

Supplementary Figure S11. 5F9.m28BBz CAR-T cells do not kill mGUCY2C-expressing mouse colorectal cancer cells. CT26 cells expressing β -galactosidase and murine GUCY2C (A; CT26.mGUCY2C) or human GUCY2C (B; CT26.hGUCY2C) were cultured for 4 h with a range of effector CAR-T cell : target cancer cell ratios (E:T Ratio). Specific lysis was determined by β -galactosidase release into the supernatant detected by a luminescent substrate. ****, $p < 0.0001$ (Two-way ANOVA).
