

Co-culture of MSC and HSPC

**SUPPLEMENTARY FIG. S2.** MSC characteristics. **(A)** Expansion of MSCs cultured in M199 media supplemented with 10% FCS, 1% penicillin–streptomycin, 20 μg/mL ECGF, and 8 IU/mL Heparin in the absence (MSC) or presence (MSC-γ) of IFN-γ (mean–SD;  $n=4$ ). **(B)** Representative images of MSC and MSC-γ during culture expansion and a representative image of a coculture experiment with MSC and HSPC. ECGF, endothelial cell growth factor.
