Supplementary Fig. 1. Kaplan-Meier survival curves according to the other meaningful factors associated with overall survivals. A: age (<50 years vs. ≥50 years). B: extent of resection (STR vs. GTR vs. Bx). C: RPA class (III vs. IV vs. V). D: methylation status of MGMT gene promoter (methylated vs. unmethylated). STR, subtotal resection; GTR, gross total resection; Bx, biopsy; RPA, recursive partitioning analysis; MGMT, O6-methyl guanine DNA methyltransferase.
