

Supplemental data

Figure S1 Separation of the guanidinium chloride insoluble mucins by SDS-PAGE (small proteins).

Protein were detected by (A) Coomassie blue, (B) anti-MUC2, (C) WGA, (D) Alcian blue staining. The Coomassie blue staining shows the total proteins in the samples. 1- HiMark protein standard (Invitrogen, Thermo Fisher Scientific), 2-Fetuin (glycoprotein control), 3- BSA (glycosylation negative control), 4-WT SI Muc2, 5-*C3GnT*^{-/-} SI Muc2, 6- WT colon Muc2, 7- *C3GnT*^{-/-} colon Muc2, 8-pPGM, 9- LS174T MUC2

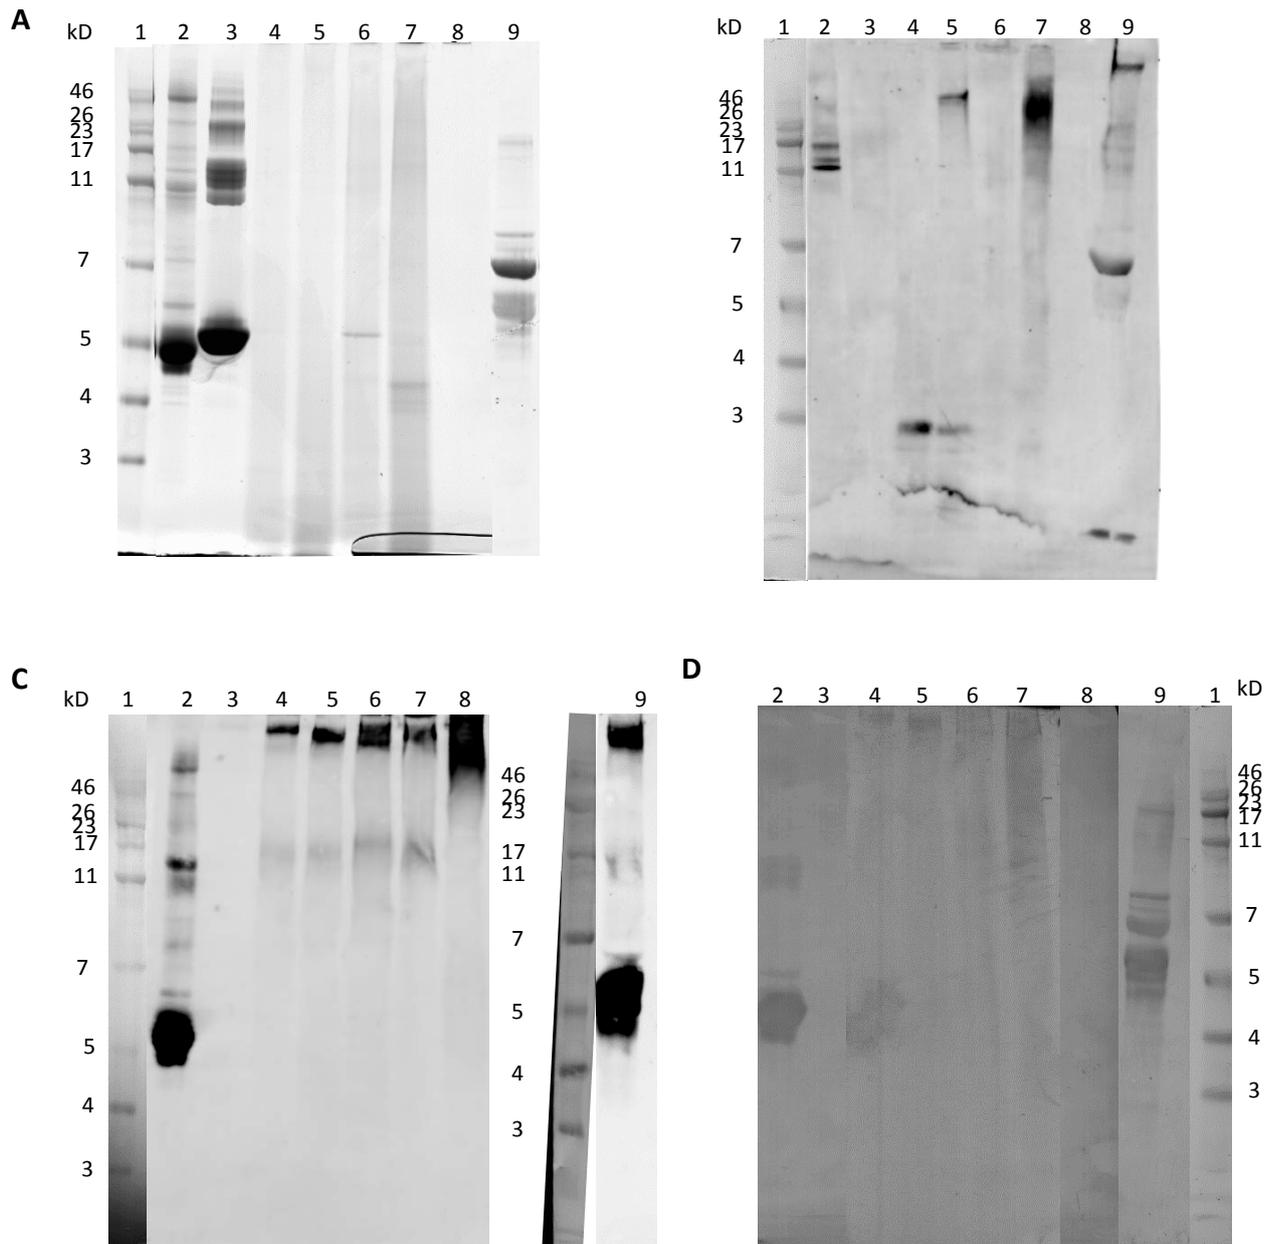

Figure S2 Separation of the guanidinium chloride insoluble mucins by VAGE (high molecular weight proteins). Proteins were detected by (A) anti-MUC2, (B) WGA, (C) Alcian blue staining. 1- HiMark protein standard, 2-Fetuin (glycoprotein control), 3- BSA (glycosylation negative control), 4-WT SI Muc2, 5-*C3GnT*^{-/-} SI Muc2, 6- WT colon Muc2, 7- *C3GnT*^{-/-} colon Muc2, 8-pPGM, 9- LS174T MUC2

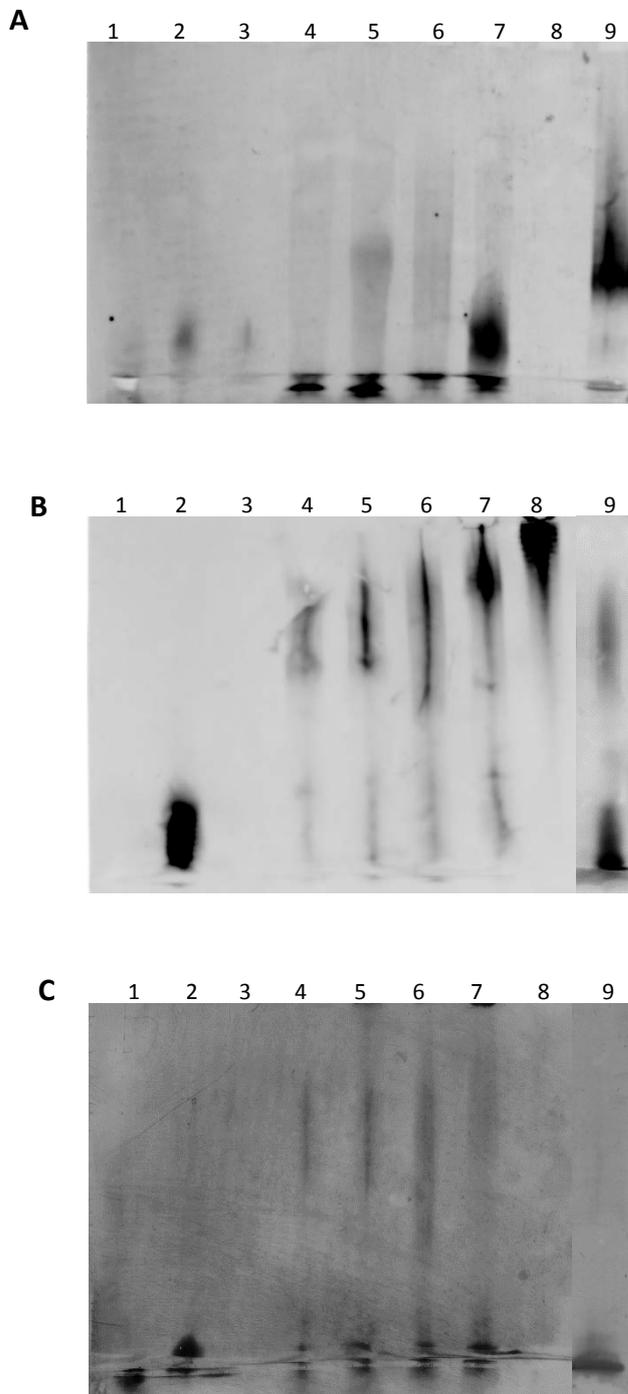

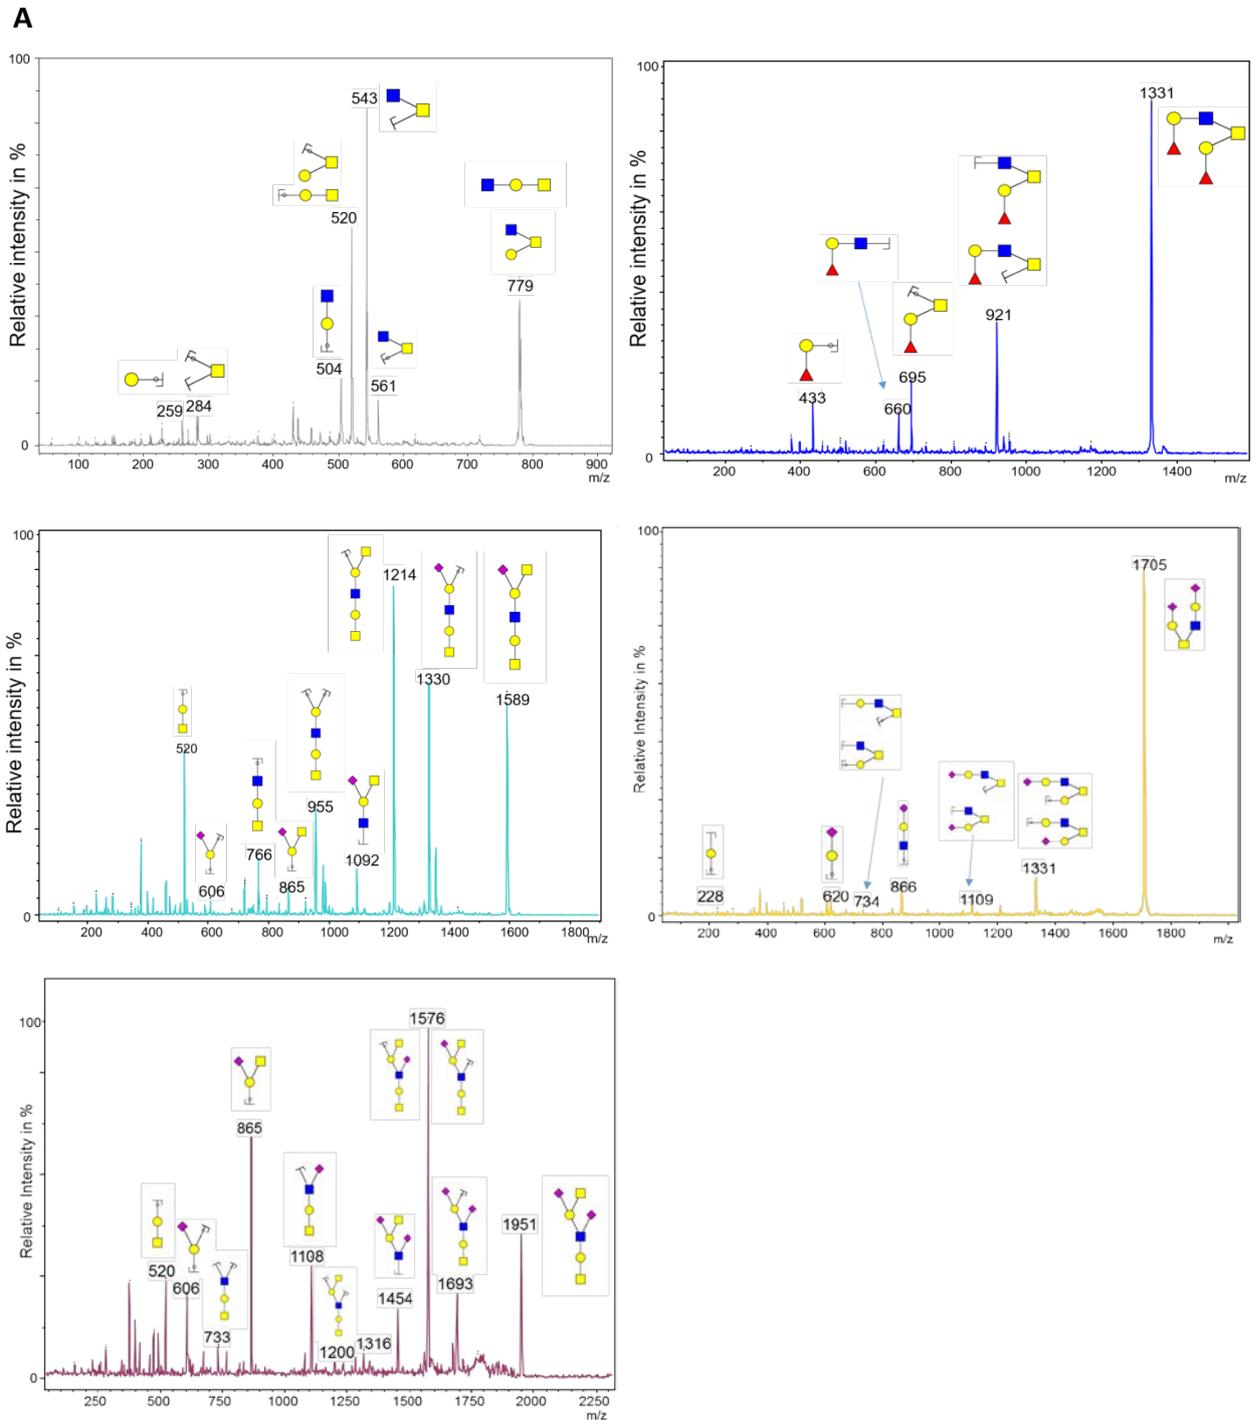

Figure S3 MS/MS spectra of *O*-glycans from mice *Muc2*.

O-glycans were fragmented in positive mode from (A) colon WT and *C3GnT*^{-/-} mice and (B) from small intestine WT and *C3GnT*^{-/-} mice. Monosaccharide symbols follow the Symbol Nomenclature for Glycans (SNFG) system (1). Key: fucose (red triangle), GlcNAc (blue square), sialic acid (purple diamond), galactose (yellow circle) and HexNAc (off-white square).

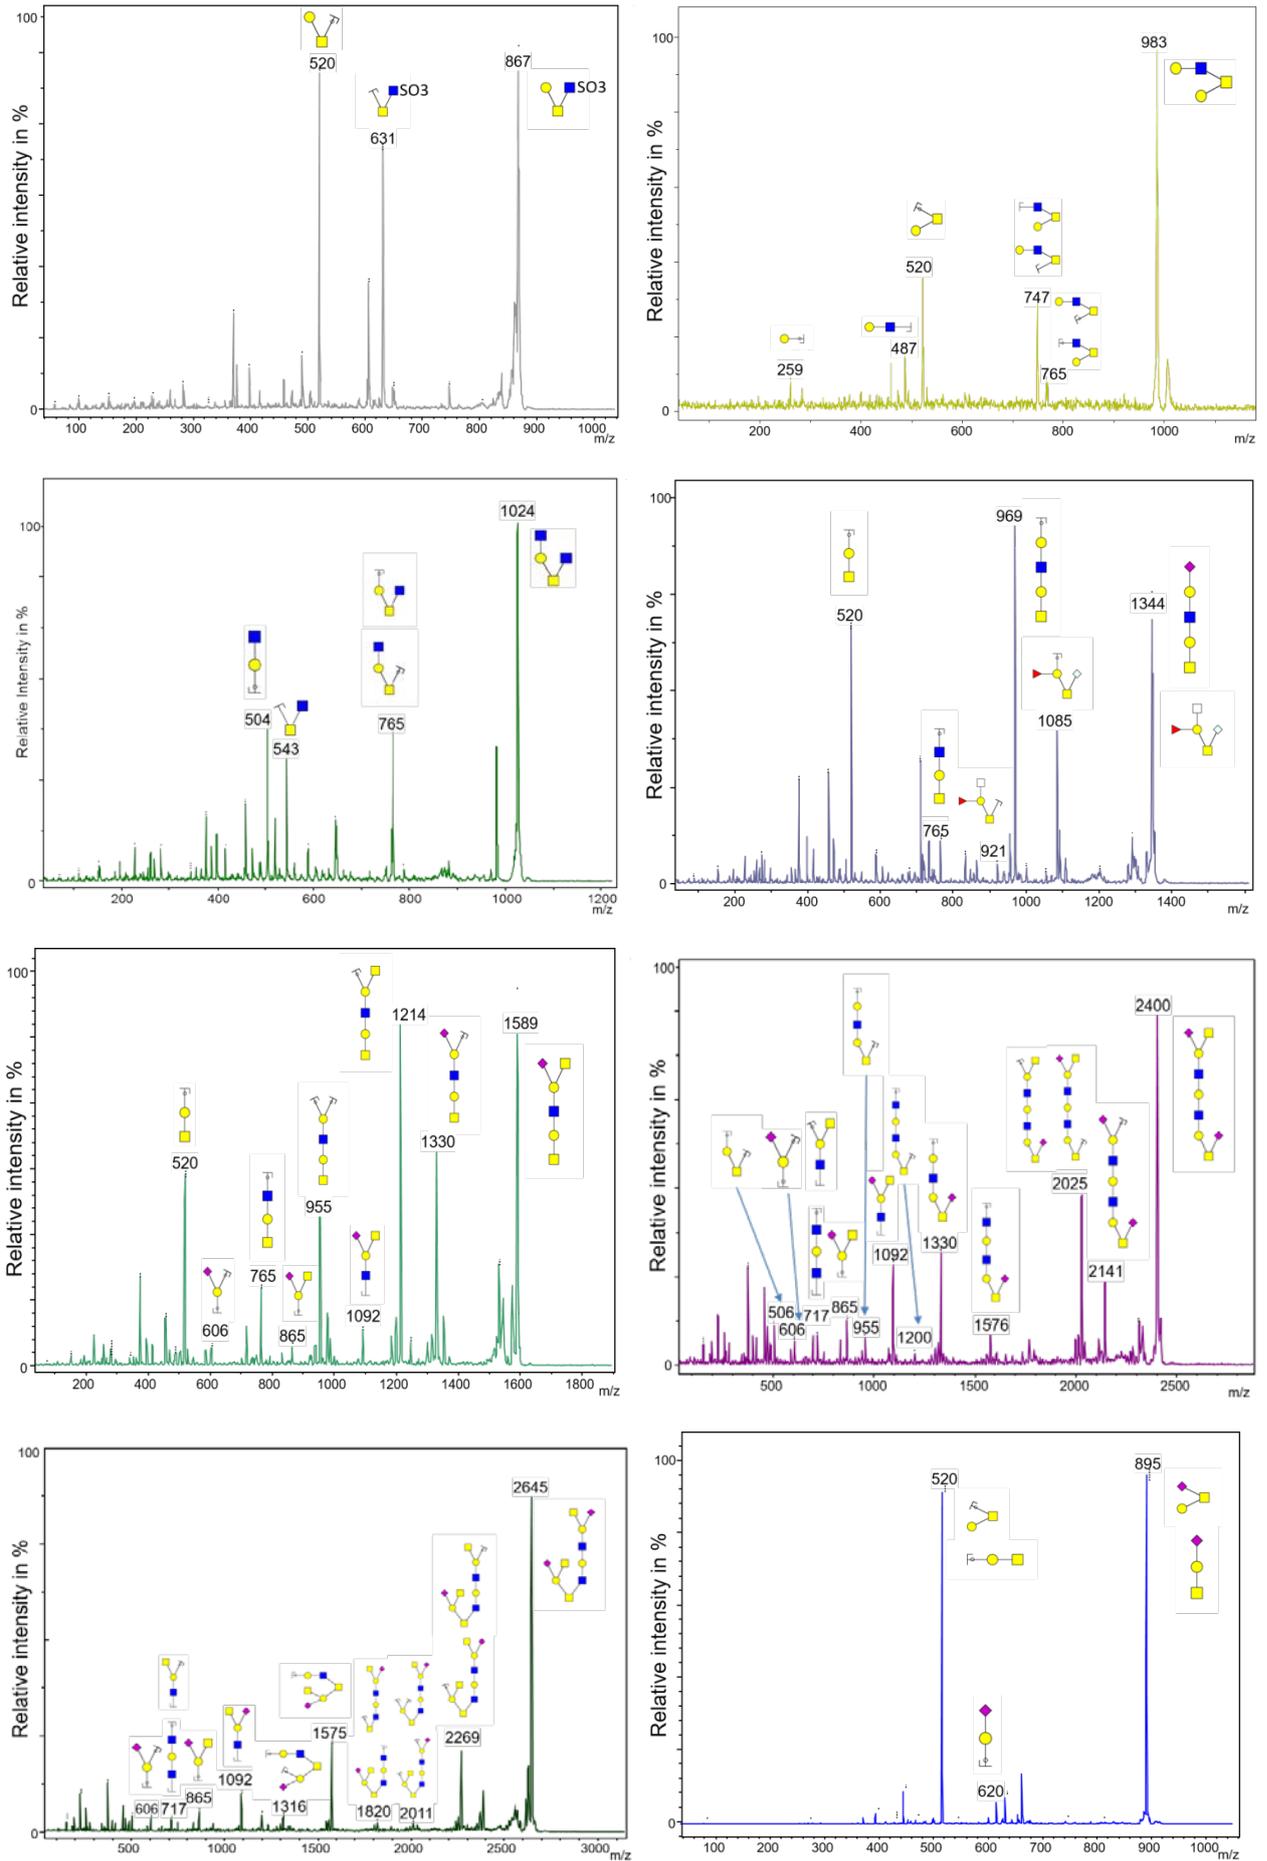

B

Figure S4 Structural characterisation of pPGM *O*-glycan structures after deglycosylation cycles

MALDI-MS spectra, acquired in the positive ion mode $[M + Na]^+$ of permethylated *O*-glycans from pPGM after (A) one cycle of deglycosylation and (B) two cycles of deglycosylation. (C) shows a histogram of the different *O*-glycans found on pPGM after several cycles of deglycosylation. The proportion of each *O*-glycan is relative to other species in a sample Monosaccharide symbols follow the Symbol Nomenclature for Glycans (SNFG) system (1). Key: fucose (red triangle), GlcNAc (blue square), sialic acid (purple diamond), N-glycolyl sialic acid (light blue diamond), galactose (yellow circle), and HexNAc (off-white square).

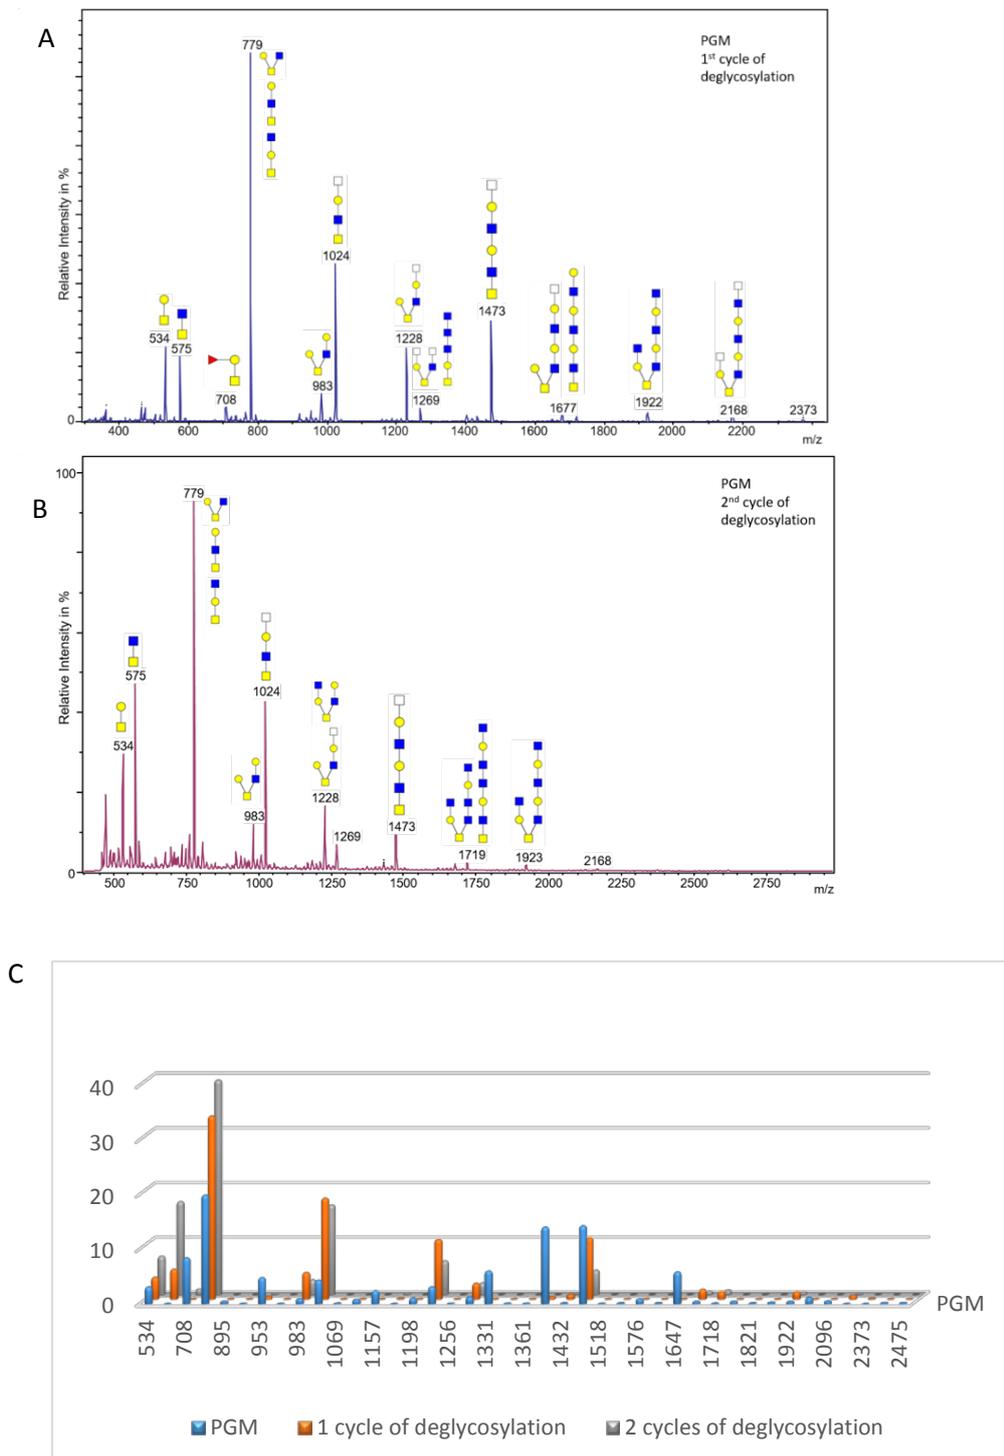

Figure S5 Force spectra histograms of adhesion between human C-type lectins and mucin. Interaction between WT colonic Muc2 and (A) hDectin-1, (B) hDectin-2, (C) DC-SIGN in presence or absence of potential inhibitors.

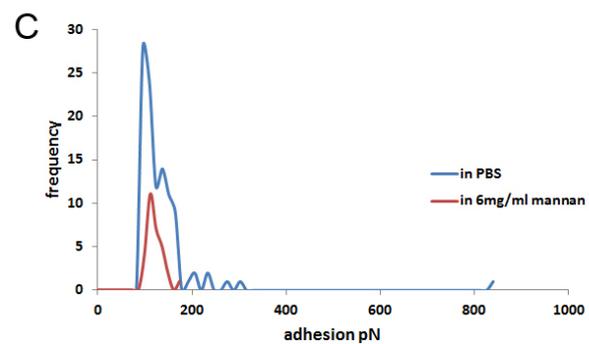

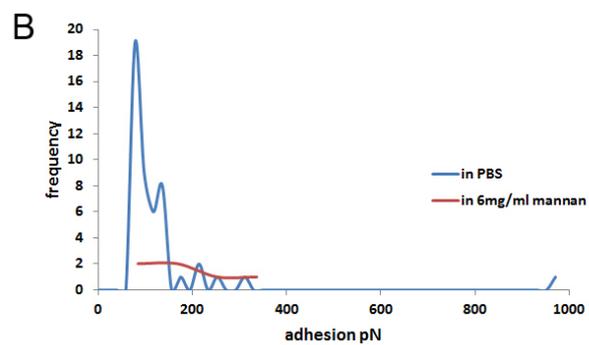

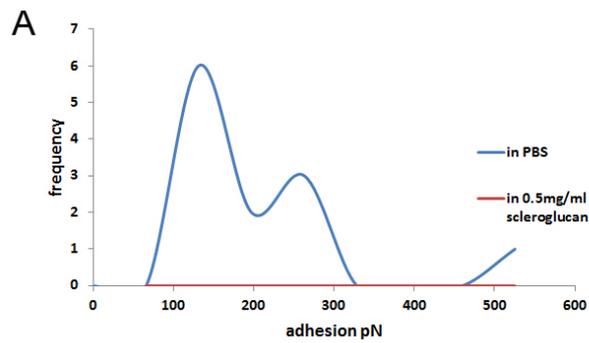

Figure S6: MS/MS spectra of *N*-glycans from mDectin-2.

MS/MS spectra of parent ion at $m/z=2652$; 3275 and 3305 fragmented in positive mode. Monosaccharide symbols follow the Symbol Nomenclature for Glycans (SNFG) system (1). Key: fucose (red triangle), GlcNAc (blue square), sialic acid (purple diamond), galactose (yellow circle) and HexNAc (off-white square).

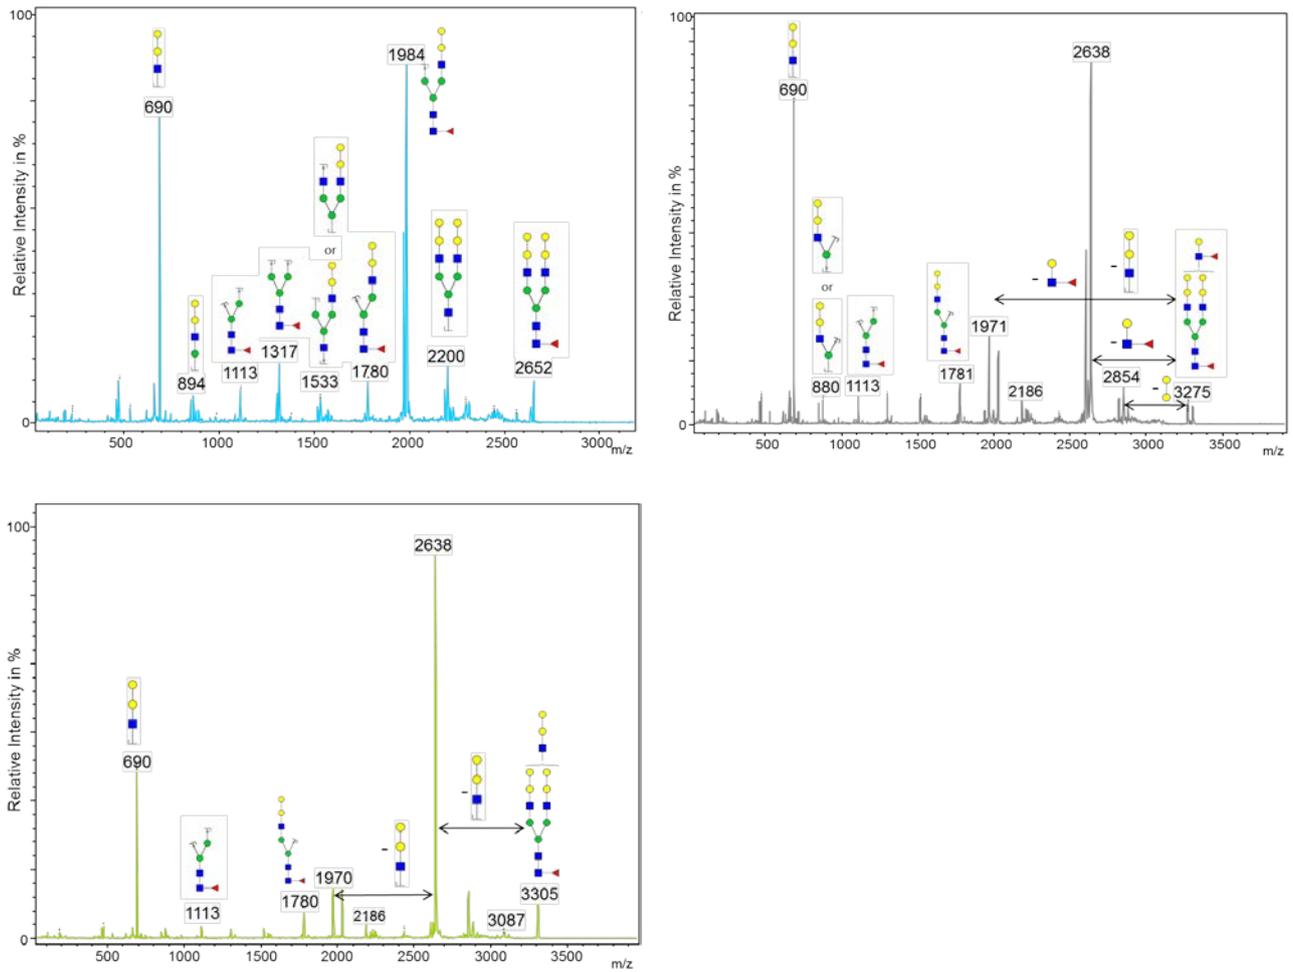

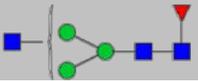

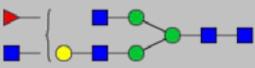

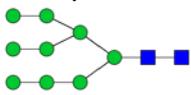

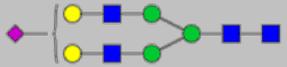

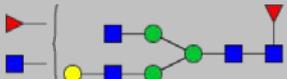

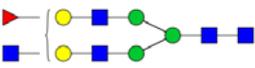

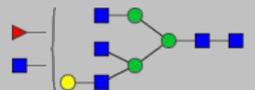

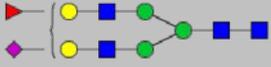

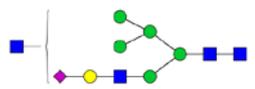

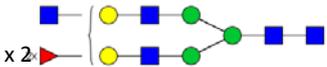

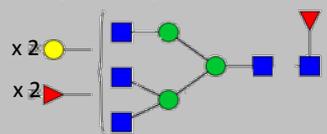

Table S1 Proposed pPGM O-glycan structures after deglycosylation cycles. Quantification through the relative percentage of each oligosaccharide was calculated based on integration of peaks on MS spectra.

Table S2 Proposed oligosaccharide structures of colonic WT and *C3GnT*^{-/-} Muc2 N-glycans. Reduced and alkylated mucins were digested by trypsin and then treated by PNGase F to release N-glycans. Quantification through the relative percentage of each oligosaccharide was calculated based on the integration of peaks from the MS spectra.
