

Additional file 2

Additional file 2. A representative isobologram of *in vitro* interactions between the respective drugs. (a) paromomycin-suramin against *L. major* promastigotes (5ASKH strain). (b) paromomycin - suramin, (c) netilmicin - suramin against intracellular *L. major* (5ASKH strain) amastigotes and (d) paromomycin – suramin, (e) netilmicin - suramin against intracellular *L. donovani* (AG83 strain) amastigotes. The FICs, calculated and plotted. The bold curve corresponds to the predicted positions of the experimentally determined points for a simple synergistic effect.
