PCR) in patients ( $n=223$ ) with IgA nephropathy. (b) Correlation of plasma M-ficolin with white cell count (WCC) in patients ( $n=108$ ) with IgA nephropathy. (c) Correlation between MBL-associated serine protease (MASP)-3 with alanine aminotransferase (ALT) in patients ( $n=108$ ) with IgA nephropathy.  $P$  values derived from Spearman's rank correlation. CI – confidence interval.
