

S5 Table Average evolutionary distances calculated for the *COI-COII* gene region (711 bp) for 37 *H. obsoletus* haplotypes (excluding the Q, φ and P, and the Israeli G and H derived haplotypes), corrected by applying the HKY+I substitution model. Range values are placed in brackets. N-number of haplotypes within each group; *d1*-average divergence among all sequence pairs; *d2*-average divergence among sequence pairs within host-plant associated groups; *D*-average divergence among sequence pairs between groups.

<i>Hyalesthes obsoletus</i>	N	<i>d1</i>	<i>d2</i>	<i>D</i>			
						1	2
				host-plant associated	haplotype group		
1. <i>ex Convolvulus</i>	12	0.010 (0.000-0.027)	0.004 (0.001-0.009)	-			
2. <i>ex Urtica</i>	17		0.004 (0.001-0.007)	0.004 (0.000-0.009)		-	
3. <i>ex Vitex</i>	6		0.005 (0.001-0.011)	0.018 (0.010-0.025)	0.016 (0.009-0.021)		-
4. <i>ex Crepis</i>	6		0.003 (0.001-0.004)	0.020 (0.014-0.027)	0.018 (0.012-0.025)	0.012 (0.007-0.017)	-
<i>Hyalesthes thracicus</i>	-	-	-	0.038 (0.033-0.043)	0.037 (0.031-0.043)	0.029 (0.025-0.032)	0.029 (0.025-0.032)
