

Supplementary Figure S5. Detection of 5F9.m28BBz CAR surface expression. Murine CD8+ T cells transduced with a retrovirus containing a control m28BBz CAR or CAR derived from the 5F9 antibody (5F9.m28BBz) upstream of an IRES-GFP marker were labeled with purified 6xHis-hGUCY2C<sub>ECD</sub> (0-1430 nM) and detected with α5xHis-Alexa-647 conjugate. Flow plots were gated on live CD8+ cells.
