

S6 Fig. Localization of PBPs with respect to FtsZ in methicillin-induced filaments. Filaments expressing FtsZ-Ve (strain NZ3900 [pGIBLD031]) were stained with Bocillin™650/665 and visualized by phase contrast (PC) and epifluorescence (FtsZ-Ve and Bocillin) microscopy. White arrows indicate bands of FtsZ-Ve/PBP co-localization.
