Supplemental Table 4. Descriptive detail illustrating examples of the rationale provided for snacking recommendations by global, regional and national organizations as grouped into similar categories.

Rationale	Example text	Target population group	Sources
Addition of energy and/or nutrients (including fiber)	<p>Snacking can add vitamins, minerals and other nutrients to the diet';</p> <p>'To ensure that everybody receives all the nutrients and other healthful substances their bodies require';</p> <p>'Snacks make a valuable contribution to energy and nutrient intake between main meals';</p> <p>' For many children—particularly those who are quite physically active—snacks can help round out their nutritional requirements and provide as much as one fourth of their calories'</p>	children (n=8); general population (n=11)	(15, 27, 30, 32, 46, 57, 61, 63, 64, 66, 70, 90, 94, 95, 99, 100, 102-104)
Achieving intakes of specific food groups or categories	<p>Most of the snacks should be fruits and vegetables, since most children do not eat the recommended 5 servings of fruits and vegetables each day';</p> <p>'Dairy foods are a great source of calcium, which helps to build strong bones and teeth. Most calcium is obtained from milk and other dairy products. Water should be the main drink served to kids in between meals. Water satisfies thirst and does not have any sugar. Milk provides key nutrients such as calcium and vitamin D. Fresh fruit juices are very healthy and contain lots of vitamin C. Fruit juices are rich in vitamins, minerals and cancer fighting compounds';</p>	children (n=2), general population (n=2)	(27, 102, 104, 105)
Dental Health	<p>To reduce dental decay, restrict the frequency of eating foods and drinking beverages with a high sugar content';</p> <p>'Sugary snacks increase frequency of sugary intake thereby increasing chances of getting tooth decay (dental caries) and obesity';</p> <p>'Choose snacks such as yoghurt and cheese, which are low in fermentable carbohydrate and promote tooth remineralisation';</p> <p>'Avoid cariogenic snacks';</p> <p>'Frequency of snacking on food with high sugar content is related to occurrence of caries';</p> <p>'Less sugar snacks result in less problems with dental caries/tooth decay';</p> <p>'If between meals sweets are enjoyed, then select only tooth friendly confectionery';</p>	children, (n=2), general population (n=10)	(9,32,35,52, 57, 63, 65, 79, 81, 87, 103,105)

Online Supporting Material

Avoidance of choking	Avoid beans, nuts and other snacks which can choke in the trachea'; 'Do not give small, hard foods such as whole nuts and large seeds until children are at least five years old to reduce the risk of choking'	children (n=3),	(23, 63, 102)
Energy & Performance	'Eat meals and snacks at regular intervals to sustain energy levels'; 'If taking part in sport, then a healthy diet, including snacks and drinks, can help to support training and performance'; 'Eating food regularly is also important for anyone who has an active lifestyle through work or exercise'; 'Snacks or light meals help to keep individuals energized throughout the day. It's beneficial in some groups of people, for instance in young children who have small stomachs that can't take all the food they need during main meals'	general (n=4)	(4, 27, 57, 90)
Growth & development	Children need all five meals because of their increased metabolism and relatively small stomach'; 'Older Children: might need 3 snacks: especially during the adolescent growth spurt. Offer children and young people three meals and two to three small snacks during the day to meet their energy and nutrient requirements for growth'; 'It's beneficial in some groups of people, for instance in young children who have small stomachs that can't take all the food they need during main meals'; 'A little child has a small stomach and 3 meals a day may not give him the required energy for his growth and development. Therefore it's very important to feed the child between meals';	children (n=7)	(1, 30, 31, 57, 63, 102, 106)
Body Weight status	'Better weight control'; 'Having small healthy snacks between meals helps in weight loss'; 'How do you maintain correct body weight? Daily food allowance can be taken in 3 - 5 meals; 3 main meals and if necessary 2 healthy snacks in between'; 'Frequent snacking has been linked to rising rates of overweight and obese adults'; 'snacking on junk food: increase in the prevalence of obesity and chronic diseases'	general (n=7)	(27, 57, 62, 67, 80, 81, 105)
Reduce risk of disease	'To reduce the risk of food-related diseases'	general (n=1)	(32)

Online Supporting Material

Glycemic management	'Healthy snacks can help maintain your blood glucose (sugar) levels throughout the day, but these must not replace proper meals'; 'Better control of blood sugar'	general (n=3)	(4, 27, 81)
Rationale for snacks to limit/avoid	'Processed snacks that contain Trans fats and high salt content are possible risk factors for hyperlipidemia and cardiovascular diseases'; 'Benefits of less salty snacks: good control of blood pressure, decreased risk of heart and blood vessel diseases'; 'Benefits of less sugary snacks: better weight control, good control of blood pressure levels; more energy and vitality'; 'Higher energy and fat'; 'To limit intake of oil'	general (n=8)	(9, 13, 35, 42, 67, 79, 82, 108)
Other	'It (snacking) fulfils both nutritional and social needs'; 'Limiting foods and drinks which contain a lot of calories, fat, sugar or salt are important ways to respect your body'; 'A sensible snack ideally consists of local, seasonal products'; 'A sensible snack should be packed, if possible, in a reusable container to keep snacks fresh and save on packaging'; 'Helps keep hunger at bay'; 'Because of their ingredients, ultra-processed foods—such as packaged snacks, soft drinks, and instant noodles—are nutritionally unbalanced'	general (n=5)	(13, 15, 57, 85, 104)
