

**Supplementary Fig. 1 The ROC curves of CRP/Alb ratio (categorical) and mGPS (categorical) for survival status in cervical squamous cell cancer.** The comparison of AUC value identified no differences in the discriminatory ability between the CRP/Alb ratio and mGPS ( $p = 0.11$ ).

Variable	AUC	SE <sup>a</sup>	95% CI <sup>b</sup>
CPR_Al	0.653	0.0338	0.582 to 0.719
mGPS	0.585	0.0331	0.513 to 0.654

**Supplementary Fig. 2 Prognostic significance of NLR in cervical cancer patients according to different treatment methods by the Kaplan-Meier method and analyzed by the log-rank test**
