Supplementary Figure 1, continued

B

Supplementary Figure 1. Chromatogram and fragmentation of DMEQ-TAD adducts of vitamin D, 25D, and 24,25D. A) Composite chromatogram of multiple reaction monitoring for vitamin D, 25D, and 24,25D. B) Mass spectra for DMEQ-TAD adducts of vitamin D ($730.5\rightarrow468.2$), 25D ($746.5\rightarrow468.2$), and 24,25D ($762.5\rightarrow468.2$), indicating that $m/z=468.2$ is the major fragment of vitamin D, 25D, and 24,25D ions, and $m/z=247.1$ is the fragment of DMEQ-TAD

Supplementary Figure 2. Abx treatment induced *cyp24a1* expression in the colon. Expression of mRNA for *cyp24a1*, *cyp27b1*, and *vdr* in the A) kidney and B) colon. C) Expression of *cyp2r1* and *cyp27a1* in the liver. Values are expressed as fold change of the water group. Values are the mean \pm SEM of a mix of male and female mice in the ($n=5$) water group, and $n=13-14$ in the Abx group. Mann-Whitney test was used to test significance.
