

A)

COMPETITIVE GROWTH					
	n	L	O	HAATI <sup>rDNA</sup>	HAATI <sup>STE</sup>
<i>trt1Δ</i>	10	0%	0%	100%	0%
<i>dcr1Δ trt1Δ</i>	10	0%	70%	0%	30%
	10	0%	90%	0%	10%
<i>dcr1-ΔCTD trt1Δ</i>	10	0%	90%	0%	10%
<i>dcr1-cd trt1Δ</i>	10	0%	90%	0%	10%

**SUPPLEMENTAL FIGURE S2. Catalytically active Dcr1 is required for its roles in HAATI regulation**

- A) Analysis of survival, as described in Figure 1, in the indicated genetic backgrounds under competitive conditions. 'n' indicates the number of independent populations raised.
- B) Representative examples of WT, *dcr1* $\Delta$ , *dcr1-cd* and *dcr1- $\Delta$ CTD* cells harboring GFP- or mCherry-tagged Taz1 (shown in green). Cultures were imaged using identical exposure conditions for all cell types; images were deconvolved and Z stacks projected into a single image.
- C) Percentage distribution of cells harbouring the indicated number of Taz1 foci according to the relative genotype. N = the number of cells imaged for each genotype. The few cells showing 7 telomere foci are likely victims of the chromosome missegregation seen occasionally in the absence of Dicer function.
