

Figure S1 – Parasitemia levels after oral administration of E1224 or benznidazole in monotherapy or combination. Parasitemia curve obtained from mice infected with 5000 trypomastigotes of *T. cruzi* Colombian strain and treated daily with 50 or 37.5 mg/kg of E1224 and 100 or 75 mg/kg of benznidazole alone or in combination for 20 consecutive days. Treatments were started at day 4 of infection. The graph inset shows parasitemia curve only of the treated groups after the treatment period.
