

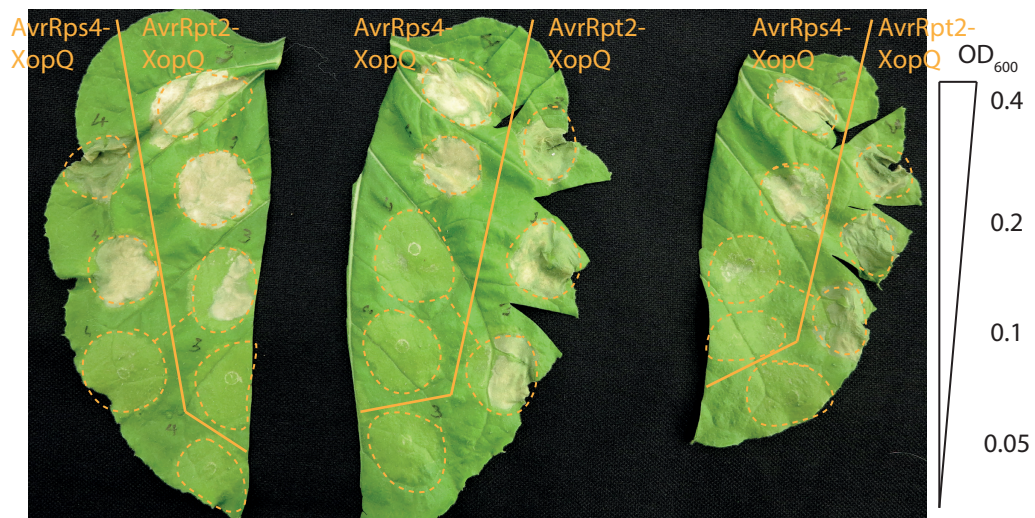

Figure S2 Gantner et al.

Supplemental Figure S2: Enhanced hypersensitive response induction by AvrRpt2-XopQ fusions.

Pseudomonas fluorescens strains translocating either AvrRpt2₁₋₁₀₀-XopQ or AvrRps4₁₋₁₃₄-XopQ fusions were inoculated into wild type *N. benthamiana* plants, and symptom formation was documented 3 dpi. Four different bacterial densities, ranging from OD₆₀₀=0.4-0.05 were used, and were infiltrated descendingly in the indicated leaf sections.
