

Supplementary Figure 2. Positive CASPR2 ICC. HEK293 cells were transfected with a mammalian expression vector encoding CASPR2 with the use of Lipofectamine 2000 (Invitrogen, 11668019) and ICC was performed as described in Supplementary Table 5. Commercial antibody staining can be appreciated in green (A), patient's 34 sera positivity in red (B), and a merged picture of both can be found above with nuclei stained in blue (C).
